Appendix 126

EXECUTIVE SUMMARY

This Solvency and Financial Condition Report (SFCR) has been prepared for the Allianz Group based on §§ 40, 277 of the German Insurance Supervisory Act (VAG, transposing Articles 51 and 256 of the Directive 2009/138/EC), chapter XII of Title I and chapter V of Title II of the Delegated Regulation (EU) 2015/35, and the Guidelines on reporting and public disclosure EIOPA-BoS-15/109.

The structure of this report follows Annex XX of the Delegated Regulation (EU) 2015/35 and covers the financial year 2024. The Allianz Group's consolidated financial statements and market value balance sheet (MVBS) as of 31 December 2024 were prepared and approved by the Board of Management of Allianz SE on 3 March 2025.

All amounts in this report are presented in thousands of euro (€ thou), in line with Article 2 of the Regulation (EU) 2015/2452. Due to rounding, numbers presented may not add up precisely to the totals provided and percentages may not precisely reflect the absolute figures.

We use "ESG" (Environmental, Social, and Governance) and "sustainability" interchangeably, depending on the context.

Information is provided in a level of detail sufficient to allow the reader to obtain a comprehensive view of the solvency and financial condition of the Allianz Group and addresses the following topics:

A. Business and Performance

The Allianz Group offers property-casualty insurance, life/health insurance, and asset management products and services in over 70 countries, with the largest of our operations located in Europe. This chapter offers an overview of the Group and its structure. It then provides an analysis of the underwriting performance of our Non-Life and Life insurance segments – € 4,908,027 thou and € 5,505,106 thou, respectively – including material geographic areas and lines of business, followed by an analysis of our total investment result of € 35,949,239 thou. The performance of our Asset Management and Corporate and Other business segments is also covered where material.

B. System of Governance

This chapter describes the roles, functions, and responsibilities of our two-tier board system (Board of Management and Supervisory Board) as well as the internal control and policy framework. In general, the application of our corporate rules framework is governed by the principles of proportionality and materiality, with specific cases evaluated based on sound business judgment. In the section "Fit and Proper Requirements", we describe our specific requirements concerning skills, knowledge, and expertise of our key function holders. The Allianz Group has set up a comprehensive risk management framework, which is described in detail, including our risk strategy, governance structure, monitoring and reporting procedures, and an overview of the Own Risk and Solvency Assessment (ORSA) process. The chapter concludes with descriptions of how our Internal Control System, Internal Audit function, Actuarial function, and outsourcing are implemented.

C. Risk Profile

Risk is measured and steered based on an approved Group internal model¹. The resulting risk profile provides an overview of how risks are distributed over different risk categories and determines the regulatory capital requirements in accordance with Solvency II. This chapter provides an overview of the risk categories contributing to our Solvency Capital Requirement (SCR) of € 44,703,373 thou. We provide qualitative and quantitative information on risk exposures, concentrations, mitigation, and sensitivities for the following risk categories: underwriting, market, credit, liquidity, operational, and other material risks.

D. Valuation for Solvency Purposes

This chapter provides information on the MVBS and a comparison of MVBS and statutory figures, which are based on IFRS at the Group level. We provide a quantitative and qualitative explanation for material differences in the valuation of assets, technical provisions, and other liabilities, including the main differences between the bases, methods, and main assumptions used.

E. Capital Management

We provide information on our Group's Own Funds, including a quantitative and qualitative description of material differences in the excess of assets over liabilities, as calculated for the financial statements and for Solvency II purposes, including information on the structure of basic Own Funds and the tiering of eligible Own Funds. Eligible Own Funds (including Own Funds from other financial sectors and from undertakings included in the Group solvency figures, using the deduction and aggregation method) amounted to € 93,212,185 thou. This chapter also explains the main differences between the underlying assumptions of the standard formula and our internal model used to calculate our Group Solvency Capital Requirement, as well as any other relevant information.

In terms of Solvency II regulatory capitalization, our capitalization ratio as of 31 December 2024 was 209%. The application of transitional measures for technical provisions has no impact on the Solvency II capitalization ratio as of 31 December 2024.

Given our level of capitalization as well as the stress tests conducted, there is currently no indication of the Allianz Group's non-compliance with its Solvency Capital Requirement or minimum consolidated Group Solvency Capital Requirement.

We are managing our portfolios to ensure that the Group and its entities have sufficient resources to meet their solvency capital needs.

There were no material changes to our business and performance, System of Governance, risk profile, valuation for solvency purposes, and capital management over the reporting period.

¹The Group internal model is a partial model as its scope does not include all related undertakings of Allianz SE (but all quantifiable risk categories). Some of our smaller insurance entities report under the

standard formula and others apply third country equivalence. For asset management, banking and Institutions for Occupational Retirement Provision (IORP), sectoral requirements are applied.

BUSINESS AND PERFORMANCE

A.1 BUSINESS

A.1.1 Business operations

Allianz SE and its subsidiaries (the Allianz Group) offer property-casualty¹ insurance, life/health² insurance, and asset management products and services in almost 70 countries, with the largest of our operations located in Europe. The Allianz Group serves around 128 million private and corporate customers³.

Allianz SE is headquartered in Munich, Germany, and has the legal form of a European Company (Societas Europaea). Allianz SE, the parent company of the Group, also acts as a reinsurer, providing reinsurance coverage, in particular to Group companies.

A.1.1.1 Insurance operations

We offer a wide range of property-casualty and life/health insurance products to both retail and corporate customers. For the Property-Casualty business segment, these include motor, accident, property, general liability, travel insurances, and assistance services. The Life/Health business segment offers savings and investment-oriented products in addition to life and health insurance. We are the leading property-casualty insurer worldwide and rank among the top five in the life/health insurance business⁴. Our key markets (in terms of premiums) are Asia, Germany, France, Italy, and the United States.

Most of our insurance markets are served by local Allianz companies. However, some business lines – such as Allianz Global Corporate & Specialty (AGCS), Allianz Partners (AP), and Allianz Trade – are run globally.

A.1.1.2 Asset Management

Our two major asset management entities, PIMCO and AllianzGI, operate under the governance of Allianz Asset Management (AAM). We are one of the leading global asset managers that actively manages assets. Our offerings cover a wide range of equity, fixed income, cash, and multi-assets products as well as a strongly growing number of alternative investment products, such as real estate, infrastructure debt/equity, real assets, liquid alternatives, and solution business. Our core markets are the United States, Canada, Germany, France, Italy, the United Kingdom, and the Asia-Pacific region.

1_Property-Casualty is also referred to as Non-Life.
2_Life/Health is also referred to as Life.

A.1.1.3 Corporate and Other

The Corporate and Other business segment's activities include the management and support of the Allianz Group's businesses through its central Holding functions, Banking as well as Alternative and Digital Investments. The Holding functions manage and support the Group's businesses through its strategy, risk, corporate finance, treasury, financial reporting, controlling, communication, legal, human resources, technology, and other functions.

A.1.2 Group structure

For information on the governance and organizational structure of the Group, please refer to chapter "B System of Governance".

A simplified overview of the Allianz Group structure as of 31 December 2024 can be found in the Appendix to this report.

A.1.2.1 Group holdings

A list of all subsidiaries and related undertakings of the Allianz Group, along with details on their business activities, size, regulation status, and information as to whether they use an internal model, can be found in the Qualitative Reporting Template (QRT) S.32.01.22 in the Appendix to this report.

The Allianz Group does not have any branches considered material according to Article 354 (1) of the Delegated Regulation (EU) 2015/35.

A.1.2.2 Interest in the share capital exceeding 10% of the voting rights

Allianz SE is not aware of any direct or indirect interests in the share capital that exceed 10% of the voting rights.

3_Including non-consolidated entities with Allianz customers.

A.1.3 Significant business and other events

A.1.3.1 Significant changes in the scope of consolidation

Significant business combinations in 2024

TUA Assicurazioni S.p.A., Italy

On 1 March 2024, the Allianz Group completed the acquisition of 99.99% of the shares of TUA Assicurazioni S.p.A., Italy, a non-life insurance business to consolidate the Allianz Group's position as a leading insurer in the Italian property-casualty market. The Allianz Group recognized identifiable assets acquired and liabilities assumed of € 651 mn and € 468 mn, respectively. Expected substantial cost synergies through the use of the business platforms of Allianz Italy and leveraging economies of scale on central functions are the main factors that make up the goodwill recognized at an amount of € 98 mn and allocated to the CGU Property-Casualty Insurance Western & Southern Europe.

Significant changes in non-controlling interests

In 2024, no significant changes in non-controlling interests occurred.

Classification as held for sale

Unicredit Allianz Vita S.p.A.

On 24 September 2024, UniCredit exercised its option to purchase Allianz Group's 50% share in one joint venture entity it had established with Allianz in Italy. Pending receipt of regulatory approvals, the sale is expected to be completed in the second quarter of 2025. The assets and liabilities of Unicredit Allianz Vita S.p.A. classified as held for sale are allocated to the reportable segment Western & Southern Europe (Life/Health).

4_Based on currently available peer data. Allianz has defined a group of comparable peers with a similar business mix and global footprint, which includes AIG, AXA, Chubb, Generali, and Zurich.

Allianz Saudi Arabia

On 17 April 2024, the Allianz Group completed the sale of its 51% stake in Allianz Saudi Fransi to Abu Dhabi National Insurance Company (ADNIC). The assets and liabilities of Allianz Saudi Fransi classified as held for sale were allocated to the reportable segment Global Insurance Lines, Anglo Markets, Iberia, Latin America, Africa (Property-Casualty and Life/Health).

Euler Hermes Re S.A., Luxembourg

On 20 June 2024, the Allianz Group completed the sale of its 100% stake in Euler Hermes Re S.A., Luxembourg, to a Luxembourg captive reinsurance company. The assets and liabilities of Euler Hermes Re S.A. classified as held for sale were allocated to the reportable segment Global Insurance Lines, Anglo Markets, Iberia, Latin America, Africa (Property-Casualty).

A.1.3.2 Recent organizational changes

Only minor reallocations between the reportable segments have been made.

A.1.4 Further information**A.1.4.1 Group supervisor**

Responsibility for the financial supervision of the Allianz Group lies with the German Federal Financial Supervisory Authority ("Bundesanstalt für Finanzdienstleistungsaufsicht" – BaFin), which is also the coordinator appointed from amongst the competent authorities involved in the supervision of financial conglomerates. The contact information is as follows:

Address of the Bundesanstalt für
Finanzdienstleistungsaufsicht:
Graurheindorfer Str. 108
53117 Bonn

or:
Postfach 1253
53002 Bonn

Contact information for the Bundesanstalt für
Finanzdienstleistungsaufsicht:

Phone: +49.228.4108-0
Fax: +49.228.4108-1550
Email: poststelle@bafin.de or
De-Mail: poststelle@bafin.de-mail.de

A.1.4.2 Group auditor

The Allianz Group's consolidated financial statements, the respective Group management report and our solvency statement as of 31 December 2024 have been audited by PricewaterhouseCoopers GmbH Wirtschaftsprüfungsgesellschaft (PwC). PwC issued an "unqualified auditor's opinion" on 3 March 2025 on the day when the Group's consolidated financial statements, the Group management report and the solvency statement were prepared and approved by the Board of Management of Allianz SE.

Our consolidated financial statements have been prepared in line with the IFRS adopted by the European Union. In addition, PwC performed a review of our interim financial statements as of 30 June 2024. The completion of the review and the resulting unqualified audit opinion is stated in the auditor's report, which carries the signature of the two independent auditors responsible.

For the financial year 2025, the Supervisory Board has again appointed PwC as auditor for our financial statements and solvency statement.

Their contact information is as follows:

PricewaterhouseCoopers GmbH Wirtschaftsprüfungsgesellschaft
Bernhard-Wicki-Straße 8
80636 Munich
Phone: +49 89 / 5790 - 50
Email: info@pwc.com

A.1.4.3 Relevant transactions within the Group

The Allianz Group defines “relevant transactions within the Group” as transactions between Allianz entities to which at least one (re)insurer established in the European Economic Area (EEA) is a party and with transaction amounts exceeding 5% of the Group Solvency Capital Requirement. In 2024, these very significant transactions were mainly related to capital management transactions, cash pool transactions, and internal reinsurance. Very significant reinsurance transactions were mainly related to quota-share contracts between Allianz Versicherungs-AG and Allianz SE, with a premium volume of € 5,652,560 thou.

The Allianz cash pool enables Allianz entities to pool available liquidity resources in order to achieve attractive returns. Allianz SE guarantees daily liquidity and a performance of at least the Euro Short-Term Rate. Apart from a share of any outperformance, there is no associated cost for the participating entities. Short-term overdrafts for Allianz entities are available subject to central approval. In addition, the Group supervisor has defined that intra-group transactions decided upon by the Board of Management of Allianz SE also qualify for very significant intra-group transactions. All very significant intra-group transactions have to be reported to the Group supervisor on an ad-hoc basis.

For information on significant changes in the scope of consolidation – such as significant acquisitions, significant changes in non-controlling interests, classification as held for sale, as well as significant disposals and deconsolidations – as well as for recent organizational changes, please refer to the section “A.1.3 Significant business and other events”.

A.1.4.4 Scope of consolidation

Material differences between the scope of the Group used for the consolidated financial statements and the scope used for the consolidated data, as determined in accordance with Article 335 of the Delegated Regulation (EU) 2015/35, are described in the chapter “D Valuation for Solvency Purposes”.

Chapter A is based on the scope of consolidation used for the consolidated financial statements, as there are no material differences between the two in terms of performance measures.

A.2 UNDERWRITING PERFORMANCE

A.2.1 Non-Life

For its Non-Life business (Property-Casualty), the Allianz Group defines the underwriting performance as shown under IFRS. This is consistent with the line items shown in the QRT S.05.01.02, except for the investment management expenses, which are considered in the latter only.

A reconciliation between the total underwriting performance as shown in our financial statements and in the aforementioned QRT is provided below.

Table 1: Non-Life – reconciliation of the underwriting performance as shown in the financial statements and in the QRT S.05.01.02

€ thou

	2024
Total as shown in the financial statements¹	4,908,027
Life insurance business remapped to Solvency II LoB Life	4,074
Health insurance business remapped to Solvency II LoB Health SLT	(3,788)
Non-Life annuities remapped to Solvency II LoBs Health SLT and Life	44,912
Investment management expenses	(537,702)
Other insurance service result	(9,764)
Scope difference	11,004
Total according to QRT S.05.01.02	4,416,763

1_Corresponds to operating insurance service result under IFRS and forms the basis for our comments in the following sections.

The reason for the adjustments mentioned above is that product classifications used under IFRS differ from those used in the QRT S.05.01.02 due to differences in methodology. One example is German accident insurance with premium refund, where risk products are sold jointly with life-like components. The movements of these life-like components are excluded from the Non-Life operating insurance service result for the QRT S.05.01.02. Another adjustment refers to annuities stemming from Non-Life contracts: These have to be reported within the Life part of the QRT S.05.01.02, as these obligations are settled as an annuity and can be evaluated using life techniques.

The differences between Solvency II and IFRS financial statements, with regards to reporting scope, are due to the fact that some of our subsidiaries – for instance, in Asia, Middle East or Africa – do not report according to Solvency II guidelines, so their results are not included in our Solvency II lines of business.

A.2.1.1 Underwriting performance at an aggregate level

Our **underwriting performance** as well as our insurance revenue increased, which resulted in a decrease in our combined ratio by 0.4 percentage points to 93.4%. Improvements from our accident year loss ratio and our expense ratio were partly offset by a lower contribution from our run-off result.

A.2.1.2 Underwriting performance by material geographical area

In the below analysis – as opposed to the QRT S.05.01.02 – we show the performance of our Global Lines separately in order to better reflect the true underlying drivers of our performance.

Table 2: Non-Life – underwriting performance by material geographical area

Total²	4,908,027	4,241,728

1_Business in the United States is written by the Global Lines only.

2_Corresponds to operating insurance service result under IFRS.

The Allianz Group's home country **Germany** remains the biggest market in terms of premiums, with Allianz Versicherungs-AG being the market leader in the local property and casualty insurance market. Here, our underwriting performance increased compared to the previous year, due to lower large losses and a lower level of claims from natural catastrophes.

The underwriting performance of our business in **Italy** increased due to a lower level of claims from natural catastrophes and underlying improvements, which was further supported by high premium growth, also benefiting from the consolidation of Incontra and Tua.

In **France**, our underwriting performance increased, due to higher levels of premiums while maintaining overall profitability.

In **Australia**, our underwriting performance significantly increased, supported by lower levels of claims from natural catastrophes and large losses.

Our underwriting performance in the **United Kingdom** increased, driven by a lower level of large losses and an improved underlying performance.

For our **Western & Southern European** markets, the underwriting performance was slightly above the previous year's level: Positive contributions from Türkiye and Ireland were partially offset by the run-off development for Spain.

In **Latin America**, our underwriting performance strongly increased. This was fully attributable to a better performance in Brazil and Argentina.

Our underwriting performance in **Central Europe** remained on a very strong level, despite a high level of claims from natural catastrophes.

At **Allianz Partners**, the underwriting performance decreased, as the underlying performance was impacted by adverse mix effects.

The line item **other** comprises our business in Africa, the Middle East, Asia, and Allianz Direct. The latter includes our direct insurance companies in Germany, Italy, Spain, and the Netherlands, which are driving the improvement, partially offset by effects from deconsolidation from our businesses in Africa and the Middle East.

For our **Global Lines** book – which comprises the global portfolios of AGCS, Allianz Trade, and Reinsurance – we saw a decrease of our underwriting performance for AGCS, driven by higher claims from natural catastrophe and run-off. The underwriting performance of Allianz Trade remains on a very strong level, despite normalization of claims activity. Reinsurance underwriting performance decreased, driven by the run-off development.

A.2.1.3 Underwriting performance by material Solvency II line of business

Table 3: Non-Life – underwriting performance by material Solvency II line of business

€ thou

	2024	2023
Direct business and accepted proportional reinsurance	4,625,005	4,439,248

Motor vehicle liability insurance	411,531	816,143
Other motor insurance	465,004	(291,216)
General liability insurance	316,545	714,536
Assistance	56,978	46,802
Marine, aviation, and transport insurance	229,866	353,946
Other ¹	2,190,291	2,227,012
Accepted non-proportional reinsurance	283,022	(197,520)
Total²	4,908,027	4,241,728

1_Including our subsidiaries – for instance, in Asia, Middle East or Africa – which do not report according to Solvency II guidelines with their insurance revenue totaling € 191 mn for 2024 and € 400 mn for 2023.

2_Corresponds to operating insurance service result under IFRS.

Direct business and accepted proportional reinsurance

Fire and other damage to property insurance is our biggest line of business in terms of insurance revenue. Here, we saw a strong increase in underwriting performance, due to an improved underlying performance as well as higher contribution from run-off.

The underwriting performance of our **motor vehicle liability insurance** portfolio decreased, mainly due to a higher contribution from run-off in 2023.

In our **other motor insurance** line of business, which mostly includes motor own-damage short-tail covers, the underwriting performance strongly increased, due to a lower level of claims from natural catastrophes as well as a higher contribution from run-off.

The underwriting performance of our **general liability insurance** portfolio decreased, due to a higher level of claims.

With regards to our **assistance** line of business, Allianz Partners – the global market leader in travel insurance and assistance – is the largest provider of assistance products within the Allianz Group. It contributed more than 90% of this line's insurance revenues. The increase in underwriting performance is driven by an increased premium level in combination with improved profitability.

While **marine, aviation, and transport insurance** is offered by a number of local Allianz companies, most of the business in this field is written by AGCS. Over the reporting period, we recorded a decrease in underwriting performance compared to 2023, with the largest share attributable to the level of claims at AGCS.

The following lines of business are summarized as **other**:

- credit and suretyship insurance,
- income protection insurance,
- workers' compensation insurance,
- legal expenses insurance,
- medical expense insurance, and
- miscellaneous financial loss.

Overall, the underwriting performance of these lines of business remained on previous year levels.

Accepted non-proportional reinsurance

A major share of our portfolio in **accepted non-proportional reinsurance** was written in our property line of business at Reinsurance. The increase in underwriting performance was attributable to a high level of claims in 2023.

A.2.2 Life

For its Life business (Life/Health insurance), the Allianz Group defines underwriting performance as the operating profit shown under IFRS, and thus more broadly than in the line items under QRT S.05.01.02.

A reconciliation between the total underwriting performance shown in our financial statements (operating profit) and the figures reported in the QRT mentioned above is provided below.

Table 4: Life – reconciliation of the underwriting performance as shown in the financial statements and in the QRT S.05.01.02

€ thou

	2024
Total as shown in the financial statements¹	5,505,106
Operating investment result (excluding investment expenses)	(2,267,419)
Other operating result from insurance service and investment contracts	(1,156,516)
Net fee and commission result, operating other result	(122,337)
Life-like business and scope difference	(45,198)
Investment component of insurance service, and investment contract claims	(66,071,793)
Total according to QRT S.05.01.02	(64,158,159)

1_Corresponds to operating profit under IFRS and forms the basis for our comments in the following section.

With IFRS 9 and 17 implementation, investment component is the largest component bridging underwriting performance and QRT S.05.01.02, as insurance revenue according to IFRS 17 is used to represent premiums earned required under that QRT. In addition, some IFRS 9 and 17 specific items under the operating insurance service result – such as Variable Fee Approach (VFA) adjustment, loss component, and operating result from investment contracts – are not included in QRT reporting.

Line items in the aforementioned QRT do not include another large component of underwriting performance (or operating profit) in our Life segment according to IFRS, namely the operating investment result. Likewise, QRT reporting does not include the net fee and commission result and other operating result.

Further adjustments concern Non-Life products sold jointly with life-like components. For the purposes of the QRT mentioned above, these life-like components are reclassified from the Non-Life to the Life underwriting result.

A.2.2.1 Underwriting performance at an aggregate level

Our underwriting performance was strong, driven by increased contractual service margin (CSM) release and improved variances from claims and expenses.

A.2.2.2 Underwriting performance by material geographical area

Table 5: Life – underwriting performance by material geographical area

€ thou

	2024	2023
Home country		
Germany Life	1,183,628	1,079,257
Germany Health	243,507	209,744
Top 5		
France	624,628	657,960
Italy	585,117	559,328
Benelux	151,169	157,126
United States	1,078,201	1,085,300
Türkiye	179,885	109,737
Central Europe	517,430	454,419
Asia-Pacific	619,933	589,025
Other markets ¹	321,608	289,517
Total²	5,505,106	5,191,413

1_Prior year value updated due to a change in the top 5 countries.

2_Corresponds to operating profit under IFRS.

Our underwriting performance in **Germany** remained strong, driven by business growth and better investment result.

In Western & Southern Europe, the key sources of underwriting performance were **France**, **Italy**, and **Türkiye**. In **France**, favorable claims result on protection and health business was offset by a lower CSM release and by a lower investment result from higher interest accretion, while the increase in **Italy's** underwriting performance was mainly due to a higher CSM release from business growth supported by a favorable investment result. In **Türkiye**, underwriting performance improved significantly due to profitable business growth in protection and in investment contracts supported by favorable economics.

Our underwriting performance in the **United States** was stable and higher CSM release from business growth was offset by non-recurring items and corrections.

The underwriting performance in **Central Europe** improved significantly, driven by Poland with a higher CSM release, better fee income and lower guarantee fund cost.

The underwriting performance of our business in the **Asia-Pacific** region improved with a higher CSM release and better investment result.

The underwriting performance in **other markets** increased spread across various countries.

A.2.2.3 Underwriting performance by material Solvency II line of business

Table 6: Life – underwriting performance by material Solvency II line of business

€ thou

	2024	2023
Health insurance	604,226	524,535
Insurance with profit participation	2,098,222	2,114,262
Index-linked and unit-linked insurance	1,481,901	1,126,174
Other life insurance	1,320,759	1,425,951
Non-scope entities and non-material lines of business	(3)	491
Total¹	5,505,106	5,191,413

1_Corresponds to operating profit under IFRS.

Our underwriting performance went up, predominantly driven by an increase in the index-linked and unit-linked portfolio, as well as in health insurance.

The results in our **health insurance** business improved, mainly from improved health results in France with better claims experience and in Germany Health with a higher CSM release following modeling improvements and business growth.

Our **insurance with profit participation** line was stable where a stronger profitability in Life Germany from business growth was offset by a lower CSM release and a worsened claims ratio in France as well as a reclassification of a product line from participating investment to unit-linked products in Mexico.

The significant increase in our **index-linked and unit-linked insurance** lines of business was largely driven by our U.S. business with business growth in indexed variable annuities and positive hedge impacts on variable annuities, by a reclassification of a product line from participating investment to unit-linked products in Mexico, and business growth in Italy, Germany Life, and Central Europe, mainly in Poland.

Our **other life insurance** line of business primarily comprises our fixed index annuity business in the United States as well as portfolios with risk products without profit participation in the Asia-Pacific and Europe, predominantly in Spain, Türkiye, Italy, Benelux, and Central Europe. The underwriting performance of this business line decreased, mainly due to non-routine impacts in our U.S. business.

Non-scope entities and non-material lines of business do not contribute any material result.

A.3 INVESTMENT PERFORMANCE

A.3.1 Investment performance and its components

A major share of the assets that the Allianz Group holds for investment is linked to our insurance businesses, with the vast majority being invested in debt instruments. The performance of these investments and its development over time depend on two factors: how we allocate our investments and the development of the capital markets with regard to the asset classes concerned.

The following tables provide an overview of how our assets were allocated in our investment portfolio, and of our net investment income with all its components.

Table 7: Asset allocation

As of 31 December	2024		2023	
Type of investment	€ thou	%	€ thou	%
Debt instruments; thereof:	574,114,433	74.9%	557,084,806	75.6%
Government bonds	190,092,392	33.1%	187,568,957	33.7%
Covered bonds	44,172,573	7.7%	44,380,642	8.0%
Corporate bonds	208,783,955	36.4%	198,911,688	35.7%
Other	131,205,865	22.9%	126,354,816	22.7%
Equities	49,437,870	6.4%	48,094,445	6.5%
Funds	82,462,576	10.8%	73,611,324	10.0%
Real estate	24,295,097	3.2%	25,670,603	3.5%
Other	36,648,314	4.8%	32,350,953	4.4%
Total	766,958,290	100.0%	736,812,132	100.0%

Table 8: Development of the net investment income

€ thou

	Debt instruments		Equities		Funds		Real Estate		Other		Total	
	2024	2023	2024	2023	2024	2023	2024	2023	2024	2023	2024	2023
Interest result ¹	20,382,048	18,818,654	1,374,064	1,383,005	4,223,404	3,251,239	1,313,472	1,241,450	2,232,672	1,940,629	28,019,477	25,385,627
Realized gains and losses (net)	(3,816,375)	(5,498,118)	88,154	(105,951)	-	-	290,787	86,144	33,339	-	(3,404,095)	(5,517,926)
Valuation result											13,470,297	6,508,778
Investment expenses											(2,136,440)	(1,848,971)
Net investment income											35,949,239	24,527,509

¹ The total is calculated net of interest expenses of € (1,506,182) thou (2023: € (1,249,349) thou) as those expenses are not assigned to single asset categories. Therefore, the values shown for each asset category do not add up to the total presented.

Table 9: Development of interest result – split by instruments

€ thou

Type of investment	2024	2023
Debt instruments; thereof:	20,382,048	18,818,654
Bonds	17,346,619	16,164,723
Loans	3,035,429	2,653,931
Equities	1,374,064	1,383,005
Listed	675,159	679,552
Non-listed	698,905	703,453
Real estate, cash & other	7,769,548	6,433,317
Total¹	28,019,477	25,385,627

1_ The total is calculated net of interest expenses of € (1,506,182) thou (2023: € (1,249,349) thou) as those expenses are not assigned to single asset categories. Therefore, the values shown for each asset category do not add up to the total presented.

Our net investment income increased in 2024. The key driver for this was an increase in the **valuation result**, which was mainly driven by the market developments in 2024.

Another contributor to the increase in investment result was the increase in our **interest result**, which was primarily due to higher income from debt instruments.

In addition, we saw an increase in **realized gains and losses (net)** due to lower losses realization on debt securities in the Life/Health business segment.

A.3.2 Gains and losses directly recognized in equity

The following table shows the composition of our other comprehensive income:

Table 10: Composition of the other comprehensive income

€ thou

	2024	2023
Items that may be reclassified to profit or loss in future periods:		
Foreign currency translation adjustments	1,358,265	126,470
Debt investments at fair value through OCI	(873,889)	21,168,971
Cash flow hedges	77,349	637,716
Share of other comprehensive income of associates and joint ventures	151,854	14,747
Insurance liabilities	(2,251,928)	(19,037,292)
Reinsurance assets	542,106	(49,925)
Miscellaneous	(110,028)	(32,819)
Items that may never be reclassified to profit or loss:		
Changes in actuarial gains and losses on defined benefit plans	133,759	(377,997)
Equity investments at fair value through OCI	1,379,095	1,654,532
Insurance liabilities	(1,218,838)	(1,730,325)
Miscellaneous	69,147	(8,108)
Total	(743,107)	2,365,970

Our other comprehensive income decreased in 2024. The decrease is largely driven by higher interest rates, which led to a negative change in unrealized gains and losses from insurance liabilities and debt investments at fair value through OCI.

Most of this decrease was offset by an increase in unrealized gains and losses from equity investments at fair value through OCI and foreign currency translation adjustments.

A.3.3 Information about investments in securitization

The asset category definitions used for financial reporting deviate slightly from those defined under Solvency II. The largest deviation, however, concerns the scope of our Group financial statements versus Solvency II. To provide comprehensive information about our investments in securitization, we base the following analysis on the definitions and scope used in our financial reporting.

As of 31 December 2024, our exposure to asset-backed securities (ABS) and mortgage-backed securities (MBS) totaled € 31,347,188 thou (2023: € 28,103,907 thou), or 5% (2023: 5%) of our debt instruments portfolio. The largest share of our ABS portfolio, both in 2024 and in 2023, consisted of MBS. Overall, 97% (2023: 97%) of the ABS portfolio received an investment grade rating, with 68% (2023: 71%) rated "AA" or better.

A.4 PERFORMANCE OF OTHER ACTIVITIES

A.4.1 Asset Management – material income and expenses incurred over the reporting period

A.4.1.1 Operating revenues

Our **operating revenues** increased from €8,085,515 thou to €8,324,452 thou, or by 3.0% on a nominal basis. This development was driven by a higher net fee and commission income at both PIMCO and AllianzGI, supported by higher other operating revenues, primarily driven by gains from foreign currency translation effects. On an internal basis, operating revenues also increased by 3.1%.

Net fee and commission income increased, mainly due to a higher average third-party AuM level at both PIMCO and AllianzGI, while we recorded lower **performance fees** – stemming from PIMCO; AllianzGI, on the other hand, reported an increase.

A.4.1.2 Operating profit

Our **operating profit** increased from €3,126,103 thou to €3,238,837 thou, or by 3.6% on a nominal basis, as the growth in operating revenues exceeded increased operating expenses. On an internal basis, our operating profit grew by 3.7%.

The nominal increase in **administrative expenses** stemmed mainly from PIMCO.

Our **cost-income ratio** improved by 0.2 percentage points compared to the previous year.

A.4.2 Corporate and Other – operating result incurred over the reporting period

The **operating result** declined compared to the previous year from €(473,695)thou to €(615,169)thou. This was due to a lower contribution from Alternative Investments, and a decline in the operating result from Holding & Treasury, partly offset by a higher operating profit from our Banking operations.

A.4.3 Leasing arrangements

For information on existing leasing arrangements, please refer to the section “D.3.14 Leasing”.

A.5 ANY OTHER INFORMATION

All material information regarding the business and performance has been addressed in the previous sections.

SYSTEM OF GOVERNANCE

B

B.1 GENERAL INFORMATION ON THE SYSTEM OF GOVERNANCE

B.1.1 Corporate governance fundamentals

B.1.1.1 Allianz as a European Company (SE)

As a European company, Allianz SE is subject to special European SE regulations and the German SE Implementation Act ("SE-Ausführungsgesetz – SEAG") as well as the German Act on the Involvement of Employees in a European Company ("SE-Beteiligungsgesetz – SEBG"), in addition to German Stock Corporation Law.

B.1.1.2 Board of Management of Allianz SE

The Board of Management manages the Company and conducts business with joint responsibility of its members in accordance with the law, the Statutes, and its Rules of Procedure. The Board of Management determines the business objectives and the strategic direction of the Company. In the context of the management of the Group, the Board of Management is in particular responsible for the coordination and supervision of the operating entities, controlling of capital resources, selection of candidates for leading management positions and representation of the Group.

Composition and operations of the Board of Management

The Board of Management of Allianz SE currently has nine members. In accordance with the stipulations of German Stock Corporation Law, members of the Board of Management of Allianz SE are appointed for a maximum term of five years. In line with the German Corporate Governance Code, the maximum term for first-time appointments is, as a general rule, three years. Also, as a general rule, its members may not be older than 62.

The members of the Board of Management are jointly responsible for the management of the Company and compliance with legal requirements. Notwithstanding this overall responsibility, the individual members independently head the departments assigned to them. They consult with the Chairperson of the Board of Management on important issues. The Chairperson of the Board of Management is also responsible for coordinating the departments.

Divisional responsibilities for business segments and/or functional responsibilities are assigned to the individual departments. The latter include, inter alia, Finance, Risk Management and Controlling Functions, Investments, Operations and IT, Human Resources, Legal, Compliance, Internal Audit, and Mergers & Acquisitions. Business division responsibilities focus on geographical regions or global lines. Rules of Procedure specify the inner organization of the Board of Management as well as the departmental responsibilities. Moreover, the Board of Management appoints a member who is responsible for the area of "Labor and Social Affairs". The appointment requires the approval of the Supervisory Board.

The meetings of the Board of Management are convened and chaired by the Chairperson. In addition, any member of the Board may request a meeting, stating the proposed subject of discussion. As a rule, a meeting of the Board of Management was held every two weeks in the financial year 2024.

The Board of Management has a quorum if all members of the Board of Management have been invited to a meeting and at least half its members – including the Chairperson or a member of the Board of Management appointed by them – attend the meeting. Unless otherwise stipulated by law, the full Board of Management takes decisions with a simple majority of the votes cast. In the event of a tie, the Chairperson of the Board of Management has the deciding vote. The Chairperson can also veto decisions, but they cannot enforce a decision against the majority vote of the Board of Management.

Composition and operations of the Board of Management committees and the Group committees

The Board of Management has formed Board of Management committees from among its members. The task of these committees is to coordinate and decide on matters of the Board of Management referred to them, as well as to prepare decisions for the Board of Management reserved to it. In addition, the committees advise the full Board of Management.

In the financial year 2024, the following Board of Management committees were in place:

Table 11: Board of Management committees

Board committees	Responsibilities
Group Finance and Risk Committee Claire-Marie Coste-Lepoutre (Chairperson), Dr. Klaus-Peter Röhler, Dr. Günther Thallinger, Christopher Townsend, Dr. Andreas Wimmer.	Preparing the capital and liquidity plans for the Company and the Group; operationalizing and controlling adherence to the principles of the group-wide capital and liquidity planning as well as the investment strategy and preparing the risk strategy; approving material individual investments and preparing guidelines for the currency management, Group financing and internal Group capital management as well as overseeing the establishment of a risk management and risk controlling system for the Company and the Group, including dynamic stress tests.
Standing guests Head of Group Risk, Head of CEO Office, Head of CFO Office.	
Group IT Committee Dr. Barbara Karuth-Zelle (Chairperson), Sirma Boshnakova, Claire-Marie Coste-Lepoutre, Dr. Klaus-Peter Röhler, Dr. Günther Thallinger, Christopher Townsend.	Developing and proposing a group-wide IT strategy, monitoring its implementation, and approving local and group-wide IT investments as well as reviewing and overseeing individual IT projects.
Standing guests Head of Group Technology, Head of ITCO & Global Programs, Head of ITCO Office, and CEO Allianz Technology SE.	
Group Mergers and Acquisitions Committee Renate Wagner (Chairperson), Oliver Bäte, Claire-Marie Coste-Lepoutre, Dr. Andreas Wimmer.	Managing and overseeing Group M&A transactions, including approval of individual transactions within certain thresholds.
Standing guests Head of Group Mergers & Acquisitions, Head of Group Treasury & Corporate Finance, Head of Group Performance Steering, Head of Group Strategy, Marketing & Distribution.	
As of 31 December 2024	

In addition to Board of Management committees, there are also Group committees. They, too, are responsible for coordinating and deciding on matters of the Board of Management referred to them, and for preparing decisions for the Board of Management of

Allianz SE, reserved to it. They are also responsible for ensuring a smooth flow of information within the Group.

In the financial year 2024, the following Group committees were in place:

Table 12: Group committees

Group committees	Responsibilities
Group Compensation Committee Board members of Allianz SE and executives below Allianz SE Board level.	Designing, monitoring, and improving group-wide compensation systems in line with regulatory requirements, monitoring the implementation of its decisions by defining the relevant control processes, in particular via local compensation committees and an approval process.
Group Investment Committee Board members of Allianz SE and Allianz Group executives.	Specifying the strategic asset allocation for the Group to enable consistent implementation by the operating entities, particularly in relation to alternative assets; monitoring performance across all asset classes, and ensuring consistent organization of the Investment Management function and Investment Governance across the Group; defining requirements for sustainable investments and providing guidance on the implementation of sustainability aspects in proprietary investments.
Group Governance and Control Committee Board members of Allianz SE and executives below Allianz SE Board level.	Supporting the Board of Management to fulfill its responsibilities with respect to regulatory governance, organizational and control requirements; reinforcing the interaction and collaboration between Key Control Functions in governance and control-related topics; providing a platform for a structured and institutionalized exchange on cross-functional and group-wide governance and control-related topics; overseeing governance topics for the Group / Allianz SE and coordinating the respective cross-functional activities, including a coordinated review of the System of Governance; facilitating and supporting the operational and organizational effectiveness of the Group's governance model and the internal control system; enhancing and promoting the Solvency II governance culture.

As of 31 December 2024

Cooperation with the Supervisory Board

The Board of Management reports regularly and comprehensively to the Supervisory Board on business development, the Company's net assets, financial position and earnings, planning and achievement of objectives, business strategy, and risk exposure. Details on the Board of Management's reporting to the Supervisory Board are laid down in the Information Rules issued by the Supervisory Board.

Important decisions of the Board of Management require approval by the Supervisory Board. Approval requirements are stipulated by law, by the Statutes, or in individual cases by decisions of the Supervisory Board itself or the General Meeting. Supervisory Board approval is required, for example, for certain capital measures, the conclusion of intercompany agreements, and the launch of new business segments or the closure of existing ones. Approval is also required for acquisitions of companies and holdings in companies as well as for divestments of Group companies that exceed certain thresholds.

B.1.1.3 Supervisory Board of Allianz SE

The Supervisory Board oversees and advises the Board of Management on managing the business. It is also responsible for appointing the members of the Board of Management, determining their overall remuneration, succession planning for the Board of Management, and reviewing Allianz SE's and the Allianz Group's annual financial statements.

Composition and operations of the Supervisory Board

The German Co-Determination Act ("Mitbestimmungsgesetz") does not apply to Allianz SE because it has the legal form of a European Company (SE). Instead, the size and composition of the Supervisory Board is determined by general European SE regulations. These regulations are implemented in the Statutes and via the Agreement concerning the Participation of Employees in Allianz SE in the version dated June 2021.

The Supervisory Board of Allianz SE comprises twelve members. The six shareholder representatives are appointed by the General Meeting, the six employee representatives are appointed by the SE Works Council. The Supervisory Board currently in office includes four employee representatives from Germany – including one trade union representative – and one each from France and Italy. The regular term of appointment for the members of the Supervisory Board of Allianz SE is four years. Moreover, a staggered board with different appointment periods was introduced with the elections to the Supervisory Board on 4 May 2022.

The Supervisory Board takes all decisions with a simple majority. In the event of a tie, the casting vote lies with the Chairperson of the Supervisory Board, who – at Allianz SE – must be a shareholder representative. If there is a tie and the Chairperson is not present, the casting vote lies with the vice chairperson elected at the shareholder

representatives' proposal. A second vice chairperson is elected at the employee representatives' proposal.

Function of the Supervisory Board

In the financial year 2024, the Supervisory Board held six ordinary meetings. Following the elections to the Supervisory Board, an additional constituent meeting was held upon the close of the Annual General Meeting on 8 May 2024. The ordinary meetings took place in February, March, May, June, September, and December. All meetings were held as in-person meetings.

At all meetings held in the financial year under review, the Board of Management informed the Supervisory Board about the development of business at Allianz SE and the Allianz Group. In particular, the Board of Management presented the development of Group revenues and results as well as business developments in the individual business segments. The Board of Management provided comprehensive information about the development of Allianz SE and the Allianz Group, including the planning as well as deviations of actual business developments from the planning. In this context, the Board of Management also regularly discussed the adequacy of capitalization, the solvency ratio of Allianz SE and the Group, and the corresponding stress and risk scenarios with the Supervisory Board. The annual and consolidated financial statements, including the respective auditor's reports, the half-year report as well as quarterly earnings releases, were reviewed in detail by the Supervisory Board after preparation by the Audit Committee.

In addition to the impact of rising interest rates and geopolitical developments on the overall economy and the insurance sector, the reports and deliberations once again focused on a range of strategic topics, including the sales strategy and the strategy for the Asset Management business segment, as well as the Board of Management's planning for the financial year 2025. The effects and management of the risks of natural disasters were the subject of reports at several meetings of the full Supervisory Board and the committees. The Supervisory Board also dealt with the amendments to the dividend policy proposed by the Board of Management. The status of the digitalization of business processes and data privacy issues, particularly in connection with the legal framework for the use of artificial intelligence, were also discussed in detail. Other items discussed included cyber risk and IT security. As usual, the Supervisory Board also dealt extensively with personnel matters relating to the Board of Management as well as succession planning for the Board of Management and the Supervisory Board. The deliberations of the

Supervisory Board and in particular the Personnel Committee and Sustainability Committee also included establishing target achievement and setting targets for the remuneration of the Board of Management and revising the remuneration system for the Board of Management.

The Supervisory Board received regular, timely and comprehensive reports from the Board of Management. The Board of Management's oral reports at the meetings were prepared with written documents, sent to each member of the Supervisory Board in good time before the relevant meeting. The Board of Management also informed the Supervisory Board in writing about important events, including between meetings. The Chairmen of the Supervisory Board and the Board of Management held regular discussions about key developments and decisions. The Chairman of the Supervisory Board held separate talks with each member of the Board of Management on each individual's status of target achievement, both for the respective half year and the full year.

Once again in 2024, individual and group training sessions were held on the basis of a development plan adopted for the further training of the members of the Supervisory Board, for example on the internal model for determining the solvency ratio and on the amended accounting principles in accordance with IFRS 9 and 17. The new members of the Supervisory Board received comprehensive support from the company during their induction.

Supervisory Board committees

Part of the Supervisory Board's work is carried out by its committees. The Supervisory Board receives regular reports on the activities of its committees. The composition of committees and the tasks assigned to them are governed by the Supervisory Board's Rules of Procedure.

Table 13: Supervisory Board committees

Supervisory Board committees	Responsibilities	Supervisory Board committees	Responsibilities
Standing Committee 5 members – Chairperson: Chairperson of the Supervisory Board (Michael Diekmann) – Two further shareholder representatives (Sophie Boissard, Dr. Friedrich Eichiner) – Two employee representatives (Jürgen Lawrenz, Jean-Claude Le Goaër)	– Approval of certain transactions which require the approval of the Supervisory Board, e.g., capital measures, acquisitions, and disposals of participations. – Preparation of the Declaration of Conformity pursuant to § 161 of the German Stock Corporation Act and review of corporate governance. – Preparation of the self-assessment of the Supervisory Board.	Personnel Committee 3 members – Chairperson: Chairperson of the Supervisory Board (Michael Diekmann) – One further shareholder representative (Dr. Jörg Schneider) – One employee representative (Gabriele Burkhardt-Berg)	– Preparation of the appointment and dismissal of Board of Management members. – Preparation of plenary session resolutions on the remuneration system and resolutions on setting of the total compensation of Board of Management members. – Preparation of the Remuneration Report. – Conclusion, amendment, and termination of contracts with Board of Management members unless reserved for the plenary session. – Long-term succession planning for the Board of Management. – Approval of the assumption of other mandates by Board of Management members.
Audit Committee 5 members – Chairperson: appointed by the Supervisory Board (Dr. Friedrich Eichiner) – Three shareholder representatives (in addition to Dr. Friedrich Eichiner: Michael Diekmann, Dr. Jörg Schneider) – Two employee representatives (Frank Kirsch, Jean-Claude Le Goaër)	Initial review of the annual financial statements of Allianz SE and the Allianz Group, the Management Reports (including Non-financial Statement and Risk Report) and the proposal for the appropriation of net earnings, review of quarterly results, and the half-yearly financial reports. – Monitoring of the financial reporting process, the effectiveness of the internal control and risk management system, internal audit system, and legal and compliance issues. – Preparation of the Supervisory Board's nomination for the election of the statutory auditor. – Supervision of the audit procedures, in particular monitoring of the independence of the auditor, the quality of the audit procedures and the services additionally rendered by the auditor, awarding of the audit contract, and determining the audit areas of focus. – Discussion to evaluate the audit risk, audit strategy, and audit planning.	Nomination Committee 3 members – Chairperson: Chairperson of the Supervisory Board (Michael Diekmann) – Two further shareholder representatives (Dr. Friedrich Eichiner, Dr. Jörg Schneider)	– Setting of concrete objectives for the composition of the Supervisory Board. – Establishment of selection criteria for shareholder representatives on the Supervisory Board in compliance with the Code's recommendations on the composition of the Supervisory Board. – Selection of suitable candidates for election to the Supervisory Board as shareholder representatives.
Risk Committee 5 members – Chairperson: appointed by the Supervisory Board (Michael Diekmann) – Three shareholder representatives (in addition to Michael Diekmann: Dr. Friedrich Eichiner, Dr. Jörg Schneider) – Two employee representatives (Prof. Dr. Nadine Brandl, Primiano Di Paolo)	– Monitoring of the general risk situation and special risk developments in the Allianz Group. – Monitoring of the effectiveness of the risk management system. – Initial review of the Risk Report and other risk-related statements in the annual financial statements and consolidated financial statements as well as management reports, informing the Audit Committee of the results of such reviews.	Technology Committee 5 members – Chairperson: appointed by the Supervisory Board (Rashmy Chatterjee) – Three shareholder representatives (in addition to Rashmy Chatterjee: Sophie Boissard, Michael Diekmann) – Two employee representatives (Gabriele Burkhardt-Berg, Jürgen Lawrenz)	– Regular exchange regarding technological developments. – In-depth monitoring of the Board of Management's technology and innovation strategy. – Support of the Supervisory Board in the oversight of the implementation of the Board of Management's technology and innovation strategy.
		Sustainability Committee 5 members – Chairperson: appointed by the Supervisory Board (Stephanie Bruce) – Three shareholder representatives (in addition to Stephanie Bruce: Sophie Boissard, Michael Diekmann) – Two employee representatives (Gabriele Burkhardt-Berg, Frank Kirsch)	– Regular exchange regarding sustainability-related issues (Environment, Social, Governance – ESG). – Close monitoring of the Board of Management's sustainability strategy. – Support of the Supervisory Board in the oversight of the execution of the Board of Management's sustainability strategy. – Support of the Personnel Committee of the Supervisory Board in the preparation of the ESG-related target setting as well as the assessment of the fulfillment of the set targets for the Board of Management's remuneration.
As of 31 December 2024			

B.1.1.4 General Meeting

Shareholders exercise their rights at the General Meeting. The General Meeting elects the shareholder representatives of the Supervisory Board and decides on the approval of the actions taken by the Board of Management and the Supervisory Board. Furthermore, it decides, in particular, on the appropriation of net earnings, capital measures, the election of the auditor, and approval of intercompany agreements. It also decides on the approval of the remuneration system for the members of the Board of Management presented by the Supervisory Board, the remuneration of the Supervisory Board, the approval of the Remuneration Report prepared by the Board of Management and the Supervisory Board, as well as changes to the Company's Statutes. Resolutions of the General Meeting shall be passed, unless mandatory legal provisions require otherwise, by a simple majority of the votes cast. When adopting resolutions, each share confers one vote.

Each year, an annual general meeting is held, at which the Board of Management and Supervisory Board give an account of the preceding financial year. For special circumstances, the German Stock Corporation Act provides for the convening of an extraordinary general meeting. If authorized by the Statutes, general meetings can also be held in virtual format.

B.1.1.5 Declaration of Conformity with the German Corporate Governance Code

Good corporate governance is essential for sustainable business success. The Board of Management and the Supervisory Board of Allianz SE therefore attach great importance to complying with the recommendations of the German Corporate Governance Code (hereinafter "Code"), as amended from time to time. There are no statutory provisions on the basis of which recommendations of the Code are not applicable to Allianz SE. On 12 December 2024, the Board of Management and the Supervisory Board issued the following Declaration of Conformity of Allianz SE with the Code:

Declaration of Conformity in accordance with § 161 of the German Stock Corporation Act

Declaration of Conformity by the Board of Management and the Supervisory Board of Allianz SE with the recommendations of the German Corporate Governance Code Commission in accordance with § 161 of the German Stock Corporation Act

Since the last Declaration of Conformity as of December 14, 2023, Allianz SE has complied with all recommendations of the German Corporate Governance Code in the version of April 28, 2022, and will comply with them in the future.

Munich, December 12, 2024
Allianz SE

For the Board of Management:
Signed Oliver Bäte

Signed Claire-Marie Coste-Lepoutre

For the Supervisory Board:
Signed Michael Diekmann

In addition, Allianz SE follows all suggestions of the Code in its version of 28 April 2022

B.1.2 Main tasks and responsibilities of the key functions

The Solvency II regulation requires the implementation of internal control functions (so-called key functions). Therefore, Allianz has implemented the following key functions group-wide:

- Compliance,
- Internal Audit,
- Risk Management, and
- Actuarial.

Besides the above key functions and beyond the minimum requirements of Solvency II, Allianz has designated two other functions as key functions within the Allianz Group, including Allianz SE:

- Legal, and
- Accounting and Reporting.

B.1.2.1 Compliance function (Group Compliance)

The Allianz Group's Compliance function performs the tasks laid down in § 29 VAG.

Key tasks and activities of the Compliance function include:

- advising the Board of Management on compliance with applicable laws, regulations, and regulatory requirements (external requirements) as well as on the consequences of material changes in the legal environment,
- identifying and assessing compliance risks (risk of legal or regulatory sanctions, material financial losses, and/or reputational damages that Allianz SE or the Allianz Group might sustain as a result of non-compliance with external and internal requirements),
- monitoring whether compliance with external requirements and internal company rules, which represent a significant compliance risk, is ensured by appropriate and effective internal procedures,
- observing and analyzing developments in the legal environment and evaluating the potential impact of material changes to the legal environment on the Allianz Group.

The Compliance function reports regularly to the Board of Management on current compliance issues, at least once a year. For further information on the Compliance function, please refer to "B.4.3 Compliance function".

B.1.2.2 Internal Audit function (Group Audit)

The main task of Internal Audit is to support the organization in accomplishing its objectives by using a systematic and targeted approach to evaluate and help to improve the adequacy and effectiveness of the internal control system. This is achieved by providing independent, objective assurance and advisory activities designed to add value and improve business processes.

For further information on the implementation of the Internal Audit function and maintaining its organizational independence, please refer to "B.5 Internal Audit Function".

B.1.2.3 Risk Management function (Group Risk)

Group Risk has a central role within the risk governance framework: It is the key Group function to support the Board of Management in fulfilling its risk oversight responsibilities, and serves as the Risk Management function for Allianz SE.

For further information on our Group Risk Management function, please refer to the section “B.3.3.2 Overall risk organization and roles in risk management”.

B.1.2.4 Actuarial function (Group Actuarial)

The main tasks of the Actuarial function are to coordinate and validate the calculation of technical provisions for the Solvency II market value balance sheet and the IFRS balance sheet, to provide an opinion on the underwriting and reinsurance strategy, and to contribute to risk management.

For further information on how the Actuarial function is implemented, please refer to “B.6 Actuarial Function”.

B.1.2.5 Legal function (Group Legal)

The general task of the Legal function is to ensure adherence to all applicable laws, rules, and regulations, and to advise the Board of Management and the Supervisory Board on all legal matters. This also includes interpreting legal regulations and considering legal changes.

The Legal function and the Compliance function inherently work closely together in performing their tasks. This applies in particular to interpreting and ensuring compliance with applicable laws and regulations as well as related reporting to the Board of Management.

B.1.2.6 Accounting and Reporting function (Group Accounting & Reporting)

While the Accounting and Reporting function is a key function as defined by the Allianz Group’s Fit and Proper Policy, it does not constitute a Second Line of Defense function at Allianz. Its activities are governed by the Group Accounting and Reporting Policy (GARP): This policy provides basic guidelines to ensure that the Allianz Group provides reliable and high-quality financial information; also, it facilitates the implementation of regulatory and accounting requirements, the aim being to minimize accounting and reporting risks, and to protect the Group’s financial stability and reputation.

The main processes and activities of the Accounting and Reporting function are:

- establishment of accounting and reporting principles and procedures (e.g., establishing internal rules for accounting and reporting, training, and communication; interpreting accounting and reporting topics; and supporting activities around the external audit),
- closing activities (e.g., coordination of closing activities, data collection, consolidation and qualitative review of accounting treatment), and
- external reporting (e.g., Solvency II quantitative and qualitative reporting, regulatory reporting other than Solvency II, IFRS reportings, as well as the preparation of the Sustainability Statement according to the Corporate Sustainability Reporting Directive (CSRD)).

Organizationally, the Group Accounting and Reporting function is assigned to the Group Accounting & Reporting Group Center.

The Head of Group Accounting & Reporting (Group Chief Accountant) is the key function holder for the Group Accounting and Reporting function as well as for Allianz SE and must fulfill the respective “fit and proper” requirements. The Group Chief Accountant reports directly to the member of the Allianz SE Board of Management responsible for “Finance, Controlling, Risk, Legal and Compliance”. Group Accounting & Reporting relies on and cooperates with other functions that provide deliveries for external reporting products, i.e., interim and annual IFRS reports as well as qualitative and quantitative regulatory reports. Such deliveries are part of the responsibility of the respective function. To assure the highest quality standards and consistency in external reporting, these functions are required to also follow the principles outlined in the GARP.

The Group Accounting and Reporting function is responsible for carrying out accounting and reporting tasks at the Group level and monitoring the adherence to accounting and reporting-related internal rules. Monitoring activities include on-site business reviews at the related undertaking level, which are conducted by Group Accounting & Reporting with or without the involvement of the local finance function or external support.

Each holder of a local Accounting and Reporting function must have a direct reporting line to the Board of Management of the related undertaking. A functional reporting line exists up to the regional or global line Accounting and Reporting function, and ultimately up to the Group Chief Financial Officer.

B.1.2.7 Further information on key functions

For information on how the key functions have the necessary authority, resources and operational independence to carry out their tasks and how they report to and advise the Supervisory Board and the Board of Management, please refer to chapter “B.4 Internal Control System”.

B.1.3 Policy framework

The steering and control of the Group is further supported by a set of internal corporate rules. At the Group level, Allianz SE has defined a policy framework outlining the relevant criteria for creating and updating internal corporate rules, and also including the underlying rule-setting process. This framework comprises four levels of corporate rules – from top to bottom:

- Allianz Code of Conduct,
- Allianz policies,
- Allianz standards, and
- Allianz functional rules.

The responsibility for the policy framework at Group level lies with the Legal function (Group Legal). In 2024, as in previous years, Allianz conducted an annual review process for all policies required under Solvency II. Revised versions of the Group policies were approved by the Allianz SE Board of Management in June and December 2024 according to the regulatory requirements. These Group policies form the internal policies for both the Allianz Group and Allianz SE. The following table summarizes the respective policies in force:

Table 14: Allianz Group policies

Policy	Core features	Responsible function/Group Center
Group Governance and Control Policy	Umbrella document to describe the Group's System of Governance and the fundamentals for the risk management and internal control system.	Group Legal
Group Audit Policy	Definition of key rules and principles for the Internal Audit function, including professional minimum standards.	Group Audit
Group Risk Policy	Central document that outlines the conceptual and procedural basis for the Risk Management function. Description of the risk governance and the risk-related policy framework.	Group Risk
Group Compliance Policy	Core policy for the Group's Compliance function. Policy contains the key rules, principles, tasks and the relevant compliance risk areas, as well as specific requirements and compliance-related processes, including its governance framework.	Group Compliance
Group Actuarial Policy	Outlines basics for the Actuarial function (e.g., actuarial work, regulatory tasks, governance structure, fit and proper requirements).	Group Actuarial
Group Fit and Proper Policy	Policy to define the general Group fit and proper requirements for the key function members. Determination of the Group's key functions.	Group People and Culture
Group Outsourcing Policy	Definition of "outsourcing" of functions and services. Regulation of related requirements regarding the procedural and conceptual parameters of outsourcing along the outsourcing process, including control activities.	Group Operations, Organization and Data
Group Capital Management Policy	Establishes core principles and processes for the capitalization of the Allianz Group (and Allianz SE), including its subsidiaries. Defines key rules for planning and managing capital and capitalization levels (targets) at Group and operating entity level, based on regulatory requirements.	Group Treasury & Corporate Finance
Group Accounting and Reporting Policy	Outlines requirements regarding external reporting (IFRS, regulatory, esp. Solvency II). Forms part of controls around financial reporting, in particular as regards the related Statement of Accountability.	Group Accounting & Reporting
Group Remuneration Policy	Establishes general remuneration principles as well as general and specific compensation principles. Defines processes for the performance management, the remuneration system and plan review, and roles and responsibilities.	Group People and Culture
Group Legal Policy	Defines the fundamental principles of the Legal function within the Allianz Group, its most important responsibilities and tasks as well as its organizational framework.	Group Legal
Group IT and Information Security Policy	Defines the fundamental principles for the organizational and operational set-up of IT and Information Security within the Allianz Group, and outlines among others general requirements for the Internal Control System.	Group Technology

As an essential element for the steering of the Group, the corporate rules take into account the principles of proportionality and materiality to reflect the various business models and risk profiles of the Group's entities. Individual cases are decided on the basis of a proper weighting and assessment.

Based on these principles, all corporate rules generally apply to all of the related undertakings of Allianz SE. That said, exceptions and reliefs may apply depending on the nature, size, and complexity, as well as the business and risk profile of the undertaking, considering proportionality and local law. In particular, non-operating undertakings, such as non-strategic and non-operational holding companies, are exempt from most of the corporate rules.

To implement the Group's corporate rules at the local level, related undertakings need to either establish their own corporate rules in line with the Group's (this applies to (re)insurers from the European Economic Area) or directly apply the Group's rules. Consistent implementation of and adherence to the Group's corporate rules is ensured through several processes. On principle, each issuer of a Group corporate rule is responsible for regularly assessing the related undertakings' adherence to its corporate rules. After Solvency II came into force, each related undertaking in scope had to confirm its local implementation to Allianz SE's Board of Management by providing a Statement of Accountability.

B.1.4 Material changes to the System of Governance

The System of Governance Operating Model adopted by the Board of Management of Allianz SE in 2020 applies as of 2021. This so-called System of Governance Operating Model provides a clustering of all Group entities according to specific criteria and correspondingly defines the minimum requirements from a regulatory and internal governance perspective per each cluster. This is to more precisely address the respective business models and local specifics for the Group's entities (e.g., European/non-European entities, (re)insurance undertakings/non-insurance undertakings, regulated/non-regulated entities) as well as to provide transparency and consistency of System of Governance requirements across the Allianz Group. The System of Governance Operating Model is subject to regular review in order to adequately reflect ongoing developments and new insights.

B.1.5 Assessment of the adequacy of the System of Governance

B.1.5.1 Review process

The Allianz Group has established a structured process to internally review its System of Governance on a regular basis. The review takes place once a year and is followed by a formal resolution of the Board of Management of Allianz SE. This includes the determination of mitigating activities. The coordination of the process is assigned to the Group Governance and Control Committee under participation of relevant Group Centers and involvement of the Group's operating entities (OEs).

For the purpose of this internal governance review, a catalog of single elements has been identified which, in total, form the entire regulatory System of Governance of the Allianz Group. The objective of the regular review is to achieve an assessment of the adequacy of single elements as well as the entire System of Governance in accordance with the risk profile of the Group. In this respect, "adequacy assessment" shall be understood as a professional judgment whether the single governance element in question has been described, designed and implemented adequately with regard to the respective risk profile in order to achieve the related objectives.

The review of the entire System of Governance is performed continuously over a five-year period, at the end of which all identified single elements will have been assessed. For the year 2024, the Allianz Group has selected the following focus areas for the group-wide adequacy assessment:

- Accounting and Reporting,
- Capital Management,
- Document Management,
- Internal Control System,
- Culture, including risk and control culture.

In assessing the adequacy of these elements as well as of the entire System of Governance, specifically, the following sources were taken into account:

- Written self-assessments by the OEs (Statement of Accountability regarding Solvency II System of Governance Adequacy and Effectiveness), including qualified opinions regarding the

adequacy of the above single elements of the System of Governance.

- Annual review of written policies. Besides incorporating regulatory, organizational or operational changes, the review of these policies also addresses whether the current governance requirements are still adequate.
- Insights from the regulatory key functions and other relevant functions based on their functional competences.
- Insights from external reviews.
- Remediation of identified improvement areas.

B.1.5.2 Key results from the review of the governance system

Overall, the governance framework of the Allianz Group is appropriately and proportionately designed with regard to the respective risk profile and the risk strategy. It is designed to support and reflect the Allianz Group's business model. This relates to the organizational as well as to the operational set-up, which permit adequate risk management and effective controls within the Group, under consideration of the steering principles for the Allianz Group.

This result is being confirmed in 2024, especially by the adequacy assessments of the aforementioned single elements of the System of Governance. The self-assessments carried out by all OEs revealed that these elements are applied adequately overall with regard to each local risk profile as well as the risk profile of the Allianz Group, outlined in the following paragraphs:

Accounting and Reporting

Predominant implementation of the key requirements of the Allianz Group Accounting Policy, i.e.:

- Organizational set up:
 - Clearly defined tasks & responsibilities of the Function covering all Legal Entities of the OE scope are established. Clear segregation of tasks & responsibilities of the Function according to the Three-Lines-of-Defense-Model to avoid potential conflicts of interests is in place.
 - Nomination/dismissal of the local Accounting and Reporting Function holder (local Chief Accountant) is pre-approved with the head of Group Accounting and Reporting (Group Chief Accountant). Fit and Proper assessment has been performed and minimum training requirements are fulfilled.

- Clearly defined reporting lines of the Function are implemented. The Function has access to relevant information and is represented in relevant committees (e.g., Disclosure Committee, Reserve Committee, Tax Committee). Functional Reporting line of the local Chief Accountant to the Group Chief Accountant of the local CFO to the Group CFO, and of the local Chief Accountant to the OE management board is established.
- Adequate cooperation and adherence to and promotion of a sound governance, risk and compliance culture are ensured.
- Local Disclosure Committee in the flagship OEs is established.
- Up-to-date documentation of the organizational setup of the Function is available.
- Appropriate staffing of the Function in terms of capabilities and capacities is ensured. Work procedures and relevant content is known by the affected staff.
- Operational set up:
 - Up-to-date documentation of the operational structure of the Function is available.
 - The Group Accounting Manuals (IFRS and MVBS) and the Field Population Manual provided and maintained by Group Accounting & Reporting are adhered to and are accessible for all relevant employees.
 - Integrated Risk and Control System (IRCS)/Non-Financial Risk Management (NFRM) for Accounting & Reporting risks: An adequate and up-to-date OE IRCS/NFRM framework, according to the Group NFRM/IRCS Guideline, is in place. All relevant data is recorded in the ORGS System.
 - The CEO and CFO review and sign the Accounting Statement of Accountability (SoA), including all appendices thereto.
- LEs are capitalized adequately to withstand historical, parametric stresses following the Management Ratio Framework, ensuring the sustainability of the LEs under adverse scenarios, encouraging earlier remediation actions before the capitalization falls below the Minimum Regulatory threshold and assuring the dividend plan. A Management Ratio is agreed with Group Treasury & Corporate Finance (GTCF) and Group Risk (GR), pre-approved by the local Risk Committee on a yearly basis during the Planning Dialogue (“PD”) process. The Group Finance and Risk Committee (GFRC) reviews and recommends the local Solvency Risk Appetite to the Board of Management of Allianz SE for approval.
- Each LE performs a capital plan and communicates it to the Group during the PDs. As a general rule, any capital held in excess of the applicable Management Ratio over the three-year plan horizon is deemed excess capital and upstreamed to the Group.
- If a LE falls below its Management Ratio during the course of the year but stays above the Action barrier, it is still expected to pay out the planned dividend, while any adjustments will be considered over the remaining plan horizon; however individual circumstances may need to be reflected.
- An adequate quarterly monitoring process to manage LE capitalization is in place, including follow up on contingency plans in case a Local Solvency falls below the Alert barrier/Action barrier and reporting to the Local Risk Committee.

Document Management

Predominant implementation of the key requirements of the Allianz Standard for Information and Document Management (ASIDM), i.e.:

- Clearly assigned responsibilities for document management are in place, i.e., within Operations function and Legal function.
- A complete inventory of the systems used for the storage of “Relevant Documents” according to ASIDM (Digital Document Management System) is in place and maintained.
- A local Document Retention Schedule, covering at least the Minimum Document Retention Schedule according to ASIDM, has been defined and implemented in the Digital Document Management System for the “Relevant Documents” that must be retained for legal reasons and therefore protected from premature deletion and irreversible alteration.
- All Relevant Documents are stored in digital form and in a structured manner, capturing the required minimum set of attributes, either in the SharePoint Online DMS IPG5 or another

compliant Digital Documents Management System. Scanning solutions are available to employees to digitize relevant paper documents in the sense of the ASIDM.

- Non-relevant Documents shall be deleted within a reasonable period of time. All Digital Document Management Systems have automated deletion routines consistent with ASIDM as well as local Document Retention Schedule requirements.

With regard to the complete implementation of the above core requirements, some OEs have identified a need for improvement.

Internal Control System

Predominant implementation of the key requirements of the Allianz NFRM Functional Rule/Allianz Guideline for Integrated Risk and Control System (IRCS), i.e.:

- An adequate and up-to-date OE NFRM/IRCS framework, according to the Group NFRM Functional Rule/IRCS Guideline is in place and it comprises:
 - For NFRM, applying entities of a pre-assessment as well as a validation of the results of the pre-assessment, performance of Risk and Control Assessment Workshops, annual testing (according to a 5-year test plan adhering to NFRM minimum requirements especially on high-risk areas), reporting (Risk Committee or Board of Management) and follow up on deficiencies/issues.
 - For IRCS, applying entities of an annual scoping review process, performance of Risk and Control Assessment Workshops, annual testing (at least 20% of key controls), reporting (Risk Committee or Board of Management) and follow up on deficiencies/issues.
- All relevant data is recorded in the “Operational Risk and Governance System” (ORGS) as required.

Culture, including risk and control culture

The System of Governance element “Culture” is a cross-functional interdisciplinary topic reflected in different Internal Corporate Rules, e.g., the Allianz Code of Conduct. It reflects the set of activities, measures or communications which are predominantly adequately designed and implemented, i.e.:

Capital Management

Predominant implementation of the key requirements of the Allianz Group Capital Management Policy, i.e.:

- Clearly assigned responsibility for capital management is in place. The local Board of Management is responsible for ensuring an adequate Legal Entity (LE) capitalization under the respective capital constraints (regulatory requirements and rating agency requirements).

- Organizational culture is fostered that enables and supports the effective operation of the OE's system of governance, requiring an appropriate "tone-at-the-top" by the OE's Board of Management and further senior management that provides appropriate organizational values and priorities. Examples:
 - Appropriate standing of Key Functions and rules for fitness and propriety.
 - Clear roles & responsibilities (incl. documented assignment of tasks).
 - Adequate OE Whistleblowing/Speak Up mechanism is in place with clear roles and responsibilities, including the set-up of an Integrity Committee (or equivalent body) to coordinate whistleblowing cases, fraud cases or other cases of misconduct.
 - Segregation of Functions.
 - Rules to identify and appropriately manage areas of potential Conflicts of Interest.
 - Written Policy and Committee Framework in place.
- Code of Conduct (CoC) for driving a culture of integrity is communicated. Employees demonstrate adequate awareness and acknowledgement of CoC content. Appropriate actions are taken to remediate cases where a lack of integrity culture is identified.
- Promotion of a strong Risk Culture and involvement of the Risk Management Function/CRO in all material risk-related matters, including a common risk language across the OE, setting risk tolerance limits and incorporating it in determining performance.
- Appropriate Remuneration principles for senior management are defined.
- A system of Inclusive Meritocracy is in place and well reflected in the respective Inclusive Meritocracy Index.
- Strong demonstration of Leadership Values and behavior as shown in employee survey results (e.g., Allianz Engagement Survey, Pulse) or feedback from internal and external stakeholders (Multirater Feedback, Assessment Centers).
- Executive Accountability Regime (EAR) principles are established, including consequence management.

B.1.6 Remuneration policy and practices

B.1.6.1 Remuneration of the Allianz SE Board of Management

Key principles of the board remuneration

Remuneration is designed to be appropriate compared to peers, given the Allianz Group's range of business activities, operating environment, and business results achieved. The aim is to ensure and promote sustainable and value-oriented management of the company that is in line with our corporate strategy. The key principles are as follows:

- **Support of the Group's strategy:** The design of variable compensation, and in particular of performance targets, reflects the business strategy and sustainable long-term development of the Allianz Group.
- **Alignment of pay and performance:** The performance-based variable component of the remuneration of members of the Board of Management forms a significant portion of the overall remuneration, corresponding to 70% of the target compensation.
- **Sustainability of performance and alignment with shareholder interests:** A major part of the variable remuneration reflects longer-term performance, with deferred payout (64%), and is linked to the absolute and relative performance of the Allianz share price.

Determination of the remuneration system

The Board of Management's remuneration is decided upon by the entire Supervisory Board, based on proposals prepared by the Supervisory Board's Personnel Committee. If required, the Supervisory Board may seek outside advice from independent external consultants. The Personnel Committee and the Supervisory Board consult with the Chairperson of the Board of Management in assessing the performance and remuneration of Board of Management members. The Chairperson of the Board of Management is generally not involved in the discussion about their own remuneration. The Supervisory Board designs the remuneration system for the members of the Board of Management in accordance with the requirements of the German Stock Corporation Act (AktG) in its currently valid version as well as with regulatory requirements and the recommendations of the German Corporate Governance Code,

while ensuring clarity and comprehensibility. Feedback from investors is also considered.

Determination of and adequacy of the Board of Management remuneration

Based on the remuneration system, the Supervisory Board determines the target total compensation, and regularly reviews the appropriateness of the remuneration. This is based on both a horizontal comparison (i.e., with peer companies) and a vertical comparison (in relation to Allianz employees). Again, the Supervisory Board's Personnel Committee develops respective recommendations, if necessary, with the assistance of external consultants.

The structure, weighting, and level of each remuneration component should be adequate and appropriate.

Horizontal appropriateness

The Supervisory Board regularly reviews the remuneration of the Board of Management of Allianz SE, taking into account both the economic situation of the company and its sustainable performance. The remuneration is compared with the DAX 40 companies, as well as European and global industry peer groups. This comparison is based on the equally weighted size criteria of revenue, number of employees and market capitalization, which are used to determine the relative size, complexity and internationality of Allianz. In 2023, the Supervisory Board did not identify any need to adjust the remuneration of the Board of Management of the Allianz SE in the annual review of the appropriateness of the Board of Management remuneration applicable from 2024.

Vertical appropriateness

This comparison is based on the total direct remuneration of a member of the Board of Management and the average direct remuneration of an employee of the German companies of the Allianz Group. The Supervisory Board's decision in December is based on the factor resulting from this comparison for the previous financial year.

In 2024, the corresponding factor for the CEO to employees was "94" (2023: "68") and for regular Board members to employees "50" (2023: "36"). The increase in 2024 compared to 2023 for is due to the payout of the first LTI tranche of the revised remuneration system that was introduced in 2019.

Overview of the remuneration system of Allianz SE

The following diagram provides an overview of the structure and amount of the target remuneration of the members of the Board of Management in the financial year 2024.

Figure 1: Remuneration structure

CEO = Chief Executive Officer, BM = regular Board member.

1_ The cap of € 11,750 thou, or € 6,000 thou including pension contributions, effectively limits the LTI payout depending on the target achievement factor.

2_ Review of target achievement for sustainability on the basis of financial, environmental and social criteria.

Components of the Board of Management remuneration and their relation to strategy

Fixed remuneration

The fixed remuneration components comprise the base salary and perquisites. They serve to provide a competitive remuneration to attract and retain Board of Management members, whose experience and skills enable them to develop and successfully implement the

Allianz Group's strategy. They secure a reasonable level of income in line with market conditions, and promote a management of the company that is commensurate with risk.

Base salary

The base salary, which is not performance-related, is paid in twelve equal monthly installments.

Perquisites

Perquisites mainly consist of contributions to accident and liability insurances, tax consultant fees, and the provision of a company car and further individual perquisites if applicable. Perquisites are not linked to performance. The Supervisory Board regularly reviews the level of perquisites; a contractual annual cap applies. If an appointment to the Board of Management requires a change of

residence, relocation expenses are reimbursed to an appropriate extent.

Performance-based remuneration

The performance-based variable remuneration includes the short-term annual bonus and long-term share-based remuneration. The composition aims to balance short-term performance, longer-term success, and sustained value creation. The Supervisory Board ensures that the targets for the variable remuneration are challenging, sustainable, and ambitious.

Annual bonus

The annual bonus provides incentives for profitable growth and further developing the operating business by successfully implementing the business objectives for the respective financial year. In doing so, the overall responsibility for reaching the Group targets as well as the individual performance with regard to the operational responsibilities of the individual members of the Board of Management are taken into consideration.

The annual bonus is derived by multiplying the target achievement factor by the target amount for the annual bonus, and is paid out in cash after the end of the relevant financial year, with payment limited to a maximum of 150 % of the target amount.

Long-term incentive – LTI

The long-term, share-based compensation is oriented mainly towards the sustainable increase in the enterprise value. Taking the share price performance in absolute and relative terms as a basis, it encourages combining the interests of the shareholders with those of the members of the Board of Management.

Other stakeholder aspects are taken into consideration by setting strategic sustainability targets, whose achievement forms the basis for the final assessment at the end of the four-year contractual vesting period.

Almost two thirds (64%) of the variable remuneration is share-based, so as to adequately reflect the long-term performance of the company in the Board of Management remuneration.

Additional remuneration principles

Shareholding obligation and shareholding exposure

The members of the Board of Management are obliged to build up the following degree of share ownership within three years:

- **Chairperson of the Board of Management:** two times base salary, i.e., € 4,013 thou,
- **Regular Board of Management member:** one times base salary, i.e., € 1,024 thou.

Holding is required for the entire term of service on the Board of Management. Shares will be acquired through mandatory pay component conversion. In case of a base salary increase, the shareholding obligation increases accordingly. The holding obligation ceases with the end of the mandate.

In combination with the virtual shares, so-called restricted stock units (RSUs), accumulated over four years through the LTI plan, the Allianz SE Board of Management has significant economic exposure to the Allianz stock: It amounts to approximately 800 % of base salary for the Chairperson and approximately 700 % of base salary for a regular board member.

Malus/clawback

In order to ensure sustainable corporate development and to avoid taking inappropriate risks, variable remuneration components may not be paid, or payment may be restricted, in the case of a significant breach of the Allianz Code of Conduct or regulatory Solvency II policies or standards, including risk limits.

In the same way, variable remuneration components already paid may be subject to a clawback for three years after payout. Additionally, a reduction or cancellation of variable remuneration may occur if the supervisory authority (BaFin) requires this in accordance with its statutory powers.

Pension contribution

In line with Allianz Group's business model as one of the leading providers of company pension products, the company also attaches great importance to an attractive company pension scheme, both for employees and for the Board of Management. To provide competitive and cost-effective retirement and disability benefits, company contributions to the defined-contribution pension plan "My Allianz Pension" are invested with a guarantee for the contributions paid but no further interest guarantee.

With regard to the Board of Management, the Supervisory Board decides each year whether a budget is provided and, if so, to what extent. The current pension contribution generally represents 15% of the target remuneration of the Board members. The contribution level

for employees in Germany, measured against the target remuneration, is not significantly below the 15% mark for the Board of Management.

Apart from cases of occupational or general disability, the earliest age a pension can be drawn and the "My Allianz Pension" pension plan is 62. Should Board membership cease before the retirement age is reached, accrued pension rights are maintained if vesting requirements are met.

Members of the Board of Management may have additional pension entitlements under former pension plans based on previous positions in the Allianz Group or due to membership of the Board of Management prior to 2015. Payments of social insurance contributions abroad required by Allianz in individual cases may also give rise to additional pension entitlements.

Payout cap

In accordance with §87a (1) sentence 2 (1) AktG and the recommendations of the German Corporate Governance Code, the Supervisory Board has determined a remuneration cap.

Thus, the actual payout for the underlying financial year, comprising the base salary, variable remuneration and pension service cost, will be capped at maximum € 11,750 thou for the Chairperson of the Board of Management, and at € 6,000 thou for a regular member of the Board of Management. If the remuneration for the financial year exceeds this amount, compliance with the maximum limit will be ensured by reducing the payout of the long-term variable remuneration accordingly.

This payout cap principle was introduced for the first time for the financial year 2019. Given that the actual amount of the paid out long-term variable remuneration cannot be determined until after vesting and the final sustainability assessment, compliance with the payout cap is reported on for the first time in the Remuneration Report for the financial year 2024.

Deviation from the remuneration system

The Supervisory Board can temporarily deviate from the remuneration system in exceptional circumstances in accordance with the statutory requirements (§87a (2) AktG), if this is necessary in the interests of the long-term welfare of the company. The assessment may take into account both macroeconomic and company-related exceptional circumstances, such as impairment of the long-term viability and profitability of the company. The deviation requires a prior proposal by the Personnel Committee.

The components of the remuneration system from which deviations may be made in exceptional cases include in particular the base salary, the annual bonus and the long-term incentive (LTI), including their relationship to each other, their respective assessment bases where applicable, the target setting and target achievement assessment principles, and the determination of any payout and payment dates. The duration of the deviation shall be determined by the Supervisory Board at its due discretion but should not exceed a period of four years. In a crisis situation, for example, this principle is intended to allow the appointment of a new board member, e.g., with crisis management expertise, with a remuneration structure that temporarily deviates from the remuneration structure.

In the financial year 2024, the Supervisory Board did not make use of the option to deviate from the remuneration system.

Remuneration adjustment

The Supervisory Board is also entitled to take appropriate account of extraordinary unforeseeable developments when determining the amount of the variable remuneration components. This rule takes up a recommendation of the German Corporate Governance Code and allows for the adjustment of the remuneration in rare unforeseeable exceptional cases.

Conceivable cases of application include, for example, significant changes in accounting rules, or in the tax or regulatory framework, as well as catastrophic events not yet known at the time of target setting. The application of this rule may also lead to a reduction in the variable remuneration.

The Supervisory Board may also adjust the target remuneration of the members of the Board of Management, insofar as this is appropriate to ensure that the remuneration of the Chairperson of the Board of Management or a regular member of the Board of Management is appropriate with regard to their duties and performance. In doing so, it shall take into account the horizontal and vertical comparison of the Board of Management remuneration. The aim of this rule is to moderately adjust Board of Management remuneration on the basis of horizontal and vertical salary trends, and thus to avoid major salary increases.

It does not constitute an automatic adjustment but requires a justified decision by the Supervisory Board in each case. Such a moderate adjustment of the target remuneration does not in itself represent a significant change to the remuneration system. These adjustments or deviations must be justified in detail in the respective Remuneration Report for the financial year. The Remuneration Report

is prepared in accordance with ARUG II and submitted to the Annual General Meeting for approval.

Termination of service

Board of Management contracts are limited to a period of five years. For new appointments, a shorter period of up to three years is provided based on the recommendation by the German Corporate Governance Code.

Severance payment cap

Payments for early termination to board members with a remaining term of contract of more than two years are capped at twice the annual compensation, consisting of the last financial year's base salary and 100% of the variable target compensation. If the remaining term of contract is less than two years, the payment is pro-rated for the remaining term of the contract. Contracts do not contain provisions for any other cases of early termination of Board of Management service.

In the event of a contractually agreed non-compete clause, a severance payment is offset against compensation resulting from the non-compete clause in case of premature termination of service.

Transition payment

Board members appointed before 1 January 2010 are eligible for a transition payment after leaving the Board of Management. The transition payment comprises an amount corresponding to the most recent base salary (paid for a period of six months), plus a one-time payment of 25% of the target variable remuneration at notice date. Where an Allianz pension is due at the same time, such pension is deducted from the monthly transition payments. In the event of a contractually agreed non-compete clause, the remittance of the transitional payment will be offset against the payment resulting from the non-compete clause.

Miscellaneous

Internal and external board appointments

When a member of the Board of Management simultaneously holds an appointment at another company within the Allianz Group or their joint ventures with outside partners, the full amount of the respective remuneration is transferred to Allianz SE.

In recognition of related benefits to the organization, and subject to prior approval by the Supervisory Board of Allianz SE, board members are also allowed to accept a limited number of non-

executive supervisory roles at appropriate external organizations. In these cases, 50% of the remuneration received is paid to Allianz SE.

The respective board member will retain the full remuneration for that position only if the Allianz SE Supervisory Board classifies the appointment as a personal one (*ad personam*). Any remuneration paid by external organizations will be itemized in those organizations' annual reports; its level will be determined by the governing body of the relevant organization.

Variable remuneration system

Target achievement factor to determine the variable remuneration

The calculation of variable remuneration follows a transparent and simple system. The annual bonus and LTI allocation are based on only two Group financial targets for the relevant financial year: operating profit and net income attributable to shareholders, each at 50 %. The resulting target achievement is adjusted by an individual contribution factor (ICF) in the range of 0.8 to 1.2, which reflects both the results of the business division and the performance of the individual board member. If targets are not met, the variable compensation can be reduced to zero. If targets are significantly exceeded, the target achievement is limited to 150%.

Group financial targets

The Group financial targets are based on equally weighted targets for Group operating profit and Group net income attributable to shareholders. Adjustments are only applied to acquisitions and disposals that account for more than 10% of the Group's operating profit or net income attributable to shareholders, or that have a value-adding effect from a risk management perspective (e.g., portfolio transfers) and were not yet known at the time the plan was prepared. This regulation is intended to prevent meaningful transactions from having a negative impact on the remuneration of the Management Board.

Operating profit highlights the underlying performance of ongoing core operations.

Net income attributable to shareholders is the profit after tax and non-controlling interests (minorities). Furthermore, the net income forms the basis for the dividend payout and for the return on equity calculation. Both key performance indicators (KPIs) are important steering parameters for the Allianz Group and therefore reflect the level of implementation of the Group's strategy.

The Group's financial target achievement is limited to a maximum of 150 % and can drop to zero.

The minimum, target, and maximum values for the Group financial targets are set annually by the Supervisory Board. These are documented for the respective next financial year and published ex-post in the Remuneration Report.

Individual performance indicators

The Group financial target achievement is multiplied by the ICF for each member of the Board of Management. The ICF is based on an assessment by the Allianz SE Supervisory Board of performance, sustainability and strategic goals, based on KPIs reflecting the respective Board member's area of responsibility and their personal contribution.

- **Strategic priority:** An individual strategic priority will be set for every Board member at the beginning of each performance year, linked to a corresponding KPI and qualitatively assessed by the Supervisory Board. In addition, overarching strategic goals that apply to all Board members are set.
- **Performance (business division targets):** For Board members with business-related division responsibilities, the contribution to the financial performance is based on various indicators of profitability (e.g., operating profit and net income) and productivity (e.g., expense ratio) for the respective business division. For Board members with a functional focus, division-specific performance targets are determined based on their key responsibilities, and are qualitatively assessed.
- **Sustainability targets:** Non-financial sustainability targets take into account customer satisfaction (e.g., digital Net Promoter Score (dNPS), employee engagement (e.g., Allianz Engagement Survey), and leadership quality. The assessment of the individual leadership quality also includes a review of behavioral aspects, such as customer orientation, collaborative leadership, entrepreneurship, and trust (e.g., corporate social responsibility, integrity, and sustainability as measured by the greenhouse gas reduction of Allianz companies and by the development of a roadmap to reduce CO₂ emissions in the context of capital allocation).

Additional information, in particular regarding the annual sustainability targets for the Allianz SE Board of Management can be found in the "Non-Financial Statement" for the Allianz Group and Allianz SE.

Determining the individual contribution factor (ICF)

The Supervisory Board determines the ICF for each member of the Board of Management based on the fulfillment of the individual performance indicators. Most of the performance indicators are provided with quantitative criteria, and therefore offer a sufficiently concrete basis for the combined assessment.

Each ICF category – strategic priority, performance, and sustainability – has a significant weighting, and all three categories are of equal importance and contribution to the overall assessment. However, the individual indicators are not weighted on a fixed percentage basis, so that the ICF is not determined on the basis of a formulaic calculation. This allows the Supervisory Board to take appropriate consideration of the individual criteria and to react appropriately to changes in priorities during the year. In particular, significantly underperforming in one category should allow a low overall rating without being balanced out by the other indicators.

Since the performance is determined without a specified weighting, the ICF covers a narrow range of 0.8 to 1.2.

Long-term incentive (LTI) design

The long-term, share-based compensation component makes up the largest portion of variable compensation. It promotes alignment with shareholders and reflects the sustainable implementation of the company's long-term strategy. The LTI is based on the performance in absolute and relative terms (i.e., versus competitors) of the Allianz share. Furthermore, the long-term development of KPIs is reflected in the deferred sustainability assessment following the four-year contractual vesting period.

- **Grant and contractual vesting period:** The LTI is granted annually in the form of virtual Allianz shares (RSUs). The number of RSUs to be granted corresponds to the LTI allocation amount, divided by the allocation value of an RSU at grant:

- The LTI allocation amount is derived by multiplying the LTI target amount by the annual bonus achievement factor, and capped at maximum 150% of the target level.
- The RSU allocation value is based on the ten-day-average Xetra closing price of the Allianz stock following the annual financial media conference¹. As RSUs are virtual stock without dividend payments, the relevant share price is reduced by the net present value of the expected future dividend payments during the four-year contractual vesting period.

The LTI grant is followed by a contractual vesting period of four years. After that period, the LTI amount to be paid is determined based on the relative performance of the Allianz share, the relevant share price, and the results of the sustainability assessment.

- **Relative performance versus peers:** Besides the absolute share-price development, the LTI payout takes the relative performance of the Allianz share into account. The total shareholder return (TSR) of the Allianz share is benchmarked against the TSR of the STOXX Europe 600 insurance index by reflecting the relation of the total performance of the Allianz share ("Allianz TSR") and the total performance of the STOXX Europe 600 insurance index ("Index TSR") between the start and end of the four-year contractual vesting period. The payout is based on the TSR performance factor, which is calculated as follows:

- At the end of the contractual vesting period, the difference between the Allianz TSR and the Index TSR is determined in percentage points; the result is multiplied by "2": As the comparison with competitors and the market is of outstanding importance, the outperformance/underperformance is weighted twofold.
- To determine the factor, 100 percentage points are added to the result. Example: 1 percentage point outperformance results in a relative performance factor of 102 %; 1 percentage point underperformance results in a relative performance factor of 98 %.

In order to avoid incentivizing excessive risk-taking, the relative TSR performance factor is limited: it can vary between zero (for underperformance of the index by -50 percentage points or lower)

¹The fair value of the RSUs, on the other hand, is determined based on standard market simulation methods. In this process, additional parameters are taken into account, such as the structure of interest

rates, the volatility of the Allianz stock and the index, the correlation, as well as the expected dividends. The "Allocation Value" of the RSUs which is used for the calculation of the number of RSUs allocated to

the members of the Board may differ from the fair value, as a simplified calculation method is applied for reasons of traceability and transparency.

and 200% (for outperformance of the index by minimum +50 percentage points or higher).

- **Sustainability assessment:** Prior to the payout of each LTI tranche, the Supervisory Board determines, following a preliminary assessment by the Personnel Committee, whether there are any sustainability-related concerns regarding a full payout. If so, payment of the tranche may be canceled in full or in part.

Subject of the sustainability assessment are:

- compliance breaches,
- balance sheet issues, such as reserve strength, solvency, indebtedness, and ratings,
- KPIs entailed in the individual board members' targets, such as dNPS, employee satisfaction, and climate targets.

The assessment is made applying a comparable basis; i.e., any regulatory changes, changes in accounting regulations, or changes in calculation methods for the KPIs in question are taken into account.

- **Allianz share performance, payout, and cap:** Following the end of the four-year contractual vesting period, the granted RSUs are settled in cash, based on the ten-day average Xetra closing price of the Allianz SE share following the annual financial media conference in the year the respective RSU plan vests, multiplied by the relative TSR performance factor, and adjusted by the sustainability assessment, if necessary. The relevant share price is capped at 200% of the grant price. Likewise, the relative TSR performance factor is capped at a maximum of 200%. Taking into account the overall compensation cap (€ 6,000 thou for a regular board member and € 11,750 thou for the Chairperson of the Board of Management), the LTI payout in relation to the LTI target – which deviates from the individual LTI component caps – is limited.

Outstanding RSU holdings are forfeited should a board member leave at their own request or be terminated for important cause.

B.1.6.2 Remuneration of the Allianz SE Supervisory Board

The remuneration of the Supervisory Board is governed by the Statutes of Allianz SE and the German Stock Corporation Act. Furthermore, the structure of the Supervisory Board's remuneration is regularly reviewed with regard to its compliance with German, European, and international corporate governance recommendations and regulations.

Remuneration principles

- The set total remuneration is both aligned with the scale and scope of the Supervisory Board's duties and appropriate in view of the Company's activities and its business and financial situation. This also reflects the contribution made by the monitoring activity of the Supervisory Board to the long-term development of the Company.
- The remuneration takes into account the individual functions and responsibilities of Supervisory Board members, such as Chairperson, Deputy Chairperson, or Committee memberships.
- The remuneration structure allows proper oversight of management as well as independent decisions on executive personnel and remuneration.
- Given Allianz's relative size and complexity as well as its sustainable performance, the remuneration of the Supervisory Board is oriented towards the fourth quartile of the supervisory board remuneration of peers in the DAX.

Remuneration structure and components

The remuneration for the Supervisory Board of Allianz SE provides for a fixed remuneration. Supervisory Board members who had only served on the Supervisory Board during part of the financial year receive one twelfth of the remuneration for each month of service commenced. This shall apply accordingly for membership of Supervisory Board committees.

The Supervisory Board's Remuneration System was presented to the Annual General Meeting of Allianz SE on 4 May 2023 and was approved with a majority vote of 95.07%.

Fixed annual remuneration

The remuneration of a Supervisory Board member consists of a fixed cash amount paid pro rata temporis after the end of the respective quarter of the financial year. Each regular Supervisory Board member receives a fixed remuneration amounting to € 150 thou per year. The Chairperson receives € 450 thou, each Deputy Chairperson receives € 225 thou.

Committee-related remuneration

The Chairperson and members of the Supervisory Board committees receive additional committee-related remuneration which is also paid pro rata temporis after the end of the respective quarter of the financial year. The committee-related remuneration is as shown in the graph below:

Figure 2: Committee-related remuneration

Attendance fees and expenses

In addition to the fixed and committee-related remuneration, members of the Supervisory Board receive an attendance fee of € 1,000 for each Supervisory Board or committee meeting they attend in person. Should several meetings be held on the same or consecutive days, the attendance fee will only be paid once. The attendance fee is payable after the respective meeting.

In addition, the Supervisory Board members are reimbursed for expenses incurred in connection with their Supervisory Board activities. The company provides insurance coverage and technical support to the Supervisory Board members to an extent reasonable for carrying out their Supervisory Board duties.

B.1.6.3 Remuneration principles for Supervisory Boards or comparable functions within the Allianz Group

To avoid a conflict of interest, members of Supervisory Boards only receive fixed remuneration.

The following principles apply for compensated members of Supervisory Boards:

Total remuneration is set at a level consistent with the scale and scope of the Supervisory Board's duties. It also takes into account the company's activities, business and financial situation. The remuneration structure also considers the individual functions and responsibilities of Supervisory Board members, such as chair, vice-chair or committee mandates.

B.1.6.4 Remuneration of other executives (Allianz Global and Senior Executives¹) and key function holders

Responsibility

Compensation committees

The Allianz Group operates an effective system of compensation committees across its major local companies and global lines of business, and periodically reviews and decides on remuneration guidelines and practices for top executive levels of the Allianz Group, the Allianz Global and Senior Executives, key function holders and risk takers. Based on the specific nature, scale and scope of each business, the appropriate level of compensation committee oversight has been determined by the respective Board of Management.

¹As well as risk takers.

The Group Compensation Committee (GCC) oversees the design, governance, and operation of the group-wide compensation systems and plans, as well as their further development. The GCC monitors compliance of the Allianz Group's compensation system with relevant law. It also ensures that the compensation of Allianz Global and Senior Executives¹ is adequate, and monitors the implementation of its own decisions. The committee has direct responsibility for the Allianz Global Executives, Allianz Senior Executive Azpire x participants, key function holders, and risk takers compensation packages, as specified in its rules of procedure.

Membership in the GCC requires approval by the Allianz SE Board of Management and reflects the nature of the Allianz Group's business model and the breadth and depth of expertise required for Group oversight to comply with the relevant remuneration regulation. Cross-representation on different committees (i.e., compensation, risk, finance, and capital committees) supports effective information flows.

The responsibilities of local compensation committees are similar, also covering compensation systems and oversight of their respective executives. Local compensation committees typically comprise Chief Executive Officers, business division heads or the respective member of the Allianz SE Board of Management, Chief Financial Officers or Chief Operating Officers, a representative of a Key Function, preferably of the Risk and Legal and/or Compliance function, and the Head of Human Resources.

Key principles

Remuneration structures and incentives are designed to encourage sustainable value-creating activities for Allianz. Allianz therefore uses different remuneration structures and strategies across the Group, which take into account the specific roles of executives, the different business activities, and local remuneration and regulatory environments. Key objectives of the executive remuneration strategy are to:

- align pay with both the individual's performance and their achievement of financial and strategic goals, and to do so in a way consistent with shareholder interests,
- vary the mix and weighting of fixed versus variable remuneration and short-term versus long-term incentives to reflect executives' influence on the results of the Group, business division, or related undertaking, and

- provide compensation that is both competitive and in line with legal requirements as well as prevailing market conditions. The base salary recognizes the scope and responsibilities of a position, while the variable compensation enforces the Allianz Group's culture of meritocracy.

Remuneration components and target-setting principles

Across the Group, the key basis for executive compensation is the compensation model used by the Allianz insurance businesses. It provides for a balance of fixed and variable remuneration components, with a stronger focus on longer-term results when determining the actual total remuneration. In keeping with applicable regulations, the remuneration of senior executives in most of our Group companies and divisions is composed of the following components (although the relative weight of components may vary in the individual case):

Base salary

The base salary is the fixed remuneration component. Annual adjustments take into account the person's sustained performance in the respective position, the performance of the company, general economic conditions, and compensation-related market conditions. The share in total remuneration of the fixed component balances performance incentives to avoid excessive risk-taking. The base salary is expressed as an annual cash sum paid in equal installments.

Variable remuneration

Variable remuneration is designed to encourage and reward achievement of both annual performance goals and the sustainable success of the Group as well as of local companies and global lines of business. It is aligned with Allianz's risk positioning strategy and structured in such a way that the executive's personal contributions are rewarded. Annual targets, both quantitative and qualitative, are set and communicated prior to the performance period.

General target-setting principles

Selected key performance indicators from the financial plans form the basis for the financial and operational targets, which shall reflect the strategy of the Group, the related undertaking, and/or the business, and shall be designed to avoid excessive risk taking and conflicts of

interest, as well as to appropriately reflect the material risks and their time horizon. Targets shall include, where appropriate, ESG (environmental, social, governance)-related performance indicators and shall be designed to avoid excessive taking of ESG risks.

Performance targets consist of financial targets of the related undertaking and individual targets.

Individual performance is assessed against qualitative as well as responsibility-related quantitative targets.

As part of the assessment of the individual qualitative target achievement, the personal contribution to the Allianz strategy is reviewed along with behavioral aspects. They comprise customer orientation, collaborative leadership, entrepreneurship, and trust (e.g., with regard to sustainability, corporate social responsibility, and diversity as well as integrity).

A multi-rater process supports the assessment of the individual qualitative behavioral targets: For each executive and member of the Board of Management, feedback is collected from their peers or fellow board members and their direct reports as well as their line manager. Furthermore, the executives perform a self-assessment.

The variable compensation of key function holders and staff shall be independent from the performance of the operational units and areas that are submitted to their control. This shall, however, not prevent the setting of targets based on Group performance indicators or as applicable related-undertaking performance indicators, as long as this does not run contrary to the control function, and is subject to compliance with local regulatory requirements.

Variable remuneration plans and components

Most senior executives, key function holders, and risk takers are participants in the **Allianz Azpire x or Azpire + scheme**. Beyond these, there are no specific compensation systems or components for key function holders.

The Azpire schemes address the specific compensation requirements that exist for the insurance business.

Participation in Azpire is mandatory for Allianz Global Executives and Allianz Senior Executives but excludes Allianz Asset Management, for which business-specific and market-aligned variable compensation schemes are offered².

With the Azpire schemes, Allianz balances fixed and variable compensation. The relative weighting of fixed versus variable compensation is regularly reviewed against applicable regulation and

1_Based on internal ranking.

2_For operations that represent either asset management or alternative investment business for Allianz or third-party assets, incentive programs and remuneration structures are consistent with the risk positions

and competitive markets in which they operate. These may deviate from the general Allianz variable remuneration program descriptions and may include profit sharing, co-investment, carry and other cash-

market trends. The volume and relative weighting of the variable component should depend on the level of seniority and the position, i.e., higher percentages of variable compensation relative to fixed compensation should typically apply to more senior positions.

– Annual bonus

The annual bonus is paid in cash following the annual performance assessment. Depending on the results of the performance assessment, the pay-out may be less than 100% of the target bonus (= malus).

In the additive system (Azipire +), the overall target achievement for the annual bonus is calculated by adding the percentage level of the achievement of the financial targets as described above in the relevant financial year and the individual performance factor, both equally weighted.

The range for the financial targets and the individual performance factor lies between 0% and 200%. The maximum overall target achievement is currently capped at 165%. By way of exception, the overall target achievement may be increased to a maximum of 200%, subject to the consent of the relevant approval body.

In the multiplicative system (Azipire x), the achievement of the financial targets will be multiplied by an individual contribution factor which ranges between 0.8 and 1.2. The financial target achievement has a range of 50 – 150%. The overall target achievement is currently capped at 150%. By way of exception, the overall target achievement may be increased to a maximum of 200%, subject to the consent of the relevant approval body.

– Share-based remuneration

Share-based remuneration is a virtual share award referred to as “Restricted Stock Units” (RSUs) with a deferred payout after four years.

The RSU allocation amount is determined by multiplying the target amount by the overall achievement of financial and individual targets, according to the principles of the Azipire+ and Azipire x calculations as outlined for the annual bonus.

The number of RSUs allocated is derived by dividing the allocation amount by the fair value of an RSU at the time of grant. Following the end of the four-year vesting period, the company makes a cash payment based on the number of RSUs granted, as well as on the ten-day average Xetra closing price of the Allianz stock following the annual financial press conference in the year the respective RSU plan expires.

The payout of Allianz Global Executives, Allianz Senior Executive Azipire x participants as well as risk taker position holders shall be subject to a sustainability assessment by the company's relevant body. Based on this sustainability assessment, the company's relevant body is entitled, at its proper and due discretion, to fully or partially reduce the payout amount.

To avoid extreme payouts, the RSU payout level is capped at 200% of the share price at grant. Outstanding RSU holdings are forfeited should an executive leave at their own request or be terminated for cause.

Malus

Variable remuneration components may not be paid, or payment may be restricted in particular in the event of a significant breach of (i) a statutory provision, court decision or administrative order to be observed in the context of the employment relationship or (ii), the risk limits applicable to the employee, the Allianz Code of Conduct and/or any other Allianz policy or binding instruction in the context of the employment relationship.

Clawback

The variable compensation system for all Azipire x Participants must include a clawback provision. For those employees, a compliance breach may lead to a clawback, i.e., the company may demand the employee to repay all, or part of the variable remuneration paid out.

Pensions and similar benefits for other executives (Allianz Global and Senior Executives) and key function holders in Germany

To provide competitive and cost-effective retirement and disability benefits, company contributions to the current pension plan “My Allianz Pension” are invested in a fund with a guarantee for the contributions paid, but no further interest guarantee. Upon retirement, the accumulated capital is paid out as a lump sum or, alternatively, can be converted into a lifetime annuity. Each year, the Group decides whether and to what extent a budget is provided, also taking into account the target pension level. This budget includes a risk premium paid to cover death and disability. The retirement age usually lies between 60 and 63, except for cases of occupational or general disability for medical reasons. In these cases, it may become payable earlier and an increase by projection may apply. In the case of death,

a lump sum – again convertible into an annuity – will be paid to dependents. Should board membership or employment cease before retirement age for other reasons, the accrued pension rights are maintained if vesting requirements are met.

This general system also applies for other key function holders and executives (Allianz Global and Senior Executives) in Germany. The annual budget decision is the responsibility of the respective Board of Management or the respective Supervisory Board in Germany.

Termination of service

Severance payment

Severance payments for terminations initiated by the company take into account the individual and the respective company's performance and are in line with the applicable local legal requirements, as well as prevailing market conditions.

B.1.6.5 Related party transactions

In 2024, there were no material transactions between the Allianz Group including Allianz SE and the members of the Board of Management or the Supervisory Board.

Changes in holdings of major shareholders have to be disclosed to and published by the issuer when reaching, exceeding, or falling below notifiable voting right thresholds. The release of voting rights notifications is performed by EQS Group AG. The following major shareholdings exist and have been reported to us pursuant to §20(1) or (4) AktG or pursuant to §§33, 34 ff. WpHG:

- By way of notification dated 20 December 2024, BlackRock Inc., Wilmington, Delaware, United States of America, informed us in the course of a voluntary group notification with triggered threshold on subsidiary level its voting rights pursuant to §§33, 34 WpHG as of 17 December 2024 amounted to 6.90% (represented 26,640,268 shares); its holdings in instruments pursuant to §38(1) No. 1 WpHG as of 17 December 2024 amounted to 0.07% (represented 284,461 voting rights absolute); and its holdings in instruments pursuant to §38(1) No. 2 WpHG as of 17 December 2024 amounted to 0.01%

(represented 38,142 voting rights absolute). The total position as notified on 20 December 2024 amounted to 6.98%.

Transactions between Allianz SE and its subsidiaries that are to be deemed related parties have been eliminated in the consolidation. Business relations with joint ventures and associates are set on an arm's length basis and are mainly related to loans and reinsurance agreements.

As of 31 December 2024, based on IFRS values, loans to associates and joint ventures amounted to € 2,808 mn (2023: € 2,582 mn), with interest received of € 150 mn (2023: € 145 mn).

B.2 FIT AND PROPER REQUIREMENTS

B.2.1 Policy

The Group Fit and Proper Policy (GFPP) sets out principles, criteria, and processes which ensure the fitness and propriety of the Supervisory Board members, the senior management, and key function holders and staff (as defined in the GFPP). The GFPP contains a definition of fitness and propriety, and the fitness and propriety requirements for the various relevant positions:

- Members of the Supervisory Board must collectively possess the qualifications, expertise, and knowledge to appropriately and independently fulfill the Board's tasks and responsibilities, in particular with regard to the overseeing and advising of the respective Board of Management. Each member must understand the business and be able to assess the risks involved, as well as collectively enforce changes in management.
- Members of the Board of Management must collectively possess appropriate qualifications, knowledge, and expertise on insurance and/or asset management and financial markets, financial and actuarial analysis, regulatory framework and requirements, and Allianz's business strategy, business model, risk management in the insurance management, including an understanding of related aspects of information technology, and the System of Governance of the Allianz Group. All members must possess the qualifications, experience, and knowledge required to fulfill the specific responsibilities assigned to them within the Board of Management.
- The remaining senior management members must possess the equivalent qualifications, experience, and knowledge as outlined for Board of Management members to the extent relevant for their particular scope of responsibility.
- All key function holders (as defined in the GFPP) must possess the fitness required to fulfill the tasks assigned to them by the policy of the respective key function, if any, and applicable law. For the key function staff (as defined in the GFPP), the respective fitness requirements apply accordingly, taking into account their respective positions, roles, and responsibilities.
- Holders of the Risk Management function must possess the technical and business knowledge to support the management of

the operating entity's risk profile, balancing risk, return and solvency considerations. Specific activities include the reporting of risk exposures and limits, as well as capital and solvency requirements, the oversight of the integrated risk and control system and non-financial risk management covering reporting risks, compliance risks and other operational risks (e.g., information security, IT, business continuity, outsourcing, legal), as well as working together with the First Line and other Second Line of Defense functions in managing these risks. Detailed requirements are outlined in the Allianz Group Risk Policy.

- Holders of the Compliance function must possess the qualification, experience and knowledge required, relative to the responsibilities of their role, to manage the risk of legal or regulatory sanctions, significant financial loss or loss to reputation that the operating entity or the Allianz Group may suffer as a result of not adhering to the current laws, regulations, and regulatory requirements that are relevant to the operating entity's operations. Detailed requirements are outlined in the Allianz Group Compliance Policy.
- Holders of the Internal Audit function must have the qualifications, experience, and knowledge required to evaluate the adequacy and effectiveness of the System of Governance, to issue recommendations – in particular with regard to potentially existing deficiencies in the Internal Control System and in the level of compliance with corporate rules – and to verify the execution of possible decisions taken.
- Holders of the Actuarial function must have the qualifications, experience, and knowledge required to coordinate and validate the calculation of technical provisions for the Solvency II market value balance sheet, and to provide recommendations and opinions on the management of insurance/underwriting risks, the reinsurance recoverables in place, and on the operating entity's risk management system under Solvency II.
- Holders of the Legal function must have the qualifications, experience, and knowledge required to exercise general oversight of all areas of the company with regard to compliance with applicable laws, rules, and regulations, as well as to interpret statutory law, monitor relevant legal changes, and provide legal advice to senior management.

- Holders of the Accounting and Reporting function must possess the qualifications, experience, and knowledge required to provide reliable financial information to senior management, regulators, and the public by preparing quarterly and annual closings, regular reports, plans and forecasts for IFRS, local accounting requirements, and Solvency II reports.

B.2.2 Processes

The GFPP provides guidance on how fitness and propriety are assessed, based on the findings and information gathered during recruiting, regular reviews, and ad-hoc reviews. It also provides guidance on the consequences of negative assessments.

The assessment process with regard to recruiting into a new position is as follows: For each position in scope, a job description including a profile of requirements is established, against which candidates' profiles are compared. The information contained in candidates' profiles, e.g., on education, is verified through background checks. Subsequently, several interviews are held with members of the Board of Management or the Supervisory Board, depending on the position. In addition, an assessment is provided by a human resources professional or a responsible person within human resources. The assessment extends to the candidates' propriety as evidenced by, e.g., Certificates of Good Conduct.

Essential procedures to ensure individuals' fitness and propriety subsequent to their appointment include performance reviews for all persons in the scope of the GFPP, as well as Talent Discussions and Performance and Talent Dialogues for senior management and key function members, which both take place on an annual basis. In the event of extraordinary situations raising questions regarding a person's fitness or propriety (e.g., due to a breach of the Allianz Code of Conduct), ad-hoc reviews of that fitness and propriety are carried out. Constant professional training shall ensure that individuals in question meet the specific fitness requirements; in addition, training on ethical business behavior, anti-fraud, and anti-corruption is offered to provide employees with clear rules for proper conduct.

B.3 RISK MANAGEMENT SYSTEM INCLUDING THE OWN RISK AND SOLVENCY ASSESSMENT

B.3.1 Risk management framework

As a provider of financial services, we consider risk management, including an internal control system (ICS), to be a core competency and an integral part of our business. Our risk management framework covers all operations and subsidiaries within the Group in proportion to the inherent risks of their activities, ensuring that risks across the Group are consistently identified, analyzed, assessed, and adequately managed. The key elements of our risk management and internal control system framework are:

- promotion of a strong risk management culture, supported by a robust risk governance structure;
- consistent and proportional application of an integrated risk capital framework to protect our capital base and support effective capital management;
- integration of risk considerations and capital needs into management and decision-making processes by attributing risk and allocating capital to business segments, products, and strategies.

Our risk management system is based on the following four pillars:

- **Risk identification, assessment and underwriting:** A robust system of risk identification, assessment and underwriting forms the foundation for appropriate risk management decisions. Supporting activities include standards for underwriting, valuation methods, approvals for individual transactions or new products, emerging, operational or top risk assessments, as well as liquidity risk and scenario analyses, amongst others.
- **Risk strategy and risk appetite:** Our risk strategy defines our risk appetite in line with our business strategy. It ensures that rewards are appropriate based on the risks taken and the required capital. It also ensures that delegated decision-making bodies work in line with our overall risk-bearing capacity and strategy.
- **Risk reporting and monitoring:** Our comprehensive qualitative and quantitative risk monitoring and reporting framework

provides management with the transparency needed to assess whether our risk profile remains within the approved limits and to identify emerging issues and risks quickly. For example, risk dashboard and limit utilization reports as well as scenario analyses and stress tests are regularly prepared and communicated.

- **Communication and transparency:** Transparent risk disclosure provides the basis for communicating our strategy and performance to internal and external stakeholders, ensuring a sustainable positive impact on valuation and financing. It also strengthens risk awareness and risk culture.

Processes and triggers are in place to assess the prospective appropriateness of the risk management system, e.g., in the context of changes to the business and risk strategy.

External auditors are independently and regularly reviewing the Allianz Group's risk governance as well as performing quality reviews of risk processes, including the internal control system.

The management has no indication that, as of 31 December 2024, our risk management system or internal control system is inappropriate or ineffective, and is therefore confident it meets both the challenges of a rapidly changing environment and day-to-day business needs.

B.3.2 Strategy and objectives

The Allianz Group's risk strategy is a core element of our risk management framework. It defines our approach to managing the risks that the Group faces in the pursuit of its broader business strategy. With the risk strategy, Allianz aims to:

- protect the Allianz brand and reputation,
- remain solvent even in the event of worst-case scenarios,
- maintain sufficient liquidity to always meet financial obligations,
- provide sustainable profitability.

Implementation of the risk strategy is facilitated by our risk appetite, which establishes the risk tolerance level of the Group in more concrete terms through the following five core elements:

- setting target ratings for top risks,
- allocating capital and defining minimum and target capital ratios,
- managing liquidity risk,
- defining quantitative financial limits,
- defining policies, standards, and functional rules.

Adherence to the Allianz risk strategy and corresponding risk appetite is achieved by implementing appropriate risk identification, steering, and monitoring processes. The risk strategy also covers business segments of the conglomerate such as property-casualty insurance, life/health insurance and asset management.

B.3.3 Risk governance structure

B.3.3.1 Supervisory Board and Board of Management

Our approach to risk governance permits the integrated management of local and global risks and ensures that our risk profile remains consistent with both our risk strategy and our capacity to bear risks.

Within our risk governance system, the Supervisory Board and the Board of Management of Allianz SE have both Allianz SE and group-wide responsibilities.

The Board of Management formulates business objectives and sets a corresponding business strategy, risk strategy, and investment strategy. It also defines risk limits and allocates risk capital to the business activities within the Allianz Group. The core elements of the risk framework are set out in the Allianz Group Risk Policy and

approved by the Board of Management. The Board of Management reports to the Supervisory Board.

The Supervisory Board advises, challenges, and supervises the Board of Management in the execution of its management activities. The following committees support the Board and the Supervisory Board on risk issues:

Supervisory Board Risk Committee

The Supervisory Board Risk Committee reports to the Supervisory Board, where the information and the findings are discussed with the Board of Management. It monitors the effectiveness of the Allianz risk management framework. Furthermore, it focuses on risk-related developments as well as general risks and specific risk exposures and ensures that the business strategy is aligned with the risk strategy.

Group Finance and Risk Committee

In the context of the Group's Committee Framework, the Group Finance and Risk Committee (GFRC) reports to the Board of Management and provides oversight of the Group's and Allianz SE's risk management framework, acting as a primary early-warning function by monitoring the Allianz Group's and Allianz SE's risk profiles as well as the availability of capital. The GFRC also ensures that an adequate relationship between return and risk is maintained. Additionally, the GFRC defines risk standards, is the limit-setting authority within the framework set by the Board of Management and approves major financing and capital management transactions. Finally, the GFRC supports the Board of Management with recommendations regarding capital structure, capital allocation, liquidity position, and investment strategy, including strategic asset allocation for the different business segments.

B.3.3.2 Overall risk organization and roles in risk management

A comprehensive system of risk governance is achieved via the Policy Framework by setting standards related to organizational structure, risk strategy and appetite, limit systems, documentation, and reporting. These standards ensure the accurate and timely flow of risk-related information (e.g., to the Board of Management via the Management Reporting) and a disciplined approach towards decision-making and execution at both the global level (Board of Management of Allianz SE) and local levels (i.e., the operating and legal entities).

For more details on the Three Lines of Defense Model, please refer to the section "B.4.2 Three Lines of Defense Model".

Risk Management function (Group Risk)

Group Risk is managed by the Group Chief Risk Officer who also serves as the Chief Risk Officer of Allianz SE. Group Risk supports Allianz SE's Board of Management, including its committees, by performing various analyses, communicating information related to risk management, and preparing and implementing committee decisions.

Group Risk also supports the Board of Management in developing the risk management framework – which covers risk governance, risk strategy and appetite – and risk monitoring and reporting. Group Risk's operational responsibility encompasses assessing risks across all risk categories and monitoring limits and accumulations of specific risks across business lines, including natural and human-caused (regulatory terminology: man-made) disasters and exposures to financial markets and counterparties.

Group Risk strengthens and maintains the Group's risk network through regular and close interaction with the management of related undertakings and with other key stakeholders, such as the local finance, risk, actuarial, underwriting, and investment departments. A strong group-wide risk network enables the Allianz Group to influence risk culture across the Group, identify risks at an early stage, and make management aware of these risks.

Some of the key responsibilities of Group Risk are:

- preparing annual risk strategy and risk appetite updates for the Allianz Group,
- regularly reviewing consistency between the Allianz Group's risk and business strategy and, if and as appropriate, proposing changes to the Board of Management,
- proposing standards for the Allianz Group's risk management framework based on consideration of the risk strategy and applicable regulations, and submitting these proposals to the GFRC and Board of Management for approval,
- monitoring related undertakings' adherence to the requirements from the Group's risk management framework and escalating major breaches of framework compliance or exposures outside the risk limits set to the GFRC or Board of Management, and
- supporting the understanding and implementation of Group framework requirements by the risk management functions of the

entities and acting in a consultant role concerning risk management decisions at their level.

Related undertakings

Related undertakings are responsible for their own risk management, including adherence to both external requirements (for example, those imposed by local regulators) and internal standards. Their boards of management are responsible for setting and approving a local risk strategy - supporting the Group's risk strategy - during the annual Strategic and Planning Dialogues with the Group, and for ensuring adherence to their risk strategy.

The insurance and asset management operations of our related undertakings are subject to regular reviews in the context of the group-wide internal risk management and control system. The control measures are accompanied by local Risk Management functions, headed by Chief Risk Officers, who are independent from business line management. The Risk Management functions run risk- monitoring and -controlling processes, locally set up by the respective entities. Furthermore, the local activities are subject to additional reviews by regional entities, or the Allianz Asset Management GmbH for asset management. This ensures the adherence to Group requirements and the related reporting. A local Risk Committee supports both the Board of Management (or an equivalent executive committee) and the Chief Risk Officer by acting as the primary risk monitoring and controlling body.

Consistent implementation of the Group's risk management framework in the related undertakings, including regular dialogue between the Group and the entity, is ensured, for example, through Group Risk representation on local Risk Committees (or equivalent), and through regular assessment of the appropriateness of the local risk management framework and performance of the Chief Risk Officers by Group Risk. Moreover, the Group Chief Risk Officer must be consulted on decisions regarding the staffing, objectives, and performance evaluation of local Chief Risk Officers. To further enhance the regular dialogue at management level focusing on the internal control environment, the Group is implementing the Governance and Controls Dialogue as one key instrument that should further enhance the already existing strong strategic and financial planning procedures known as the Strategic Dialogue and the Planning Dialogue. The Governance and Controls Dialogue is enabled by an integrated Governance and Controls Dashboard, to ensure a holistic overview of the risk landscape as well as external factors that may be potential risk drivers.

Other functions and bodies

In addition to Group Risk and the local Risk Management functions, legal, compliance, and actuarial functions established at both the Group and the entity levels constitute additional components of the Second Line of Defense.

B.3.4 Risk management process

B.3.4.1 Risk-based steering and risk management

We are exposed to a variety of risks, including market, credit, underwriting, business, operational, strategic, liquidity, and reputational risks.

Allianz's Asset Management business segment is primarily exposed to operational risk, reputational risk, and business risk. Market and credit risk are primarily borne by the segment's underlying investors, be they internal or third-party clients.

We consider diversification across different business segments, lines of business and regions to be an important element in managing our risks efficiently, as it limits the economic impact of any single event and contributes to relatively stable results. Our aim is to maintain a balanced risk profile without any disproportionately large risk concentrations and accumulations.

With Solvency II being the regulatory regime relevant for the Group, our risk profile is measured and steered based on our approved Solvency II internal model¹. We have introduced a target solvency ratio range in accordance with Solvency II, based on predefined stress scenarios for both the Group and related undertakings, supplemented by ad-hoc scenarios, historical and reverse stress tests, and sensitivity analyses.

Unlike the insurance business, which is balance-sheet sensitive, our Asset Management business is mainly a cash-flow business. Therefore, the risk of the Asset Management business segment is also analyzed through the impact of predefined material stress scenarios on the operating profit. These are one component in a system of key risk indicators for Asset Management and are regularly monitored. These risk limits are reviewed on a regular basis with First Line of Defense business owners, confirming the pre-assessments derived by

the entity's Risk Management function. These risk limits are presented to the underlying Risk Committee and are ultimately ratified by the Audit Committees and/or Executive Management Boards.

In addition, central elements of Allianz's dividend policy are linked to Solvency II capitalization based on the internal model. This helps us to ensure a consistent view on risk steering and capitalization in line with the Solvency II framework.

Allianz steers its business portfolio with the help of the internal model and supported by sensitivity and scenario analyses. Risks and concentrations are actively restricted by limits based on our internal model.

Allianz applies a comprehensive capital management framework that fully embeds the risk appetite into the capital allocation process. The key performance indicators at the core of the framework are the core return on equity² and the Solvency II operating capital generation³. In addition, considerations on new business, capital intensity, combined ratio, cash remittance and risk sensitivities provide further guidance for the capital allocation and decision-making processes. Our indicators, for example, allow us to identify profitable lines of business and products on a sustainable basis. The framework is a key element that supports management in decisions. Risk considerations, capital needs, as well as an appropriate shareholder remuneration are carefully balanced with the purpose of economic value creation for all stakeholders.

As a consequence, the internal model is fully integrated in the steering of the insurance business, and its application satisfies the so-called "use test" requirement under Solvency II.

B.3.4.2 Coverage of the risk capital calculations

The Allianz Group's internal model to calculate our Solvency Capital Requirement (SCR) covers all major insurance operations⁴. This includes both relevant assets (including fixed income, equities, real estate, and derivatives) and liabilities (including the run-off of all current and planned technical provisions as well as deposits, issued debt, and other liabilities). For with-profit products in the Life/Health business segment, the options and guarantees embedded in insurance contracts – including policyholder behavior – are taken into account.

Smaller related undertakings in the European Economic Area that are not covered by the internal model are reflected with their standard formula results.

At Group level, the contributions of smaller insurance undertakings outside the European Economic Area to the Group Solvency Capital Requirements are derived through experience values from the standard model. This approach has been introduced in the fourth quarter of 2023 in alignment with the Group regulator.

Risk capital related to our European banking operations is calculated based on the approach applied by banks in accordance with the local requirements resulting from the Basel regulation (Basel standards). As the impact on the Group's total Solvency Capital Requirement is minor, risk management for the banking operations is not discussed in greater detail.

For our Asset Management business segment, we assign internal risk capital requirements based on sectoral regulatory capital requirements.

In view of the above, Allianz's risk capital framework covers all material and quantifiable risks. Risks not specifically covered by the internal model include strategic, liquidity, and reputational risks.

Risk exposures

The following sections offer further details on the three broadly defined elements comprising our risk management process, which collectively address all significant risk categories we are exposed to.

1_From a formalistic perspective, the German Federal Financial Supervisory Authority (BaFin) deems our model to be "partial" because not all our entities use the internal model. Some of our smaller insurance entities report under the standard formula and others apply third-country equivalence. For asset management, banking and Institutions for Occupational Retirement Provision (IORP), sectoral requirements are applied. Without loss of generality, we might use the term internal model in the

following chapters, e.g., in case of descriptions also referring to entities that use the internal model, or descriptions focusing on processes with respect to the internal model components.

2_Represents the ratio of shareholders' core net income to the average shareholders' equity at the beginning and at the end of the year. Shareholders' core net income is adjusted for net financial charges related to undated subordinated bonds classified as shareholders' equity. From the average

shareholders' equity, undated subordinated bonds classified as shareholders' equity, unrealized gains and losses from insurance contracts and other unrealized gains and losses are excluded.

3_Solvency II operating capital generation is the percentage point after tax change in the Solvency II capitalization ratio, driven by movements in Solvency II earnings and Solvency II capital requirements resulting from business evolution.

4_Allianz Life Insurance Company of North America is based on third-country equivalence.

Table 15: Key elements of the risk management process and their relation to risk categories Allianz is exposed to

Risk category	Internal model	Top Risk Assessment	Specific risk management process
Market risk	•	•	•
Credit risk	•	•	•
Underwriting risk	•	•	•
Business risk	•	•	•
Operational risk	•	•	•
Reputational risk		•	•
Liquidity risk		•	•
Strategic risk		•	

B.3.4.3 Adequacy of internal model to business profile and model governance

The use of the internal model is subject to approval by the Board of Management of Allianz SE and the respective entities. According to Solvency II requirements, a set of compulsory model governance and control principles (the Allianz Internal Model Governance Framework) apply to the whole lifecycle of the internal model, from its development to its implementation and use. Specifically, key topics covered include model changes, model updates, validation, approval, implementation and operational use, and the monitoring of ongoing appropriateness for use.

In order to ensure that the internal model appropriately reflects the risk profile, all stakeholders are required to submit requests for model changes and/or improvements, which are considered in accordance with established model governance processes. The process for model changes is codified in the Allianz Standard for Model Changes. Major model changes require Allianz SE Board approval based on GFRC recommendation. Minor model changes are approved by the GFRC, and immaterial model changes are within the approval authorities of the company's Chief Risk Officer or Chief Actuary.

The following standards and documents constitute the main model governance building blocks.

Allianz Standard for Model Governance

The Allianz Standard for Model Governance sets the rules and principles for ensuring the appropriateness of the internal model. Key rules and principles are:

- All elements of the internal model must go through a structured validation and approval process before they may be used.
- The validation process takes into account all relevant qualitative and quantitative aspects, and verifies that the internal model is adequate, given the risk profile of the business, and can reliably be used as input for risk decisions.
- There must be controls in place to prevent and detect errors during the operative use of the internal model.
- There must be documentation of all quantitative and qualitative components of the internal model to provide evidence of model appropriateness.

With respect to model validation, the following approach is applied:

- Model owners assess whether the results produced by the model are appropriate and whether the existing documentation is sufficient.
- Independent validation reviews the assessments and considers model-specific validation topics such as coverage, methodology, calibration, data, computational process, results, and documentation, as well as qualitative aspects including model governance, expert judgment, and use test.
- Suitability assessments are performed by the local entities to assess whether model components are appropriate, taking into account local specificities.
- Transversal model validation is undertaken to validate the entire model, taking into consideration the results obtained across all validation areas and the interrelation between them.

Annual validation

An annual validation report is produced to document the results of the regular model validation process and to confirm the ongoing appropriateness of the internal model, as well as its compliance with the Solvency II requirements.

Allianz Standard for Model Change

The Allianz Standard for Model Change sets rules and principles to ensure the appropriateness of internal model changes, including the following:

- The internal model may need to be changed after initial validation and approval in order to ensure it remains appropriate after the occurrence of events such as a material change in the risk profile, business model, or operating environment.
- All model changes must go through a structured model change and approval process before the model change can be implemented.
- The level of the respective model governance (i.e., approval body) depends on the materiality and proportionality of the model change.
- Quantitative impacts of changes are analyzed as an integral part of the model change process.

Changes to Model Governance Framework

In the course of 2024, the following updates were made to the Allianz Internal Model Governance Framework and the internal model:

- We successfully applied for major model changes to our approved internal model. In addition, we implemented several minor/immaterial model changes.
- The model governance remained mostly unchanged but was improved in 2024 by further strengthening the model-specific validation guidelines.

B.3.4.4 Top Risk Assessment

Qualitative assessments as part of the insurance and asset management risk framework include Top Risk Assessments, as well as Group-challenged self-assessments and selected Group reviews of the maturity of the local risk management systems and the adherence to the risk policy framework. Key results of the entities' qualitative risk assessments are reported to the Group on a regular basis.

The Top Risk Assessment (TRA) is Allianz's process for the identification, assessment, mitigation, and monitoring of both quantifiable and non-quantifiable risks, including concentration and emerging risks, which have the potential to significantly threaten the achievement of company objectives. The TRA process incorporates all risks that are either calculated or managed through specific processes (see overview in table 15: "Key elements of the risk management process and their relation to risk categories Allianz is exposed to"), in a holistic risk assessment. The process follows a standardized qualitative assessment methodology: Experts rate risks based on their materiality for the respective Allianz entity, and management implements mitigation plans in the event that an assessed risk exceeds its risk

tolerance level. In addition to the Group TRA, a similar TRA process is carried out at the level of Allianz SE and the other related undertakings.

The TRA process, at both the local and Group level, requires annual scoping to identify risks that may merit inclusion. The Risk Management function initiates and facilitates the TRA process by performing a preliminary analysis of potential top risks, taking into account existing TRA results, results from other risk assessment and management processes, and the input of respective subject matter experts, as well as changes in the internal and external business environment.

Based on this preliminary analysis, the Risk Management function determines the appropriate scope of assessments and arranges workshops with relevant risk experts and/or risk owners throughout the company. These workshops may be conducted on sub-functional, departmental, regional, or any other level deemed appropriate, in order to adequately cover all potential top risks identified in the scoping phase. During the workshops, participants agree on the final definition and scope of top risks, which are then subject to an assessment of actual (residual) risk as well as an assessment of control environment effectiveness. As a last step, a target risk indicating whether the given top risk is currently within the risk appetite is established. Whenever an assessed top risk exceeds its defined level of risk appetite, further mitigating activities must be defined and implemented.

Each top risk is assigned to a risk owner – either a member of the Board of Management or another appropriate senior management individual. The risk owner, typically with the support of a delegated risk expert, is responsible for the final rating of actual and target risk and, where necessary, for action plans to further mitigate the risk. The comprehensive list of top risks in scope and their actual and target risk ratings is ultimately approved by the Board of Management, based upon the recommendation given by the related undertaking's risk committee (the GFRC for the Allianz Group and for Allianz SE), which is additionally responsible for monitoring execution of the action plans.

While the end-to-end TRA process is applied once a year, there are also quarterly monitoring activities, which include the tracking of key risk indicators for top risks above target as well as a quarterly update of the action plan implementation status. In the event that new potential top risks emerge during the year, an extraordinary, out-of-cycle TRA update is performed.

Consolidation of local risk assessments

Each related undertaking is required to perform a full TRA within the first half of each year. Based on a combination of an analysis and benchmarking of related undertaking results (where applicable) and group-level risk assessment workshops, Group top risk candidates are selected, evaluated, and finally reported to and approved by the Allianz SE Board of Management. Approved Group top risks and the implementation of action plans are subsequently monitored by Group Risk and reported to the GFRC as necessary.

Group Top Risk Assessment process

The annual TRA process at Group level takes place during the second half of each year, in order to account for the outcome of the operating entity (OE) TRA process and is coordinated and facilitated by Group Risk.

B.3.4.5 Specific risk management processes

In addition to the TRA, we manage all material risks of any risk category by applying specific risk management processes, as outlined in more detail by further rules comprised in the corporate risk policy framework. Please refer to chapter “C Risk Profile” for more detail.

B.3.5 Own Risk and Solvency Assessment (ORSA)

The ORSA is a comprehensive assessment of all risks inherent in the business to determine whether current and future capital will be sufficient to ensure sustained solvency in the face of these risks. As such, the ORSA goes beyond applying an internal model and/or the standard formula. It considers all risks which have been identified according to the risk management processes outlined in table 15: “Key elements of the risk management process and their relation to risk categories Allianz is exposed to” and includes risks which are very complex to quantify accurately, for example, reputational, liquidity, and strategic risks. In addition, it also considers stress scenarios, and model limitations, and determines how all these risks translate into capital needs over a longer time horizon or how they can otherwise be mitigated. If they translate into capital needs, the ORSA concludes with an assessment as to whether these increased needs can be met with available eligible Own Funds or whether alternative measures are necessary.

B.3.5.1 Review and approval

We perform an ORSA and summarize the results in an ORSA Results Report at least annually based on the reference date 31 December (“regular ORSA”). Ad-hoc ORSA triggers are also defined and regularly monitored to identify events with the potential to significantly impact conclusions from the most recent ORSA. If one or more ad-hoc ORSA triggers are breached, the Chief Risk Officer (CRO) decides if the performance of an ad-hoc ORSA (“non-regular ORSA”) is required.

B.3.5.2 ORSA process

Processes used for the ORSA are also part of our regular, day-to-day management processes. They include regular solvency projection and stress testing, limit monitoring and impact analysis of material business decisions.

These continual processes are formalized and documented annually (and ad-hoc, as necessary) in an ORSA report which contains all the information relevant for the overall ORSA conclusion. The ORSA process – including preparation of the ORSA Results Report – is coordinated by Group Risk, governed by the Allianz Standard for Own Risk and Solvency Assessment (ASORSA), and documented in the ORSA Process Report. The ORSA Process Report describes the overall implementation process, including the relevant stakeholders, and lists the functions, approaches, standards, methods and related documents that serve as inputs for the ORSA. It also provides information on the derivation of the risk assessment results as presented in the ORSA Results Report.

The yearly ORSA process is initiated in the fourth quarter by reviewing the previous ORSA Results Report, taking into account feedback from any reviews of the ORSA Results Report (e.g., by the Audit function), the latest external ORSA requirements, and any other improvement needs identified. The reviewed report is circulated to all topic owners so that they can provide input on their respective subject matter. These key subject matter experts and their contributions include the following:

- Group Risk contributes input on the implications of Risk & Business Strategy over the planning horizon on all risk categories (including financial market, credit, operational, insurance risks and combined stresses, as well as strategic, liquidity, and reputational risks).
- Group Treasury & Corporate Finance provides input on current and potential future material changes to the risk profile that could result from the capital, liquidity, and foreign currency management activities, as well as intra-group transactions.

- Group Accounting & Reporting prepares the assessment of the Own Funds over the business planning period, including the composition of Own Funds across tiers and how this composition may change as a result of redemption, repayment, and maturity dates during this period.
- Group Actuarial provides input on whether Allianz complies with the requirements regarding the calculation of technical provisions, and provides an assessment of potential risks arising from the uncertainties associated with this calculation.
- Group Audit provides an independent assessment of the Internal Control System.

All input received from subject matter experts is compiled and assessed by Group Risk, which then drafts a proposal regarding the overall ORSA conclusion for the CRO to review and approve.

Following the CRO's approval, the ORSA Results Report is vetted by a series of experts and other relevant stakeholders (e.g., business divisions, Accounting and Reporting, Actuarial, Compliance, and Internal Audit functions). This also includes the respective Board offices. Changes to the ORSA Results Report or conclusions based on this vetting stage are considered for incorporation. The revised draft is discussed in the GFRC, which challenges the results where necessary and decides whether further changes should be made before resubmitting to the GFRC or whether to recommend for approval by the entire Board of Management.

The Board of Management is ultimately responsible for reviewing and approving the ORSA Results Report, challenging the

completeness of the assessment and its conclusions, and translating the outcome of the ORSA into specific implications and planned management actions for the business and risk strategy. The ORSA conclusion and corresponding Results Report are shared with the Allianz Supervisory Board, our supervisory body, and key function holders. Resulting management actions and conclusions are communicated to all relevant functions (e.g., business divisions, Accounting and Reporting, Actuarial, Performance Steering, Legal, Compliance, Risk, and Internal Audit functions).

In conjunction with the Strategic and Planning Dialogues, the development of a capital plan that ensures ongoing compliance with the target capital ratios is established in the context of our risk and business strategy. This also considers the projections of regulatory solvency.

All material findings from the ORSA are taken into account in the next planning process. The forward-looking assessment in the ORSA in particular is an essential contribution to business planning. Analyses are performed on whether any aspects identified during the planning exercise could materially change the ORSA conclusions. In case the analyses indicate material changes to recent ORSA results that are not in line with the risk appetite defined, possible measures to address these points will be discussed.

Beyond the ORSA, we also prepare a pre-emptive recovery plan annually, including adverse scenarios, which are far more severe than reasonably expected. The purpose is to analyze whether we would have sufficient options and measures to recover from an extremely

severe and unexpected hypothetical crisis, and which processes are in place to manage such adverse scenarios.

In addition to the regular annual ORSA, ad-hoc ORSAs may be required should the predefined triggering events occur. The ad-hoc ORSA triggers are specified in the table below.

Table 16: Ad-hoc ORSA triggers

Trigger	Description
Solvency-based trigger	Solvency II ratio under the most severe stress case analyzed unexpectedly falls below the action level defined in the risk appetite and has dropped by more than a predefined percentage compared to the previous quarter.
Qualitative triggers	Any merger, acquisition or divestment exceeding a predefined total value of the market value balance sheet (MVBS), as well as any other changes to the organizational structure significantly impacting the business model or business mix. Any changes in regulation or legislation with the potential to significantly affect the risk profile or business model. Any extraordinary change to the risk appetite or reinsurance strategy (i.e., outside the annual risk appetite update).
Liquidity trigger	Allianz SE's indicator "Liquidity Intensity Ratio in the 12 months bucket" rises above a predefined level in the base case with prescribed countermeasures.

B.4 INTERNAL CONTROL SYSTEM

B.4.1 Overview

Based on proportionality and materiality, the Allianz Group's – including Allianz SE's – Internal Control System comprises a series of specific entity level controls (Entity Level Control Assessments – ELCA) and a Non-Financial Risk Management (NFRM)/Integrated Risk and Control System (IRCS) at the process level. The ELCA controls cover all elements of the System of Governance and are therefore an important source of information for the regular review of our System of Governance. The Non-Financial Risk Management (NFRM) framework, which is progressively replacing the Integrated Risk and Control System (IRCS) framework ensures that there are effective controls or other risk mitigation measures for all material operational risks.

Notwithstanding the oversight exercised by the Supervisory Board of Allianz SE, controls carried out within the Allianz Group concern control areas, activities, and reporting, taking into account independence requirements. These controls are embedded in the operational and organizational set-up, exercised throughout the

Group, and subject to constant reviews (e.g., as part of the regular review of our System of Governance).

The following principles may serve as examples:

- Safeguarding and segregation of duties to avoid potential conflicts of interests (e.g., distinguishing the payment and settlement from the booking of trade takings, separation of limit setting from the authorization of transactions, and the exercise of controls from control testing).
- Material decisions are taken by at least two representatives of the Group company in question, even if under local law such company could be represented by one person only (four-eyes principle).
- To facilitate group-wide communication, our company language is English. All significant cross-border communication in writing within the Group is, therefore, in English. Exceptions are possible if deemed appropriate by the parties involved in the respective matter.

- For the financial reporting process, the Allianz Group uses the internationally recognized control framework based on criteria laid down by the Committee of Sponsoring Organizations of the Treadway Commission (COSO), as well as parts of the Control Objectives for Information and related Technology (COBIT) model.
- The so-called Three Lines of Defense Model (see section “B.4.2 Three Lines of Defense Model”).
- Implementation of control activities at company-level (ELCA controls), as well as at process-level, to ensure operational effectiveness.
- Regular update of the pre-emptive recovery plan (§26 (1) VAG) as well as of a contingency plan to deal with any emergency for recovery situations the Group may face.

The following chart illustrates, in a simplified form, our control framework:

Figure 3: Internal control framework

In addition to the general elements that form part of each of the control activities listed above, as well as our risk management system, in the Allianz Group, including Allianz SE, specific controls are utilized, for instance for financial reporting, IT, risk capital calculation, underwriting (including products and distribution), investments, trade compliance according to investment mandates, data privacy, customer protection (including assurance of fiduciary responsibility) and protection/resilience. These are supplemented by management reports.

B.4.2 Three Lines of Defense Model

As a key conceptual element of our internal control framework, the Allianz Group – including Allianz SE – has established a Three Lines of Defense Model, which clearly distinguishes different levels of control with graduated control responsibilities.

The **First Line of Defense** is integrated in day-to-day operating business and consists of management, risk control, and risk management activities. Specifically, these include:

- assessing opportunities and risks at an operational level (this is part of risk assumption, for example when we calculate premiums and assess the risks accepted),
- identifying and implementing methods, models, reporting formats, or other control standards that help optimize the balance of risk and opportunities,
- participating in business decisions, based on the equality principle.

In general, any function not explicitly classified as Second or Third Line is considered part of the First Line of Defense.

The **Second Line of Defense** consists of reviewing and independently monitoring our day-to-day risk assumption and the First Line of Defense's control activities. These tasks are performed by the key functions Risk Management, Actuarial, Legal, and Compliance. Key activities include:

- defining the higher-level control system,
- carrying out controls,
- examining the adequacy and effectiveness of the control framework,
- advising on strategies on how to mitigate risks and execute controls.

To enable the Second Line functions to perform their duties, they are given special rights and privileges – specifically:

- independence from operating entities in terms of reporting lines, definition of tasks and targets, and compensation,
- a direct reporting relationship to the responsible member of the Board of Management, as well as unrestricted access to the entire Board of Management,
- the right to object to business decisions due to severe overarching reasons or concerns,
- the right to escalate decisions to the Board of Management,
- the right to obtain all the information needed for an objective assessment.

At Allianz SE, the following functions belong to the Second Line of Defense:

- Compliance (Group Compliance),
- Legal (Group Legal),
- Risk Management (Group Risk), and
- Actuarial (Group Actuarial).

The **Third Line of Defense** provides independent assurance across the First and Second Lines of Defense. Specifically, its activities include:

- independently assessing the effectiveness and efficiency of the Internal Control System, and
- reporting the results of this assessment to the Board of Management member in charge.

All Third Line of Defense tasks are performed by Internal Audit.

The distinction between the different lines of defense is principle-based and determined by control activities. All functions have independent control responsibilities. The intensity of their controls depends on their role within the Three Lines of Defense Model. While Second and Third Line of Defense functions have explicit competencies to execute their general control and oversight activities, each First Line of Defense function performs general control activities in their areas of responsibility in line with the principles above (see section "B.4.1 Overview"). For instance, the Accounting and Reporting function of Allianz SE is an additional, voluntary key function within the Three Lines of Defense Model, but not a Second Line of Defense function.

B.4.2.1 Relationship between control functions within the Three Lines of Defense Model

To ensure the effectiveness of our Internal Control System, all functions are obliged to cooperate and exchange necessary information and advice. Given that control activities may be exercised by staff in different organizational units, appropriate mechanisms are in place between the control functions to allow fully informed and educated decision-making. For example, the key functions work together in the Group Governance and Control Committee. This body serves the structured exchange of governance and control issues. It consists of the heads of the key functions and other functions with participation of members of the Allianz SE Board of Management.

B.4.2.2 Authorities of the control functions

Within the Allianz System of Governance, the Second and Third Line of Defense control functions are independent of the First Line of Defense in their daily operations. They can also object to decisions made by First Line of Defense functions, if they have severe overarching reasons or concern. Respective escalations may be directed to a related committee, a member of the Board of Management, or the entire Board of Management. Second and Third Line of Defense functions directly report to a member of the Board of Management and have unrestricted access to the entire Board of Management. In addition, they may report specific issues on their own initiative to either a committee or the entire Board of Management (e.g., annual or ad-hoc functional reports from the Internal Audit, Risk Management, Compliance, Actuarial functions). The heads of these Second and Third Line of Defense functions, as well as the head of Accounting and

Reporting (so-called key function holders), are subject to instructions from the Board of Management only.

The Second Line of Defense functions are routinely involved in the decision-making process regarding material decisions, in that they provide advice to the Board of Management. For Allianz SE, the head of the Group level Risk function is a standing guest of the Group Finance and Risk Committee. As such, the head of Group Risk advises the Board of Management on questions such as capital and liquidity management, risk appetite, and risk limits. The head of Group Risk and the head of Group Actuarial are standing guests of the Group Underwriting Committee and provide their expert opinion on whether the underwriting policy is in line with the company's risk appetite. Likewise, the head of Group Risk is also a standing guest in the Group Investment Committee, providing advice on whether the intended strategic asset allocation and/or individual investments are in line with the risk appetite. Finally, the head of Group Legal is also a member of the Group Compensation Committee, ensuring that remuneration policies and practices are in line with legal requirements. All key function holders are members of the Group Governance and Control Committee, where they consult – also for Allianz SE – on and coordinate governance and control-related topics in a structured approach together with other members of the committee.

In addition to this committee work and in line with the business judgment rule, material decisions by the Board of Management or one of its committees are prepared by collecting opinions from the various stakeholders and experts, including the Second Line of Defense functions. In this process, the latter express their opinion and, if this is not heard, escalate the issue to a member of or the entire Board of Management.

Material issues are thus reported by the key function holders to a member of or the entire Board of Management, or to the respective Group level function, or to the Chairperson of the Supervisory Board, as the case may be, particularly for Internal Audit as a Third Line of Defense function.

The Allianz Group key function holders consider the allocation of resources of Allianz SE for Group tasks to be adequate for the control functions. The corresponding number of employees (full-time equivalents, FTEs) allocated to the Allianz Group tasks as of 31 December 2024 is listed below.

Table 17: Number of FTEs allocated to group-related key function tasks

Key function	FTEs
Internal Audit ¹	29.9
Compliance	43.0
Legal	24.9
Accounting and Reporting	82.2
Risk Management	112.2
Actuarial ²	25.5
Total	317.7

1_ The calculation is based on planned audits that (also) cover Group processes. If audits also cover Solo processes, they have been considered with 50 % of total capacity.

2_ For Actuarial, due to organizational and structural changes within Allianz SE, there has been a realignment of resources across various departments which limits the comparability with previous years.

In addition, the group-level control functions are in regular exchange with the local functions, and also regularly address the question of their resources.

To further ensure the operational independence of the Second and Third Line of Defense functions, there are additional functional reporting lines in which the respective functions at the related undertakings report directly to the corresponding functions at Group level. Local control functions may escalate an issue to the Group's respective control function, which, in turn, may escalate it to Allianz SE's Board of Management. The head of the respective group-level function has to be included with regard to the allocation of resources of the local control function. In particular, the replacement of local heads of a key function requires the approval of the head of the respective group-level function.

B.4.2.3 Relationship between second-line functions and Internal Audit function

The Actuarial, Legal, Compliance, and Risk Management functions are separated from the Internal Audit function. There are no instruction rights or reporting obligations between any of these functions. The Actuarial, Legal, Compliance, and Risk Management functions are

included in the audit program and methodology applied by the Internal Audit function, in that it performs a periodic assessment of the adequacy and effectiveness of these functions.

The head of Internal Audit keeps the heads of the key functions – Actuarial, Legal, Compliance, and Risk Management – informed of any audit findings in their respective areas of responsibility. For further information on the Internal Audit function, please refer to “B.5 Internal Audit Function”.

B.4.2.4 Joint responsibilities of key functions

The Risk Management, Actuarial, Legal, Compliance, Accounting and Reporting, and Internal Audit functions jointly verify at least once per year that clear and consistent responsibilities and processes regarding the applicable control framework are in place and duly observed. These functions cooperate closely, monitor one another, and are familiar with the specific tasks and competencies of each sister function. The Internal Audit function's responsibility to independently assess the effectiveness and efficiency of the group-wide internal control system remains unaffected by this.

B.4.3 Compliance function

The Compliance function is a core component of the Allianz Group's Internal Control System.

Fulfillment of the Compliance function's duties is ensured by the compliance department of Allianz SE (Group Compliance). Group Compliance is an independent department headed by the Group Chief Compliance Officer (GCCO). This person is the key function holder with regard to Allianz SE's Compliance function and reports directly to the responsible member of Allianz SE's Board of Management. The GCCO has extensive experience in control functions in the financial services sector, as well as extensive senior leadership experience in business functions.

The Compliance function and the Legal function cooperate in the interpretation of and adherence to the relevant Solvency II regulations, as well as in the respective reporting to the Board of Management.

In the Allianz Group, Group Compliance manages compliance activities using group-wide compliance policies, monitoring their local implementation and adherence through a quality assurance program. For that purpose, the Compliance function uses a compliance organization that reflects the Allianz Group's organizational structure, which in terms includes local, regional, and divisional Compliance functions.

In order to be able to perform its duties, the Compliance function has full access rights to all information, documents, and data relating to the company. It maintains a compliance management system in accordance with the risk exposure and the principle of proportionality. In addition to the key tasks listed in the section “B.1.2.1 Compliance function (Group Compliance)”, the compliance management system comprises the following elements: compliance culture and integrity, compliance training and communication, compliance principles and processes, investigations and the speak-up facility, and regular reporting to the Allianz SE Board of Management as well as to other corporate bodies, if applicable.

To assess how changes in the legal environment can impact the Allianz Group's operations, Group Compliance has established a process in which experts identify relevant changes and assess potential impacts on the Allianz Group. To support this process, Allianz Group companies report to Group Compliance on any group-relevant changes in their legal environment.

In order to identify and assess the risk associated with possible legal violations, Group Compliance evaluates the compliance-specific risks as part of the company-wide risk assessment, which is steered annually by the Allianz Group's risk management function (Group Risk), with the involvement of relevant business functions. Based on this assessment, risk-mitigation measures are planned, implemented and documented.

In addition to the above, Group Compliance and the compliance organization regularly advise and train the management and employees of Allianz Group companies on compliance risk areas.

Last but not least, Group Compliance has set up a speak-up facility allowing employees and third parties to report anonymously in case they observe any potentially unlawful or noncompliant behavior.

B.5 INTERNAL AUDIT FUNCTION

B.5.1 Implementation of the Internal Audit function

In terms of organizational structure, Group Audit is the Internal Audit function for Allianz SE and also coordinates and steers all Internal Audit units within the Allianz Group.

In our Three Lines of Defense Model, the Internal Audit function acts as a Third and Last Line of Defense.

The implementation of the Internal Audit function within the Allianz Group is defined in the Allianz Group Audit Policy as well as in the Allianz Standard Audit Manual, which set out core principles, tasks, methods as well as processes and procedures. Amongst others, this includes the definition of the audit universe, i.e., the areas and topics which need to be audited to ensure adequate coverage of all relevant activities. The frequency of the audits over the course of a five-year audit cycle is then determined using a risk-based approach, by assigning risk ratings to all areas and topics in the audit universe. The resulting annual audit plan is approved by the Chairperson of the Board of Management, and/or the Audit Committee. If needed, ad-hoc audits may be executed. The results of an audit are documented in an audit report, which is shared with the auditees, the Chairperson of the Board of Management and the responsible member of the Board of Management. Subsequently, the Internal Audit function monitors the implementation of the auditees' plans to remediate the identified deficiencies.

The coordination and steering activities of Group Audit with regard to the Internal Audit units within the Allianz Group include the following:

- setting standards,
- exercising quality control, and
- designing audit strategies and related audit programs.

Quality control includes a quality assurance and improvement program that comprises both internal and external assessments. The local Chief Audit Executive is required to present the results of the assessments to the Chairperson of the Board of Management and to the Audit Committee (where existing) of the relevant entity.

Local Chief Audit Executives are obliged to immediately inform Group Audit of any significant risk or finding related to governance, internal control system or risk management in their area of responsibility.

Local Internal Audit units report to Group Audit on audit findings, results of audits, compliance with the Group Audit Policy, the fulfillment of the approved local audit plan, significant changes of the approved audit plans and the implementation of recommendations.

These processes drive the consistency and quality of Internal Audit throughout the Group.

B.5.2 Independence and objectivity

The Internal Audit function of the Allianz Group possesses organizational independence, which corresponds to its role as Last Line of Defense. The Internal Audit function must have a standing strong enough to ensure its necessary independence. "Necessary independence" means that no undue influence can be exercised over the function, for instance in terms of reporting, setting of objectives, targets or compensation. Members of the Internal Audit function must avoid conflicts of interest in fact or appearance.

Compliance with these principles is ensured through adequate reporting lines and comprehensive information rights. Each Chief Audit Executive reports directly to the Chairperson of the Board of Management and, where permissible, to the respective Audit Committee. The Chief Audit Executive is in regular direct contact with the Chairperson of the entity's Board of Management as well as with the Chairperson of the local Audit Committee (where existing). There

is also an ultimate functional reporting line between the local Internal Audit units and Group Audit.

The Internal Audit function, to the extent permitted by law, has the right to directly communicate with any employee and obtain access to any information, records, or data it requires to fulfill its responsibilities. Furthermore, it has both the responsibility and the right to audit activities, procedures, and processes in all areas.

Internal auditors perform their duties in an unbiased manner; audit findings are based upon facts and supported by sufficient documented evidence.

Internal auditors and the Internal Audit function are authorized to make assessments and recommendations. However, they cannot give instructions (except in cases of suspicion of illegal activities/fraud) and they do not implement operational processes. To ensure independence of the Internal Audit function and objectivity in the execution of audits and activities, the Allianz Group Audit Policy sets out rules regarding the assignment of internal auditors. Amongst others, these rules include the requirement for internal auditors to not audit business areas they have worked in during the past 12 months.

Finally, each local Chief Audit Executive, must confirm – at least annually – the independence of the local internal audit function to the Chairperson of the local Board of Management (and/or Audit Committee, where existing).

B.6 ACTUARIAL FUNCTION

The Actuarial function and its setup are governed by the Allianz Group Actuarial Policy. This corporate rule sets the framework for actuarial work at the Allianz Group in general and facilitates the implementation of regulatory requirements with respect to the Actuarial function. As such, it incorporates best-practice actuarial standards across the Group and establishes core principles regarding key responsibilities, the organizational framework, and the reporting and monitoring duties of the regulatory Actuarial function within the context of Solvency II.

The Group Actuarial function has a direct reporting line to the Board of Management and provides an Actuarial function report on an annual basis, which comprises statements on a proper governance framework as well as on the essence and results of its key tasks. This includes coordinating and validating the calculation of technical provisions for the Solvency II market value balance sheet and the IFRS balance sheet, to provide an opinion on the reinsurance strategy and underwriting including sustainability risks, and to contribute to the risk management.

The Actuarial function's opinion and the results of its work are considered in strategic decisions, taking into account the level of the company's risk appetite. This way, the actuarial work contributes to the organization's forward-looking steering mechanism.

The results of actuarial work are communicated to all relevant stakeholders including the Board of Management, and embedded in day-to-day decision-making processes. A respective annual report is also provided to the Audit Committee of the Supervisory Board of Allianz SE.

Actuarial work is governed by a robust control framework, which detects and prevents material errors of judgment and calculations, and ensures that potential conflicts of interest are identified and avoided. In addition, the Group Actuarial function oversees the appropriateness and consistency of models, methodologies, assumptions, change policies, and validations used in the calculation of technical provisions. Furthermore, the Group Actuarial function contributes to the effective implementation of the risk management system.

The local Actuarial functions are regularly assessed by the Group Actuarial function and results are communicated to the Board of Management, as well as to the respective local equivalent. This way, ongoing monitoring is ensured regarding the duties of the Actuarial function within the Allianz Group (including the preparation of its annual report), thus supporting the continuous advancement of the Actuarial function and the strengthening of its sustainable contribution to business decisions.

B.7 OUTSOURCING

B.7.1 Overview

The outsourcing of functions or services essential to the operation of an Allianz entity directly affects our customers' interests. In order to appropriately safeguard these interests at the Group level, certain principles and processes have to be observed in order to adequately assess, mitigate, and control the risks associated with outsourcing and to ensure business continuity in the case of adverse events or termination. To establish these principles and processes, and thus to set a sound Group standard for outsourcing and to ensure compliance with Solvency II requirements, the Allianz Group has established a Group Outsourcing Policy, complemented by local outsourcing policies and implementation guidances.

B.7.2 Group Outsourcing Policy

The Group Outsourcing Policy (GOP) governs the outsourcing of functions or services to internal as well as external providers. Its main purpose is to determine the relevant processes and strategies for outsourcing at the Group level and to ensure compliance with regulatory requirements, while providing the necessary space for adjustments for local legal requirements. In particular, this includes key criteria for defining critical and important functions and services (CIFS) to be outsourced, for selecting, hiring, and monitoring providers, and for determining clear roles and responsibilities, control rights, and rules for the termination of outsourcing agreements.

The GOP is principally mandatory across the entire Allianz Group. Entities which are subject to banking and asset management regulations are obliged to adopt their own outsourcing policy to reflect the specific requirements of their supervisory regime.

Insurance or reinsurance undertakings within the European Economic Area (EEA) are required to adopt their own local outsourcing policy, which must comply with the GOP and must be approved by their respective Board of Management.

B.7.3 Scope of transactions and participating companies (legal entities) included in this report

The scope of this report includes the internal and external outsourcing of key functions (i.e., Risk Management, Internal Audit, Compliance, Actuarial, Legal, and Accounting and Reporting), as well as of CIFS or services by EEA-based (re)insurance undertakings belonging to the Allianz Group (i.e., consolidated in the Allianz Group financial statements).¹

In addition, for the entities mentioned above, the report also covers the intra-group outsourcing of volumes equal to or above € 10,000 thou in the 2024 calendar year. This materiality threshold at the Group level has been set in consideration of the financial and capital strength of the Allianz Group, as well as the robust System of Governance at the related undertaking and the Group level, reducing the likelihood of unexpected failure of internal outsourcing due to existing controls and effective business continuity management.

All other outsourcing agreements are out of scope of this report.

B.7.4 Outsourcing agreements

Responsibility for the classifying and reporting of relevant outsourcing agreements lies with the undertaking that is outsourcing. Within the scope described above, the Allianz Group is reporting the following number of outsourcing agreements for the period from 1 January 2024 to 31 December 2024:

- a) 812 for CIFS – critical and important functions and services (excluding key functions),
- b) 66 for key functions as defined above (primarily intra-group transactions),
- c) 11 additional material intra-group outsourcing agreements (not covered in a) or b)).

About one-sixth of these outsourcing agreements were concluded by the global line Allianz Partners; the rest by various other related undertakings.

The largest share of the outsourcing contracts concerned services regarding claims-handling, assistance, policy management and underwriting, followed by IT and investment management activities.

The majority of these outsourcing agreements were concluded with providers located in Europe, with Germany, France, Romania, and Italy being the main countries. A majority of the outsourcing agreements concluded with providers in Germany are related to the outsourcing activities of Allianz Germany entities, Allianz Partners, and Allianz Direct in the areas of central functions, claims-handling, investment management, and IT. For all countries with the respective numbers of outsourcing agreements per category (as listed above), please refer to table "Provider countries" below.

The table contains our operating entities, each of which may have several primary insurance and reinsurance entities associated with them, and lists the outsourcing agreements reported by their relevant entities in the respective provider countries, clustered by outsourcing classification. For a few agreements, the provider may deliver the services out of several countries. In these cases, all countries are listed and the relevant agreements are marked (*); however, in summing up, each agreement is counted as one.

¹As in the previous year's report, only those legal entities of the related undertakings that are regulated under Solvency II are considered.

B.8 ANY OTHER INFORMATION

B.8.1 Information on ORSA

Currently, Allianz has opted not to have a single ORSA Results document for the Group and its subsidiaries. Instead, the related undertakings perform their own ORSA activities, if required by local regulators.

B.8.2 Other material information

All material information regarding the System of Governance has been addressed in the previous sections.

RISK PROFILE

We measure and steer risk based on an approved internal model and the Solvency II standard formula, which quantify the potential adverse developments of Own Funds. The results provide an overview of how our risk profile is distributed over different risk categories and determine the regulatory capital requirements in accordance with Solvency II.

Solvency Capital Requirement per risk category

This section provides an overview of the overall risk profile, followed by more detailed descriptions of each corresponding risk category in the different subsections. Due to materiality considerations, our presentation approach in the sections on risk categories follows the internal model methodology. Nevertheless, statements regarding the

characteristics of our business underlying the risk profile are also valid for standard formula components. Section “E.4 Differences between the Standard Formula and any Internal Model Used” addresses the differences between the internal model and the standard formula for each risk category.

The following table provides an overview of the different risk categories contributing to the overall diversified risk (Solvency Capital Requirement – SCR).

Table 19: Solvency II Capital Requirement

€ thou

Component - specific information		
Risk type	2024	2023 ²
Total diversification	(19,781,061)	(18,450,280)

Total Group solvency capital requirement	44,703,373	43,484,650
¹ Undertakings for collective investments in transferable securities. ² To allow for comparability, 2023 figures were restated to reflect the changes in several definitions due to EIOPA's publication of clarifications in 2024.		

Our overall risk profile shows a concentration of financial risks (market and credit risks). This is predominantly due to our investment of the premiums received from policyholders to back the claims from our insurance contracts. For further information on market and credit risks, as well as concentrations within these risk categories and respective sub-risk types, please see sections “C.2 Market Risk” and “C.3 Credit Risk”.

As of 31 December 2024, the Group's diversified risk capital increased by € 1,218,724 thou to € 44,703,373 thou (2023: € 43,484,650 thou). The increase in the Solvency II Capital Requirement was driven by several factors. These include a rise in Non-Life underwriting risk, primarily due to higher reserve volumes. Another driver was the appreciation of the U.S. dollar against the euro, which

led to an increase in capital requirements of Allianz's U.S. subsidiaries in euro terms.

These impacts were partially compensated by a lower market risk. For market risk, higher capital requirements from market developments were more than compensated by model changes to better reflect the actual risk profile.

The Minimum consolidated Group Solvency Capital Requirement (MCR) of the Allianz Group decreased by € 591,561 thou over the same period.

The Group's risk profile has not changed significantly compared to the previous year.

Insurance companies for which the total capital requirement and capital requirements at the level of risk components are modeled

based on the Solvency II Standard Formula contributed € 7,882,379 thou to the Group's diversified risk capital for December 31, 2024. Minor insurance companies outside the European Economic Area (EEA), which are modeled based on experience values from the standard formula, contributed an additional € 3,523,026 thou to this figure¹.

The following table shows the SCR figures per risk module for the insurance companies for which capital requirements at the level of risk components are modeled based on the Solvency II Standard Formula, as well as SCR figures per risk category reflecting insurance companies modeled based on the internal model.

Table 20: Solvency II Capital Requirements at the level of risk components for standard formula and internal model insurance entities

€ thou

Type of the underlying model applied	Component description	2024	2023
Risks from entities using the standard formula	Market risk	5,630,685	5,545,463
	Counterparty default risk	1,391,640	1,209,652
	Life underwriting risk	3,518,526	3,271,450
	Health underwriting risk	2,158,837	1,850,566
	Non-Life underwriting risk	4,359,082	4,040,507
	Intangible asset risk	-	-
	Operational risk	1,277,808	1,206,256
	Loss-absorbing capacity of technical provisions	(1,144,933)	(1,127,214)
	Loss-absorbing capacity of deferred taxes	(1,584,453)	(1,525,817)
Risks from entities using the internal model (IM)	IM – Market risk	19,394,583	21,136,642
	IM – Underwriting risk	11,460,037	10,968,451
	IM – Business risk	3,607,680	3,513,144
	IM – Credit risk	3,586,665	3,487,207
	IM – Operational risk	3,161,328	3,045,381
	IM – Loss-absorbing capacity of deferred taxes	(4,550,533)	(4,439,027)
	IM – Capital buffer	3,236,182	2,684,186

Off-balance sheet positions are covered in the internal credit risk model.

Allianz is well-positioned to deal with potentially adverse future events, due to our strong internal limit framework, stress testing, internal model, and risk management practices. Finally, the Group has the additional advantage of being well-diversified, both geographically and across a broad range of businesses and products.

Based on the information available to us at the time of the report finalization, we expect the Group to continue to be sufficiently capitalized and compliant with both the regulatory Solvency Capital Requirement and Minimum consolidated Group Solvency Capital Requirement.

In recent weeks, equity and bond markets saw a strong increase in volatility, as global economic growth and inflation prospects are impacted by uncertainty related to augmented geopolitical dynamics, particularly by an increase in trade conflicts. The geopolitical environment has already been affected by several existing major uncertainties, including the development of the war in Ukraine and the security situation of E.U. member states.

In addition to the economic and geopolitical risks, there are several other factors that may lead to a financial market volatility. Lasting momentum for populist and radical parties around the globe could make international cooperation and coordination more challenging and complex, leading to a lower chance of impactful

political action on geopolitical and regional crises due to conflicting objectives. The risk factors also include challenges from future European defense spending and funding, as well as disruptions in global supply chains, which weigh on global trade, with the potential to prompt long-term structural shifts in these chains. Lasting risk factors include climate change, as well as the challenges of implementing long-term structural reforms in key eurozone countries.

The increasing reliance on digital technologies, combined with the rising use of artificial intelligence, increases the risk of technology obsolescence, cyberattacks, data breaches, system failures, negative impacts from the use of deepfake tools on political and business

¹In the table "Solvency II capital requirement", minor non-EEA insurers are reflected via the two categories "Capital requirements for non-controlled participations" and "Capital requirements for residual

undertakings". The first of the two categories also includes several entities within the EEA which are not modeled based on this approach.

processes, as well as the risk of non-compliance with increasing regulation covering IT-related business processes.

Liquidity risk is not shown in the table above, as it is assessed outside of the internal model and we do not hold any dedicated risk capital for it. Please refer to the section "C.4 Liquidity Risk" for details.

We apply an extensive stress-testing framework to manage our risk profile. Amongst other things, it comprises the following:

- **Parametric stresses:** These are standardized shocks on single or multiple risk factors and categories. The parametric shocks impact both our Own Funds and our risk capital. Examples of sensitivities are:
 - **Equity sensitivities:** These stress tests measure the sensitivity of Allianz's exposures with respect to shocks on the respective market indices. The price of all equities (traded as well as non-traded indices) – without considering real estate indexes – changes by +30% or -30%.
 - **Interest rate sensitivities:** These stress tests measure the impact on Allianz's positions when interest rates shift up or down by a parallel basis points shock. Shock sizes considered are "IR +/- 100 basis points" and "IR +/- 50 basis points". The interest rate shocks described in this section also consider the effect of anchoring to certain ultimate forward rates.
 - **Combined sensitivities:** These sensitivities combine the impact of applying shocks on multiple market factors, such as a combined shock on interest rates, equity market factors and credit spreads where interest rates are shocked by -50 basis points, equities by -30%, and credit spreads by +50 basis points.
- **Historic stresses:** Market movements observed during certain periods of stress (for example, the 2008 financial crisis) are simulated, along with their respective impacts on our capitalization.
- **Reverse stress tests:** This approach is used to identify the level of severity of a particular kind of stress that is needed to meet a certain capitalization ratio.
- **Ad-hoc scenarios or event-driven scenarios:** We use these scenarios to assess the impact of current developments and potential upcoming events.

The presented sensitivity analyses are based on defined variations of specific parameters and describe the resulting development of our capitalization under such an idealized scenario (e.g., decrease in interest rate by 50 basis points). The observed developments will, however, typically materialize in a more complex way (e.g., interest rates don't typically decrease in a parallel shift manner along the term structure) and not in isolation (e.g., interest rates move together with other market parameters, such as equities, credit spreads, etc.). As such, sensitivities should be interpreted in a way that they provide valuable information in areas to which our capitalization is particularly sensitive, together with an indication of the estimated magnitude. The actual observed developments in the capitalization can, however, be more or less pronounced depending on the specific realized circumstances. Our comprehensive stress testing framework is regularly analyzed in order to identify potential enhancements to support the explanatory power of stress tests conducted in light of our risk profile.

We also perform regular stress tests making use of the internal model. The impacts of these sensitivity analyses are described in the respective sections.

Entities of the Allianz Group have to properly manage their risks according to the limit framework. These risks are accumulated at the Group level and are subject to diversification effects. Only aggregate risks exceeding the Group's level of risk appetite are mitigated externally.

Finally, the avoidance of concentration risk in the asset portfolio is a key principle of the prudent person principle, which is explained in more detail below.

Prudent person principle

The Allianz Group invests in accordance with the prudent person principle (Article 132 of the Directive 2009/138/EC together with the amendment by Article 275a of the Commission Delegated Regulation (EU) 2015/35). The implementation of the prudent person principle at the Allianz Group comprises two dimensions:

- All assets are invested to ensure the quality, security, liquidity, profitability, and availability of the investment portfolio as a whole. This also includes the requirement to structure the investment portfolio in a way appropriate to the nature and duration of insurance liabilities covered with these assets.

- The Allianz Group only invests in assets if it can adequately identify, measure, monitor, manage, control, report, and integrate the related risks, including sustainability risks, in its solvency assessment. Before investing, Allianz also reviews the investment's consistency with beneficiaries' and policyholders' interests and its impact on the quality, security, liquidity, profitability, and availability of the whole portfolio.

Moreover, the Allianz Group takes into account the potential long-term impact of its investment strategy and investment decisions on sustainability factors and ensures, where relevant, that the investment strategy and investment decisions reflect the sustainability preferences of its customers.

Diversification and correlation assumptions

As Allianz is an integrated financial services provider offering a variety of products across different business segments and geographic regions, diversification is key to our business model.

Diversification typically occurs when looking at combined risks that are not, or only partly, interdependent. Important diversification factors include regions (for example, windstorm in Australia vs. windstorm in Germany), risk categories (for example, market risk vs. underwriting risk), and subcategories within the same risk category (for example, commercial vs. personal lines of property and casualty risk). Ultimately, diversification is driven by the specific features of the investment or (re)insurance products in question and their respective risk exposures. For example, an operational risk event in Australia can be considered to be highly independent of a change in credit spreads for a French government bond held as investment.

The internal model considers concentration, accumulation, and correlation effects when aggregating results at the Group level, Allianz SE level, or at the level of other Group companies. The resulting diversification reflects the fact that all potential worst-case losses are not likely to materialize at the same time.

Where possible, we derive correlation parameters for each pair of market risks through statistical analysis of historical data, considering observations over more than a decade. In cases where historical data or other portfolio-specific observations are insufficient or unavailable, correlations are set by the Correlation Settings Committee, which combines the expertise of risk and business experts in a well-defined

and controlled process. In general, when using expert judgment, we set the correlation parameters to represent the joint movement of risks under adverse conditions. Based on these correlations, we use an industry-standard approach, the Gaussian copula, to determine the dependency structure of quantifiable sources of risk within the applied Monte Carlo simulation.

The Group's total diversification (as shown in table 19 above), which captures the diversification between the risk components from the internal model and the standard formula, amounted to € (19,781,061) thou (2023: € (18,450,280) thou).

Model changes in 2024

In 2024, our internal model was further enhanced based on regulatory developments, model validation results, and the feedback received in the course of our consultations with regulators. To support transparency, model changes and the resulting impact on our risk profile are shown in this section. The reference date is 31 December 2023.

The net impact of regulatory and model changes on the Solvency II risk capital of the Group in 2024 was € (1,069,419) thou. This decrease in SCR was mainly driven by changes in the modeling of interest rate risk and private equity investments, as well as by modeling changes introduced at the level of operating entities to better reflect local specifics.

C.1 UNDERWRITING RISK

C.1.1 Property-Casualty

The Property-Casualty primary and reinsurance business of the Allianz Group is exposed to premium-risk-related adverse developments in the current year's new and renewed business, as well as to reserve risks related to the business in force.

On behalf of the Allianz Group, Allianz SE has set up a natural catastrophe bond with the involvement of a special purpose vehicle located in Europe. Furthermore, and as of 2025, Allianz SE and Allianz Re of America will cede part of their Third Party Assumed Business book with the involvement of a special purpose vehicle located in Bermuda. Apart from these, there is no material underwriting risk transferred to special purpose vehicles.

C.1.1.1 Premium risk

As part of our Property-Casualty business operations, we receive premiums from our customers and provide insurance protection in return. Premium risk is the risk that actual claims for the business in the current year develop adversely relative to expected claims ratios. Premium risk can be mitigated by reinsurance as well as by technical excellence in underwriting. Assessing risks as part of the underwriting process is therefore a key element of our risk management framework. There are clear underwriting limits and restrictions which are defined centrally and applied across the Group.

Premium risk is subdivided into three categories: natural catastrophe risk, terror risk, and non-catastrophe risk including man-made catastrophes.

Risk measurement

Premium risk is estimated based on actuarial models that are used to derive loss distributions. Non-catastrophe risks are modeled using frequency and severity models for large losses and aggregate loss distribution models for attritional losses. Natural disasters such as earthquakes, storms, and floods represent a significant challenge for risk management due to their high accumulation potential for higher return periods. For natural catastrophe risks, we use special modeling techniques which combine portfolio data (geographic location, characteristics of insured objects, and their values) with simulated natural disaster scenarios to estimate the magnitude and frequency of

potential losses. Where such stochastic models do not exist, we use deterministic, scenario-based approaches to estimate potential losses. Similar approaches are used to evaluate risk concentrations for terror events and man-made catastrophes, including losses from cyber incidents and industrial concentrations.

These loss distributions are then used within the internal model to calculate potential losses with a predefined confidence level of 99.5%.

Concentration of risks

Our aim is to maintain a balanced risk profile, avoiding any disproportionately large risk concentrations or accumulations. Concentrations of non-market risks are monitored on a stand-alone basis (i.e., excluding diversification effects with other risk categories) using a global limit framework to avoid substantial losses from single events, such as man-made catastrophes, natural catastrophes, or terror events. Allianz SE and the other entities of the Allianz Group have to properly manage their risks according to the central limit frameworks. Apart from the centrally defined limits, Allianz SE and other operating entities have local limits in place that take into account their individual business environments, thus limiting risk accumulation. In addition, assessing risks as part of the underwriting process is a key element of our management framework. There are clear underwriting limits and restrictions which are defined centrally and are in place across the Group.

Risks are accumulated at Group level and evaluated on a diversified basis. Only aggregate risks exceeding the Group's risk appetite are mitigated externally, for example using reinsurance.

The top five perils contributing to the natural catastrophe risk as of 31 December 2024 were: windstorms in Europe, tropical cyclones in the United States, earthquakes in the United States, floods in Germany, and hail in Germany.

There were no significant concentrations of premium underwriting risk in our Property-Casualty business segment.

Mitigation of risks

Excessive risks are mitigated by underwriting guidelines, exposure controls, and reinsurance agreements. These measures contribute to a limitation on risk accumulation and are actively managed by the Allianz Group, Allianz SE, and our other operating entities.

Reinsurance-mitigation techniques are a standard element of our risk management framework and are reflected in risk capital modeling. Regular monitoring of selected accumulations, including the mitigation effect of reinsurance contracts, is part of the risk limit system.

Natural catastrophe risk is evolving, both in frequency and magnitude, due to climate change effects. Constant attention is given, and changes to the Property-Casualty underwriting framework are made, in order to adapt to this changing and emerging risk.

Risk sensitivity

In order to manage our risk exposure adequately, we perform selected stress tests for premium and reserve risk. A one-in-ten-year non-catastrophe event, for example, would decrease our Solvency II capitalization ratio by 5 percentage points.

C.1.1.2 Reserve risk

Reserve risk represents the risk of adverse developments in best-estimate reserves over a one-year time horizon, resulting from fluctuations in the timing and/or amount of claims settlement. We estimate and hold reserves for claims resulting from past events that have not yet been settled. In case of unexpected developments, we would experience a gain or loss dependent on the assumptions applied for the estimate. In addition, the risk of inflation volatility deviating from historical observations and of changes in yield curves is covered in the specific market risk modules.

Risk measurement

Similar to premium risk, reserve risk is calculated based on actuarial models. The reserve distributions derived are then used within the internal model to calculate potential losses based on a predefined confidence level of 99.5%.

Concentration of risks

There is no accumulation of reserve deviations (adverse reserve developments) comparable to premium risk from natural or man-made catastrophes. The accumulation of adverse reserve developments across our lines of business is included in our internal model.

There were no significant concentrations of reserve underwriting risk in our Property-Casualty business segment.

Mitigation of risks

In order to reduce the risk of unexpected reserve volatility, Allianz SE and the other related undertakings of the Allianz Group constantly monitor the development of reserves for insurance claims on a line-of-business level. In addition, related undertakings generally conduct annual reserve uncertainty analyses based on similar methods used for reserve risk calculations. The Allianz Group performs regular independent reviews of these analyses and Group representatives participate in the local reserve committee meetings.

Retrocession is another important instrument used to mitigate reserve risk.

Risk sensitivity

In order to adequately manage our risk exposures, we perform stress tests for reserve risk. A one-in-ten-year event, for example, would decrease our Solvency II capitalization ratio by 6 percentage points.

C.1.2 Life/Health

Underwriting risks in our Life/Health operations (biometric risks) include mortality, disability, morbidity, and longevity risks. Mortality, disability, and morbidity risks are associated with an unexpected increase in the occurrence of death, disability, or medical claims. Longevity risk is the risk that the reserves covering life annuities and pension products might not be sufficient due to longer life expectancies of the insured.

Life/Health underwriting risk arises from profitability being lower than expected. As profitability calculations are based on several parameters – such as assumptions on future mortality rates, or morbidity claims – the actual development may differ from the expected one. For example, lower-than-expected mortality rates would lead to additional annuity payments in the future. However, beneficial deviations are also possible; for example, a trend towards healthier lifestyles will most likely result in lower overall health insurance claims.

C.1.2.1 Risk measurement

We measure these risks within our internal model, distinguishing, where appropriate, between risks affecting the absolute level and

trend development of the actuarial assumptions on the one hand and pandemic risk scenarios on the other. Depending on the nature and complexity of the risks involved, our health business is represented in the internal model according to Property-Casualty or Life/Health calculation methods and is therefore included in the relevant Property-Casualty and Life/Health figures accordingly. However, most of our health business is attributable to the Life/Health business segment.

C.1.2.2 Concentration of risks

Due to effective product design and the diversity of our products, there were no significant concentrations of underwriting risks within our Life/Health business segment.

C.1.2.3 Mitigation of risks

Excessive risks are mitigated by external reinsurance agreements. These measures help to limit risk accumulation; they are actively managed by the Allianz Group, Allianz SE and the other operating entities. Reinsurance-mitigation techniques are a standard element of our risk capital framework. The Group Actuarial function regularly assesses the adequacy of the reinsurance agreements undertaken.

In addition, assessing risks as part of the underwriting and product approval process is a key element of our risk management framework and the assessment is reflected in the modeling of risk capital. This is also incorporated in adequate pricing techniques. Moreover, regular risk exposure monitoring, reporting and escalation processes are in place, allowing for potential remediation actions to be undertaken if required.

Due to low materiality, there are no additional or aggregate non-market risk limits for the Life/Health business segment set at this stage.

C.1.2.4 Risk sensitivity

In order to adequately manage our risk exposure to longevity risk, we perform stress tests. A one-in-ten-year event, for example, would decrease our Solvency II capitalization ratio by 1 percentage point.

C.1.3 Results

As of 31 December 2024, the diversified total net Non-Life underwriting risk capital amounted to €15,681,351 thou (2023: €14,799,281 thou).

The diversified total life and health underwriting risk capital amounted to €6,415,744 thou (2023: €5,472,908 thou).

C.1.4 Business risk

Business risks include cost risks and policyholder behavior risks. They are mostly driven by the Life/Health business and to a lesser extent by the Property-Casualty and the Asset Management business. Cost risks are associated with the risk that expenses incurred in administering insurance policies – or investment management expenses for portfolio management – are higher than expected or that new business volume decreases to a level that does not allow Allianz to absorb its fixed costs. Business risk is measured relative to baseline plans.

For the Life/Health business, policyholder behavior risks are risks related to unpredictable, adverse behavior of policyholders in exercising their contractual options, such as early terminations of contracts, surrenders, partial withdrawals, renewals, and annuity take-up options.

C.1.4.1 Risk measurement

Assumptions on policyholder behavior are set in line with accepted actuarial methods and based on own historical data, where available. If there is no historical data, assumptions are based on industry data or expert judgment. These are used as a basis to determine the economic impact of policyholder behavior under different scenarios within our internal model.

The potential interaction between market risks (in particular interest rate risk) and lapse risk is covered by two different modeling aspects:

- Financial rationality: The Life/Health cashflow models generally contain a dynamic modeling of lapse where the best estimate lapse rate is increased if market returns are significantly higher than the overall return of the insurance policy and vice versa.
- Cross effects: This part takes into account that a combined impact of a market rate change and a lapse rate change could deviate significantly from the sum of the two impacts.

C.1.4.2 Concentration of risks

Based on our assessments, the Allianz Group does not have any significant business risk concentrations.

C.1.4.3 Mitigation of risks

No material risk-mitigation techniques are used with regard to business risks.

C.1.4.4 Risk sensitivity

In order to adequately manage our risk exposure to cost risk, we perform stress tests. A one-in-ten-year event, for example, would decrease our Solvency II capitalization ratio by 2 percentage points.

Additionally, for the lapse risk in the Life/Health segment two, kinds of recurring market related analyses are performed:

- Review of dynamic lapse modeling: The current local assumptions are compared to actual lapse rate changes that were observed after strong market movements.
- Review of cross effects: Observed strong market movements are used as basis for a recalculation of combined shocks and a review of the current calibration.

C.1.5 Results

As of 31 December 2024, the respective total diversified business risk capital amounted to € 3,607,680 thou (2023: € 3,513,144 thou).

C.2 MARKET RISK

As an inherent part of our insurance operations, we collect premiums from our policyholders and invest them in a wide variety of assets. The resulting investment portfolios back the future claims payments and benefits to our customers. In addition, we also invest shareholders' capital, which is required to support the business. Finally, we use derivatives, mostly to hedge our portfolio against adverse market movements (for example, protective puts) or to reduce our reinvestment risk (for example, by using forwards, swaps, or swaptions). Asset/liability management (ALM) decisions are made based on the internal model, considering both the risks and the returns on the financial market.

As the fair values of our investment portfolios and liabilities depend on the changes observed in the financial markets, we are exposed to the risk of adverse financial market developments. The long-dated liabilities in our Life/Health business segment and those attributable to internal pensions contribute to interest rate risk, in particular when they cannot be fully matched by available investments due to long maturities. In addition, we are also exposed to adverse changes in equity and real estate prices, credit spread levels, inflation, implied volatilities, and currencies, which might impact the value of our assets and liabilities.

Allianz, as a multinational financial services provider with major operations especially in Europe, the United States, and Asia is particularly affected by geopolitical developments and economic headwinds due to trade conflicts. The shift to a multi-polar world increases geopolitical volatility and for Allianz, frictions in global trade and rising geopolitical risk may result in various risks including market risk.

C.2.1 Risk measurement

To measure market risks, real-world stochastic models¹ for the relevant risk factors are calibrated using historical time series to generate possible future market developments. After the scenarios for all the risk factors are generated, the asset and liability positions are revalued under each scenario. The worst-case outcome of the sorted portfolio

profit and loss distribution at a certain confidence level (99.5%) defines the market Value at Risk (VaR). For entities modeled using the standard formula, the market risk is based on aggregating the losses under specified standard formula shock scenarios.

More information about the internal model methodology and an overview of the standard formula can be found in the section "E.4 Differences between the Standard Formula and any Internal Model Used".

C.2.2 Mitigation of risks

Strategic asset allocation benchmarks and risk limits – including stand-alone interest rate and equity sensitivity limits, and foreign exchange exposure limits – are defined for the Group, Allianz SE, and other related undertakings. Limits are closely monitored and, if a breach occurs, countermeasures are implemented which may include escalation to the respective decision-making bodies and/or the closing of positions.

Furthermore, we have put in place standards for hedging activities, due to the exposure to options and guarantees embedded in our life insurance products. In addition, we optimize our in-force portfolio through transactional levers, such as partly or entirely divesting discontinued products and businesses; structural levers, such as adjusting the product mix; and operational levers, such as partnering with specialists to manage these books of legacy products, also called life back books.

Finally, guidelines are provided by the Group regarding certain investments, new investment products, and the use of derivatives. Compliance with these guidelines is controlled by the risk and controlling functions at Allianz SE and the other operating entities.

With respect to investment assets in the Property-Casualty and Life/Health business segments managed by Allianz's asset managers, guidelines applicable to our insurance undertakings must be clearly elaborated as part of the asset managers' client investment guidelines. Notwithstanding the above, portfolios managed by Allianz's asset managers for the benefit of third-party investment

clients must adhere to the investment frameworks and constraints as defined by and agreed with them.

C.2.3 Concentration of risks

Given the debt and equity investments in our investment portfolio, there is a potential for risk concentrations related to equity, and credit spread risk. Due to long-dated liabilities from the Life/Health business and internal pension liabilities, there is also a potential for a concentration of interest rate risk caused by an asset/liability mismatch, in particular if assets and liabilities cannot be matched by available investments due to long maturities. Concentrations are addressed by our limit system.

Based on our judgment, the Allianz Group does not have any significant market risk concentrations.

C.2.4 Equity risk

Insurance-focused Allianz entities may hold equity investments to diversify their portfolios and to take advantage of expected long-term returns. Strategic asset allocation benchmarks, investment and equity sensitivity limits are used to monitor and manage these exposures. In addition, equity investments fall within the scope of the credit risk platform to avoid single-name risk concentrations. Risks from changes in equity prices are normally associated with decreasing share prices and increasing equity price volatilities. As stock markets might also increase, opportunities may arise from equity investments in those events.

C.2.4.1 Risk sensitivity

As of 31 December 2024, stress tests showed that a decrease in equity markets by 30% would cause a drop in the Solvency II capital ratio of 12 percentage points.

¹ Internal pensions are evaluated and modeled based on deterministic cash flow models, following IAS 19 principles.

C.2.5 Interest rate risk

Allianz is a liability-driven investor. We may suffer an economic loss in the event of falling interest rates as we reinvest maturing assets at lower rates prior to the maturity of liability contracts, if the duration of our assets is shorter than our liabilities. This risk is higher for long-dated life investment and savings products as well as for internal pensions, with a significant part of the Life/Health business segment's interest rate risk coming from Western Europe, mainly from traditional life insurance products with guarantees. Conversely, opportunities may arise when interest rates increase. Interest rate risk is managed within our asset/liability management process and controlled via interest rate sensitivity and duration mismatch limits for the Group and the local entities.

C.2.5.1 Risk sensitivity

As of 31 December 2024, stress tests showed that a decrease in interest rates by 50 basis points would cause a drop in the Solvency II capital ratio by 4 percentage points.

C.2.6 Credit spread risk

Fixed-income assets such as bonds may lose value if credit spreads widen. However, our risk appetite for credit spread risk takes into account the underlying economics of our business model: As a liability-driven investor, we typically hold fixed-income assets until maturity. This implies that we are less affected economically by short-term changes in market prices. In our capacity as a long-term investor, this gives us the opportunity to invest in bonds yielding spreads over the risk-free return and earning this additional yield component.

C.2.6.1 Risk sensitivity

As of 31 December 2024, stress tests showed that an increase in credit spreads for government bonds of 50 basis points would cause a drop in the Solvency II capital ratio by 4 percentage points.

C.2.7 Inflation risk

We are exposed to changing inflation rates, predominantly due to our Property-Casualty insurance obligations, but also due to inflation-indexed internal pension obligations. While inflation assumptions are taken into account in our underwriting, unexpected rising rates of inflation will increase both future claims and expenses, leading to higher liabilities; conversely, if future inflation rates were to be lower than assumed, liabilities would be lower than anticipated. The risk that inflation rates deviate from inflation assumptions is incorporated in our internal model. Potential severe structural breaks are monitored via historical and ad-hoc stress tests. Measures are taken to manage elevated inflation levels. On the Property-Casualty side, these include continuous monitoring of claims inflation, sufficient provisioning, and timely adjustments of premium rates to reflect both actual and expected inflation.

C.2.8 Currency risk

Allianz SE and the other related undertakings of the Allianz Group typically invest in assets which are denominated in the same currency as their liabilities. However, some foreign currency exposures are allowed to support portfolio diversification and tactical investment decisions. Our largest exposure to foreign currency risk comes from our non-euro Group companies: Whenever the euro strengthens, the euro equivalent net asset value of our foreign subsidiaries will decline from an Allianz Group and Allianz SE perspective. However, at the same time, the capital requirements in euro will decrease, partially mitigating the total impact on the Allianz Group's and Allianz SE's capitalization. Based on the Allianz Group's foreign exchange management limit framework, currency risk is monitored and managed at the levels of the Allianz Group, Allianz SE, and the other operating entities of the Allianz Group.

C.2.8.1 Risk sensitivity

As of 31 December 2024, stress tests showed that a weakening of all foreign currencies by 10 % against the euro would cause a drop in the Solvency II capital ratio by 6 percentage points.

C.2.9 Real estate risk

Despite the risk of decreasing real estate values, real estate is a suitable addition to our investment portfolio due to good diversification benefits, as well as to the contribution of relatively predictable, long-term cash flows.

Allianz's Group Investment Committee has defined a framework for standard transactions for real estate equity and commercial real estate loan investments. These standards outline diversification targets, minimum-return thresholds, and other qualitative and quantitative requirements. All transactions that do not meet these standards or have a total investment volume (including costs) exceeding a defined threshold must be reviewed individually by Group Risk and other Group center functions. In addition, all applicable limits must be respected, in particular those resulting from strategic asset allocation as well as its leeways and risk limits, with regards to an investing entity's portfolio.

C.2.10 Results

As of 31 December 2024, the diversified market and credit risk (see table 19 above) amounted to €29,127,340 thou (2023: €29,330,811 thou), of which approximately 83% relates to market risk and 17% to credit risk. The decrease reflects a reduction in market risk impacted by model changes, which was partially offset by a rise in credit risk.

C.3 CREDIT RISK

Credit risk is measured as the potential economic loss in the value of our portfolio that would result from either changes in the credit quality of our counterparties (“migration risk”) or the inability or unwillingness of a counterparty to fulfill contractual obligations (“default risk”).

The Group’s credit risk profile originates from three sources: our investment portfolio, our credit insurance business, and our external reinsurance.

- **Investment portfolio:** Credit risk results from our investments in fixed-income bonds, loans, derivatives, cash positions, and receivables whose value may decrease depending on the credit quality of the obligor. However, losses due to credit events can be shared with the policyholder for certain life insurance products.
- **Credit insurance:** Credit risk arises from potential claim payments on limits granted by Allianz Trade to its policyholders. Allianz Trade insures its policyholders against credit risk associated with short-term trade credits advanced to policyholder’s clients. When the client of the policyholder is unable to meet its payment obligations, Allianz Trade indemnifies the loss to the policyholder.
- **Reinsurance:** Credit risk arises from potential losses from non-recoverability of reinsurance receivables or due to default on benefits under in-force reinsurance treaties. Our reinsurance partners are carefully selected by a dedicated team. Besides focusing on companies with strong credit profiles, we may also require letters of credit, cash deposits, funds withheld or assets held in trust, or other financial measures to further mitigate our exposure to credit risk.

Credit risk is another risk category in which Allianz as a multinational service provider is particularly affected by frictions in global trade and rising geopolitical risk.

C.3.1 Risk measurement

The internal credit risk capital model takes into account the major determinants of credit risk for each instrument, including exposure at default, rating, seniority, collateral, and maturity. Additional

parameters assigned to obligors are migration probabilities and obligor asset correlations reflecting dependencies within the portfolio. Ratings are assigned to single obligors using a clearly defined assignment process. The central components of this assignment process are long-term ratings from external rating agencies, and internal rating models in case of specific internal investment strategies. If available, a dynamic adjustment using market-implied ratings and the most recent qualitative information available is applied.

The loss profile of a given portfolio is obtained using a Monte Carlo simulation, taking into account interdependencies and exposure concentrations per obligor segment. The loss profiles are calculated at different levels of the Allianz Group, and then fed into the internal model at each level for further aggregation across sources of risk to derive diversified credit risk.

Our credit insurance portfolio is modeled by Allianz Trade, based on a proprietary model component which is a local adaptation of the central internal credit risk model. Allianz Trade’s loss profile is integrated in the Group’s internal credit risk model to capture the concentration and diversification effects.

C.3.2 Concentration of risks

Clearly defined processes ensure that exposure concentrations and limit utilizations are monitored and managed. The setting of country and obligor exposure limits from the Group’s perspective (i.e., the maximum concentration limit) takes into account the Allianz Group’s portfolio size and structure as well as our overall risk strategy.

Major exposure concentrations include sovereign and sub-sovereign issuers, supranationals, and financial institutions, as well as counterparty exposures resulting from reinsurance transactions. Our group-wide country and obligor group limit management framework (CrisP) allows us to manage counterparty concentration risk, covering both credit and equity exposures at the Allianz Group, Allianz SE, and other operating entity levels. This limit framework forms the basis for discussions on credit actions and provides notification services featuring the quick and broad communication of credit-related decisions across the Group.

After consideration of risk mitigation techniques, such as requiring a high collateralization for large reinsurance transactions, the credit exposure concentrations towards obligor groups are exclusively sovereign exposures, with the three largest to Italy, France, and Germany. Each of the sovereign commitments remained below € 30 bn in 2024, permitting – and governed by – the strategic credit risk management measures established in the Allianz Group. Consequently, none of the significant credit exposures constitutes a significant risk concentration, i.e., they do not threaten the solvency of the Allianz Group.

C.3.3 Mitigation of risks

Our long-term investment strategy to hold a well-diversified portfolio of investments through the cycle to maturity enables us to keep our portfolio stable even under adverse market conditions. It also gives us the opportunity to earn planned excess returns throughout the entire holding period of the investments.

To ensure effective credit risk management, credit risk limits are derived from our internal risk capital framework, and rating bucket benchmarks are used to define our risk appetite for exposures in the lower investment-grade and non-investment-grade area.

We use the following risk-mitigation techniques to mitigate counterparty risk arising from the following instruments:

Table 21: Risk-mitigation techniques to mitigate counterparty risk

Instrument	Risk mitigation
Derivatives	Standards generally require all Allianz entities to ensure that remaining exposures after netting are collateralized.
Securities lending and repo transactions	Standards generally require all Allianz entities to ensure that remaining exposures after netting are collateralized.
Reinsurance agreements	We may require letters of credit, cash deposits, or other financial measures to further mitigate our exposure to credit risk.
Fixed-income instruments	Standards generally require investing predominantly in high-quality investments and limit highly concentrated portfolio exposures. Where reasonable, collateralized investments are chosen.

These risk-mitigation techniques are considered within the calculation of the credit risk capital.

C.3.4 Risk sensitivity

Sensitivity of credit risk is calculated based on the internal credit risk model by applying stresses to individual input parameters. It is assumed that only the selected parameters change for all exposures and all other input parameters remain constant. The outcome of the analysis is the impact of the applied stress on internal credit risk capital.

As of 31 December 2024, stress tests showed that a rating downgrade by one notch¹ (i.e., a deterioration of credit quality) would cause an increase in pre-diversified internal credit risk capital of 18 %. A relative increase in loss given default of 10% (i.e., a decline in recovery rates in the event of a default) would cause an increase in pre-diversified internal credit risk capital of 7 %.

1_A notch is referred to rating sub-classes, such as "AA+", "AA", "AA-" on Standard & Poor's or "Aa1", "Aa2", "Aa3" on Moody's scale.

C.4 LIQUIDITY RISK

Liquidity risk is defined as the risk that current or future payment obligations cannot be met or can only be met on the basis of adversely altered conditions. Liquidity risk can arise primarily if there are mismatches in the timing of cash in- and outflows.

The liquidity risk profile of Allianz predominantly originates from the uncertainty about the volume and timing of cash needs from insurances liabilities. This especially relates to:

- coverage of various types of catastrophes in the Property-Casualty business, with the frequency of such events anticipated to increase going forward as a result of the unfolding climate change effects,
- mass lapse events or rising lapse rates in the Life/Health insurance business, especially in combination with changes in the relevant capital market environment.

Major risks can also result from derivative transactions used by Allianz to hedge specific market risks.

Allianz is also exposed to liquidity risk due to large operational risk events, which may potentially result in significant cash outflows.

Another source of liquidity risk for Allianz are potential regulatory actions by local supervisors, which may reduce dividends from subsidiaries to the Group (e.g., due to global events such as partially observed during the COVID-19 crisis).

C.4.1 Risk measurement

Each legal entity of the Allianz Group measures and manages liquidity risk locally, using asset/liability management systems designed to ensure that assets and liabilities are adequately matched. Local investment strategies particularly focus on the quality of the investments and ensure a significant portion of liquid assets (e.g., high-rated government bonds or covered bonds) in the portfolios. In the course of the liquidity planning, liquidity sources (e.g., cash from investments and premiums) and liquidity needs (e.g., payments due to insurance claims and expenses) are reconciled under a best-estimate plan, as well as under adverse idiosyncratic and systemic liquidity scenarios with time horizons of up to 12 months, to allow for a

consistent view on liquidity risk across the Group. These analyses are predominantly performed at legal entity level and are monitored by the Group for large- and mid-sized units.

The annual and the high-level three-year cash flow plan for Allianz SE and the Holding and Treasury reportable segment reflect the overall operating, financing, and investing strategy of the Allianz Group. The liquidity stress-testing framework of Allianz SE is identical to that of the other legal entities. Major contingent liquidity requirements arise mainly from market risk scenarios for Allianz SE and its subsidiaries, from the non-availability of external capital markets, and from reinsurance risk scenarios for Allianz SE.

In addition, the cash position of the Group cash pool investment portfolio is monitored and forecasted on a daily basis.

In the liquidity risk measurement process, early warning and limit thresholds are applied to regularly measure the local (stressed) liquidity position, inform senior management, and decide on actions if needed.

The management of Allianz's liquidity risk at a local level is facilitated by a dedicated governance and organizational setup. In general, the First Line of Defense is responsible for managing liquidity risk. Monitoring of liquidity risk is the responsibility of the local Risk Management functions, and potential liquidity gaps are reported to the respective local boards of management.

C.4.2 Concentration of risks

Liquidity risk is managed locally and there are no significant liquidity risk concentrations at the Allianz Group and Allianz SE levels. Furthermore, a number of different external and internal liquidity sources are available for Allianz SE to ensure sufficient liquidity when facing extreme idiosyncratic and systemic liquidity shocks. For example, a potential worsening of the liquidity situation of Allianz SE caused by subsidiaries simultaneously withdrawing their cash pool deposits is measured via a respective stress scenario.

A potential concentration of liquidity risk for Allianz SE as the holding company of the Allianz Group may result whenever a number of Allianz subsidiaries is affected at the same time by the same risk

event. For example, several Property-Casualty entities may be exposed to the same natural catastrophe event.

C.4.3 Mitigation of risks

Various risk mitigation activities are in place at Allianz to reduce or avoid liquidity risk. In general, expected liquidity gaps from the insurance business are limited by investment strategies based on asset-liability-management.

Potential unexpected liquidity gaps are managed in various ways:

The basic strategy on the investment side is to hold a sufficient buffer of liquid assets, which can be sold to generate cash whenever needed.

In the life and health business, the liquidity of insurance liabilities is limited by reducing policyholders' incentives to terminate contracts, e.g., by fiscal authorities via tax rules, and by embedded economic penalties.

In the property/casualty business, the potential concentration of local liquidity risks from natural catastrophe events at Allianz Group level is mitigated by the regional diversification of the business across the entities.

Other liquidity risk mitigations at Allianz Group level include the design of reinsurance programs (e.g., including terms for accelerated payments by the reinsurers), as well as the preparedness for generating liquidity via capital market funding (e.g., money market funding via the issuance of commercial papers or asset repurchase transactions, or the issuance of bonds or equity capital increases).

Last but not least, regular liquidity risk measurement under appropriate stress assumptions provides Allianz with the necessary instrument to identify potential risks in a timely manner and proactively address those risks before they arise.

In the event that a liquidity risk limit breach occurs at Allianz SE or another operating entity for at least one of the scenarios defined in the liquidity risk management framework, mitigation measures have to be prepared. Depending on the size of the liquidity gap, different escalation levels are in place at local and Allianz Group level, which may require risk committee involvement.

Allianz performs checks on the effectiveness of liquidity risk mitigation actions. These primarily involve regular reviews of haircuts and volume caps used for the measurement and monitoring of liquidity risk, but also include experience gained in the execution of asset sale programs.

C.4.4 Risk sensitivity

As part of the liquidity risk framework, insurance legal entities in scope for Group reporting, including Allianz SE, are required to submit a liquidity risk report to the Group on a quarterly basis. Key features comprise a projection of cash inflows and outflows over different time horizons, the application of various stress scenarios (both idiosyncratic and market-wide: e.g., premium, claim, and market stresses), an assessment of available countermeasures, including the sale of liquid assets, and an aggregation using KPIs, such as the liquidity intensity ratio. Thresholds for warning levels and limit breaches ensure that management is able to quickly assess the liquidity situation of insurance legal entities under current and hypothetical aggravated market conditions (reflected by the stress scenarios).

As of 31 December 2024, no liquidity limit breach has been observed at the entities in scope of liquidity reporting.

C.4.5 Expected profit included in future premiums

The expected profit included in future premiums amounted to € 20,633,280 thou.

C.5 OPERATIONAL RISK

Operational risks refer to losses resulting from inadequate or failed internal processes, human errors, system failures, and external events, and can stem from a wide variety of sources, including the following:

- **“Clients, Products, and Business Practices”**: potential losses due to a failure to meet the professional obligations or from the design of products. Examples include mis-selling, non-compliance with internal or external requirements related to products, anti-trust behavior, data protection, sanctions and embargoes, etc. These losses tend to be less frequent but, when they occur, can have a high financial (and reputational) impact.
- **“Execution, Delivery and Process Management”**: potential losses arising from transaction or process management failures. Examples include interest and penalties from non-payment or underpayment of taxes, or losses associated with broker and agent distribution processes. These losses tend to be of a relatively higher frequency but with little financial impact (although single large-loss events can occur).
- **Other operational risks** including, for example, internal or external fraud, financial misstatement risk, IT risks (such as a cybersecurity incident causing limited availability, loss of confidentiality or integrity, or regulatory fines), IT-related risks (such as improper delivery/design or operational stability), a potential failure at our outsourcing partners causing a disruption to our working environment, etc.

In the last year, the following two operational risks related to IT have gained in importance in particular:

The increasing attention to operational risks resulting from fast developments in the area of artificial intelligence (AI), including generative AI, has gained further momentum with the publishing of the European Union AI Act. The act aims to regulate artificial intelligence by categorizing AI systems based on their risk level (unacceptable, high, limited, or minimal). It introduces stringent requirements for high-risk AI systems, including rigorous testing, documentation, and transparency measures. Allianz has engaged in a cross-functional program to align the existing AI governance framework to the dictate of the European Act. The currently in force AI governance includes practical guidance for AI promoting

transparency, privacy, fairness, human agency and accountability in the development and deployment of AI solutions. Privacy and ethics impact assessments help to implement these AI principles on a case-by-case basis. These activities are supported by various training and awareness campaigns for Allianz employees, and by a data advisory board preparing decisions for the Board of Management in the area of AI and data ethics. To implement the European Union AI Act, the Allianz AI governance framework will be further adjusted and structurally rolled out in the operating entities.

The second operational risk is compliance with rising regulatory requirements on the management of IT risks. Findings from the 2022 audit of BaFin on the implementation of the supervisory requirements for insurance on IT (VAIT) at Allianz SE were successfully remediated by the end of 2023. To address the European Commission's Digital Operational Resilience Act (DORA) and similar requirements from local regulators relevant for the Allianz Group, and to achieve compliance with the large number of very granular prescriptive DORA standards, an extensive program was initiated during 2023, led by Group IT, and with contributions from the 2nd Line of Defense.

In line with advancements across the financial sector, Allianz continues to enhance its comprehensive Digital Operating Model. This model encompasses an integrated and structured framework across all lines of defense, enforcing the robust implementation of necessary controls within our operating entities and at providers of IT and shared services. Additionally, it includes the adaptation of rigorous oversight mechanisms and comprehensive reporting to meet evolving industry standards.

For Allianz as a multinational financial services provider, the high degree of uncertainty in geopolitical developments has the potential to materially affect business vitality, e.g., its stability and profitability. Thus, for Allianz, geopolitical risks may result in operational risks.

The Allianz Group's operational risk primarily refers to losses in either the insurance or the asset management business, or both.

The Group's operational risk capital is dominated by the risk of potential losses within the categories “Clients, Products, and Business Practices” and “Execution, Delivery, and Process Management”. With regard to the largest category “Clients, Products, and Business Practices”, key external drivers are changes in laws and regulations.

Internal drivers reflect potential failures of internal processes. These drivers are considered in the local scenario analyses.

C.5.1 Risk measurement

Operational risk capital is calculated using a scenario-based approach based on expert judgment, as well as internal and external operational loss data. The estimates for frequency and severity of potential loss events for each material operational risk category are assessed and used as a basis for our internal model calibration.

Allianz has developed a consistent operational risk management framework, which is applied across the Group based on proportionality and focuses on the early recognition and proactive management of material operational risks. The framework defines roles and responsibilities as well as management processes and methods: Local risk managers at Allianz SE and at the other operating entities of the Allianz Group, in their capacity as Second Line of Defense, identify and evaluate relevant operational risks and control deficiencies via a dialogue with the First Line of Defense, report operational risk events in a central database, and ensure that the framework is implemented in their respective operating entity.

C.5.2 Concentration of risks

Operational risk concentrations are managed according to our internal control system.

In alignment with DORA requirements, Allianz has enhanced the management of vendor concentration risk by integrating a contract level concentration risk assessment into the third-party risk management lifecycle, which includes a bottom-up concentration assessment approach. Results are to be aggregated from the contract or service level to the vendor level, and finally to the portfolio level. The enhanced vendor concentration risk management framework is currently being finalized and implemented with the aim of full implementation in 2025.

Based on our assessment, the Allianz Group does not have any significant operational risk concentrations.

C.5.3 Mitigation of risks

The operational risk management framework triggers specific mitigating control programs. For example, compliance risks are addressed with written policies and dedicated compliance programs monitored by compliance functions across the Allianz Group. The risk of financial misstatement is mitigated by a system of internal controls covering financial reporting. Outsourcing risks are covered by our Outsourcing Policy, Service Level Agreements, and Business Continuity and Crisis Management programs to protect critical business functions from these events. Cyber risks are mitigated through investments in cybersecurity, cyber insurance that Allianz buys from third-party insurers, and a variety of ongoing control activities, developed and implemented along the following main themes: slow down hackers, increase threat detection, reduce the damage of attacks, and enhance the skills as well as the organizational structure.

Due to the particular importance of operational risks for the Asset Management business, the quality of the operational risk controls environment has become an enhanced focus for our asset managers, and the regular monitoring of the internal controls attached to material processes is a key task for the local Risk Management functions in the related entities. This is also supported by the concept of Non-Financial Risk Management (NFRM).

The ICS for operational risk encompasses the management of compliance, financial reporting, and other operational risks. The effectiveness of this internal control system is monitored along two dimensions:

- Monitoring the effective implementation of the NFRM framework, which is progressively replacing the Integrated Risk and Control System (IRCS) framework. If correctly implemented, these frameworks ensure that risks are identified in time, and controls are appropriately set up and tested frequently to identify potential weaknesses or gaps in the internal control system.
- Monitoring the resolution of identified weaknesses in the internal control system.

NFRM strengthens the internal control system by using a risk taxonomy consistent across the Group and by using a rigorous testing approach. It was rolled out in so-called waves, with close monitoring by Group Risk and Group Compliance. Operating entities from the final wave 3 implemented NFRM in 2024.

The NFRM is an integral part of the overall ICS, whose fundamentals are described in the section “Risk Governance System and Internal Control System”.

The NFRM is the framework by which the Second Line of Defense supports and facilitates the fulfillment of the First Line of Defense responsibility to implement an adequate and effective system for managing Non-Financial Risks. The NFRM aims to strengthen the control system by using a harmonized methodology to:

- Achieve a consistent and commonly accepted definition of risks that fall under the category Non-Financial Risk, by establishing a set of non-financial risk vectors.
- Facilitate the implementation of adequate controls via an NFRM control catalog, consisting of control objectives, risk scenarios, and exemplary key controls.
- Ensure a robust testing of these controls, using a systematic risk-based approach.

To achieve these targets, NFRM has connected and evolved the pre-existing pillars and tools of the Allianz Risk Management and Internal Control System framework, e.g., the Top Risk Assessment (TRA) methodology, and the use of internal and external operational loss events.

The NFRM framework has the following key features:

- Objective data is used through a consistent methodology to facilitate a baseline assessment of non-financial risks.
- An assessment of top non-financial risks prioritizes risks to better allocate resources.
- A process-level view is used to approach risks and controls from a business view, and to facilitate integrated assurance.
- Standardized key controls are defined to support compliance and risk management by design, and to enforce integrated assurance and testing rigor.

The concept of a holistic approach is fundamental to the NFRM. While there are several different sources of operational risks, the process towards the management of the risks always follows the same core principle. This is that operational risks must be identified, assessed, and prioritized, and underlying mitigating controls have to be effective. This is the basic premise behind establishing an integrated approach.

At the Allianz Group level, it is important to monitor the quality of the local implementation of this framework as a means of ensuring that internal control system weaknesses are identified prior to the occurrence of operational risk events (ex-ante).

To fulfill this objective, Allianz relies on a methodology known as the OE control environment rating. The OE control environment rating evaluates the effectiveness of the framework at the operating entity level by leveraging several sources of data and KPIs, which are then further enhanced via certain qualitative criteria.

Additionally, an Allianz group-wide Executive Accountability Regime (EAR) is in place to further support the integration of risk management into business processes. It is essential that the Board of Management demonstrates a strong risk culture to support this integration – they lead by example in order to make clear throughout the business that the management of risks is an important factor when it comes to the achievement of business objectives.

In 2024, the design principles for the EAR have been further updated, now including confirmation from the Chief Executive Officer of the respective operating entity as the formal proof of the local specification and implementation of EAR accountabilities. The relevant divisional member of the Board of Management of Allianz SE is now responsible for reviewing the EAR assessment of the confirmation from the Chief Executive Officer of the respective operating entity. This update will further enhance the effectiveness of the EAR.

C.5.4 Risk sensitivity

Sensitivities, including estimates of frequency and severity for material operational risk events, are calculated based on scenarios. These scenarios are used as the basis for our internal model calibration.

C.5.5 Results

As of the end of 2024, the total diversified operational risk amounted to € 4,439,137 thou (2023: € 4,251,638 thou).

C.6 OTHER MATERIAL RISKS

There are risks which, due to their nature, cannot be adequately addressed or mitigated by setting aside dedicated capital. These risks are therefore not considered in the internal model. For the identification, analysis, assessment, monitoring, and management of these risks we also use a systematic approach, with risk assessment generally based on qualitative criteria or scenario analyses. The most important of these other risks are liquidity, reputational and strategic risk.

C.6.1 Strategic risk

Strategic risk is the risk of a decrease in the company's value arising from adverse management decisions on business strategies and their implementation.

C.6.1.1 Risk measurement and mitigation

Strategic risks are identified and evaluated as part of the Group's Top Risk Assessment process and discussed in various Board of Management-level committees (for example, GFRC). We also monitor market and competitive conditions, capital market requirements, regulatory conditions, etc., to decide if strategic adjustments are necessary.

The most important strategic risks are related to the value creation objective, which focuses on the three themes: driving smart growth, reinforcing productivity, and strengthening resilience. Progress on mitigating strategic risks and meeting the value creation objective is monitored and evaluated in the course of the Strategic and Planning Dialogues between the Allianz Group and Allianz SE, and the other related undertakings.

C.6.2 Reputational risk

Allianz's reputation as a well-respected and socially aware provider of financial services is influenced by our behavior in a range of areas such as product quality, corporate governance, financial performance, customer service, employee relations, intellectual capital, and corporate responsibility.

Reputational risk is the potential occurrence of an event that negatively affects the trust, perception and behavior of stakeholders, due to the event's contrast to their beliefs and expectations. This includes, but is not limited to, the risk of an unexpected drop in the Allianz share price, the value of in-force business, or the value of future business caused by a loss of trust capital and decline in the reputation of the Allianz Group or of one or more of its operating entities from the perspective of stakeholders.

C.6.2.1 Risk measurement and mitigation

The identification and assessment of reputational risks is part of the annual Top Risk Assessment process, undertaken by the Allianz Group and all operating entities. As part of this process, senior management approves the risk strategy for the most significant risks and their potential reputational impact.

C.6.3 Emerging risks

The risk management of Allianz does not exclusively focus on already known and assessed risks but also on monitoring and identifying new and emerging risks or trends that may have an impact on our business over a longer time horizon. To this end, Allianz employs internal and external expert insights, e.g., gathered in the Emerging Risk Initiative of the CRO Forum, as well as in established internal risk management processes such as the Top Risk Assessment, an Emerging Risk Radar, and ad-hoc risk scenarios.

From an overall perspective, we currently consider cyber risk and new technologies, geopolitical risk, and ESG-related risk as relevant examples of emerging risks with a potential impact on the Allianz Group's future business development.

The volume and sophistication of malicious cyber activity has increased substantially in line with new technologies, and there are growing concerns regarding the security of proprietary corporate data and critical industrial control systems. At the same time, the attention of regulators to cyber risk in order to ensure safe digital business environments has increased. Cybersecurity incidents may cause business disruption or fines to Allianz. Cyber risks are mitigated as described in the section "Operational Risk".

New and evolving operational and reputational risks also result from fast developments in the area of AI. The mitigation of risks from AI (including generative AI) is also described in the section "Operational Risk".

In comparison to political risk, which only includes risk arising within a nation-state or governed area, geopolitical risk involves the interaction between two or more states or governed areas, radiating to the global power system. This risk encompasses political, socioeconomic, and cultural factors that can significantly influence the global operations of multinational companies.

As a multinational financial services provider, Allianz faces considerable geopolitical risk. For further details on geopolitical risk, see the section "Solvency capital requirement per risk category". We consider this risk as both current and emerging, given that the current shift to a multi-polar world further increases geopolitical volatility. This leads to a high degree of uncertainty in geopolitical developments that have the potential to materially affect a business's vitality, e.g., its stability and profitability.

For Allianz, geopolitical risk results in a variety of operational, macroeconomic and reputational risks. To mitigate these risks, Allianz uses ad-hoc stress scenarios to quantify the macroeconomic impact of potential global conflicts, election outcomes, or trade tensions, and applies robust due diligence processes to identify and reduce operational and reputational risks.

The future potential impact of ESG-related risks can be manifold. While an understanding of the general nature of ESG risks is well established, we consider the medium- and long-term development of these risks as dynamic and subject to much uncertainty, hence their classification as emerging. In addition to the aspects mentioned in the section "Risks related to Environmental, Social and Governance events and conditions", the expansion of sustainability-related regulation requires appropriate implementation and investments to ensure compliance, particularly against the background of Allianz's strategy to be a sustainability leader. Similarly, intentional or alleged failure to comply with sustainability standards and targets could negatively impact the public perception of Allianz. The risk of being accused of greenwashing also exists in the medium to long-term, particularly if the achievement of sustainability milestones proves to be more difficult than anticipated.

Emerging ESG risks are mitigated through various measures, including by further strengthening the integration of sustainability considerations in key business areas as well as the related governance. Further details on the mitigation of emerging ESG risks can be found in the section “Risks related to Environmental, Social and Governance events and conditions”.

C.6.4 Risks related to Environmental, Social and Governance events and conditions

Environmental, Social or Governance events and conditions (ESG factors), such as climate change, loss of biodiversity or human rights abuses, are increasingly becoming a relevant source of adverse impacts on our balance sheet, profitability or reputation. These ESG-related risks are characterized by their transversal nature, meaning they may materialize within any of Allianz’s existing risk categories (e.g., market risk, underwriting risk, operational risk) as either a consequence of transitional responses to ESG factors – including regulatory changes, litigation, technological developments and changes in human behavior – or due to physical events, such as droughts, floods or storms, whereby the magnitude or likelihood of the events is attributable to an ESG factor.

Allianz’s strategy for the management of these risks begins with establishing a comprehensive understanding of all the ways ESG factors can trigger adverse events within the investment, underwriting, and operations areas of our business, as well as from a broader reputational perspective. For this purpose, a dedicated ESG risk inventory has been established and a corresponding risk assessment performed, which enables us to take a risk-based view in terms of evaluating the adequacy of mitigation measures in place.

ESG-related mitigation measures may vary substantially, depending on the precise nature of the underlying risk, ranging from establishment of specific controls at the business process level through to adjustments in Allianz’s long-term business strategy. Given that all adverse impacts attributable to ESG factors are ultimately realized within one of Allianz’s existing risk categories, we aim – to the greatest extent possible – to embed the identification and management of these risks directly within pre-existing risk management processes.

C.6.4.1 Risk measurement and mitigation

With respect to consideration of ESG risks in the management of third-party assets, our asset managers AllianzGI and PIMCO each have their own global ESG framework, which supports their client-derived objectives of ESG investing, while complying with globally and locally relevant rules and regulations.

C.6.4.2 Climate change

Amongst a broad landscape of ESG factors, we consider climate change to be the most critical in terms of its potential to materially affect the global economy and our business, especially in the long run. Risks arising from climate change can already be seen today and their relevance will increase over the mid- and long-term.

The most significant risks that have a material impact on our business, or we expect will have in the future, are:

- **Physical risks:** These can for instance be acute and chronic, such as rising temperatures, extreme weather events, rising sea levels, intensifying heatwaves and droughts, or a change in vector-borne diseases, with impacts on property, life, or health.
- **Transitional risks:** These risks result from the cross-sectoral structural change stemming from the transition towards a low-carbon economy. Transitional risks include changes in climate policy, technology, or market sentiment, and the impact of this on the market value of financial assets, as well as the impact from climate change litigation.

These risks impact Allianz’s business in two key ways:

- as a (re-)insurer, providing coverage for e.g., fatality and health impacts, property damage or litigation claims, and through changes in the sectors and business models it underwrites,
- as a large-scale institutional investor with significant stakes in various economies, companies, infrastructure, and real estate that might be affected by the physical impact of climate change and by the transition to a low-carbon economy. This can directly influence the ability of assets to generate long-term value.

We address immediate risks from climate change factors in line with the management approach for the primary underlying risks (i.e., financial risks, premium or reserve risks, reputational risks, etc.). For example, we build on our long-term expertise in the modeling of

extreme weather events or analyzing emission profiles of our proprietary investments. We also review and evaluate climate change issues, arising from our business activities and business relations as part of our reputational risk management through the ESG business integration approach.

On a forward-looking basis, we consider risks from climate change factors under emerging risks, where we closely monitor the development of the risk landscape supported by selective analyses on our portfolios. In this regard, we are developing different approaches towards scenario analysis to further educate our understanding of how climate change risks may unfold in the future.

Climate change also creates opportunities – be it in connection with financing a low-carbon and climate-resilient future, e.g., by investing in renewable energy, energy efficiency of real estate, and electric vehicle infrastructure, or by providing insurance solutions to protect against physical climate impacts and to support low-carbon business models.

C.6.5 Intra-group transactions

For further information on significant intra-group transactions, please refer to the section “A.1.4.3 Relevant transactions within the Group”.

Overall, management holds the view that the various types of intra-group financial transactions are essential for the Group’s business model, as they allow the Group to take advantage of economies of scale, including the fungibility of resources and risk diversification. Based on the assessment performed, it has also been concluded that there is an appropriate governance structure and risk management system in place for intra-group financial transactions.

However, management acknowledges that intra-group transactions add to the Group’s complexity and to internal interconnectedness and seeks to avoid unnecessary intra-group transactions. All such transactions are subject to approval limit requirements. Against this background, management currently sees no need for additional actions beyond those that have already been initiated.

C.7 ANY OTHER INFORMATION

C.7.1 Significant risk concentration at the Group level

As mentioned above, financial risk is the most pronounced contributor to our risk profile, and it is driven by our investments and their interaction with the insurance liabilities they are backing. As a result, most of our investment portfolios consist of fixed-income instruments. A breakdown of our fixed-income investments is provided in the table below.

Table 22: Rating distribution of the Allianz Group's fixed-income portfolio¹ – book values

€ thou

Type of issuer (As of 31 December 2024)	Government bonds	Covered bonds	Corporate bonds	Banks	ABS/MBS	Short-term investments	Total
AAA	33,553,403	34,390,909	4,867,822	2,357,184	10,100,107	-	85,269,425
AA	74,941,025	8,917,803	21,952,678	3,147,633	10,959,948	441,175	120,360,262
A	31,933,672	514,098	75,816,153	23,808,531	6,726,349	857,493	139,656,296
BBB	38,367,219	44,104	104,679,007	6,371,688	2,433,430	207,936	152,103,383
BB	7,865,241	-	8,796,823	381,831	233,633	34,120	17,311,647
B	1,510,328	-	3,306,440	67,799	174,258	14,847	5,073,672
CCC	398,673	-	269,400	86,129	120,884	116	875,202
CC	54,027	-	126,740	2,007	49,484	-	232,259
C	4,344	-	32,740	-	23,656	-	60,740
D	-	-	172,391	-	24,872	-	197,263
Not rated	466,214	70,120	13,363,948	83,294	313,150	188,595	14,485,321
Total	189,094,145	43,937,035	233,384,142	36,306,096	31,159,771	1,744,282	535,625,469

1_ In accordance with the Group Management Report, figures stated include investments of the business segments Banking and Asset Management. The table excludes private loans. Stated book values include investments not in scope of the Solvency II framework. Figures for both years are based on IFRS 9.

C.7.2 Other material information

All material information regarding the risk profile has been addressed in the previous sections.

VALUATION FOR SOLVENCY PURPOSES

D

SCOPE OF CONSOLIDATION

The Directive 2009/138/EC is applicable to direct life and non-life insurance undertakings as well as reinsurance undertakings which are established in the European Economic Area (EEA)¹ or wish to become established here. In this context, a (re)insurance undertaking is defined as a direct life or non-life (re)insurance undertaking which has received authorization from the supervisory authorities of the home member state.

Market value balance sheet (MVBS) and Own Funds information has to be collected for both Solo and for Group regulatory reporting. All (re)insurance undertakings within the EEA which are subject to regulatory Solvency II reporting have to provide a Solo MVBS as well as Solo Own Funds in order to fulfill their Solo regulatory reporting requirements. In addition, the Allianz Group has to compile a consolidated Group MVBS and Group Own Funds in order to fulfill the regulatory reporting requirements for the Group. In order to achieve full coverage for the Group, it is required to also collect MVBS and Own Funds information from entities which are not subject to regulations under Solvency II, in addition to the MVBS and Own Funds data delivered by regulated EEA (re)insurers. This means that the Group consists of:

- a) (Re)insurance undertakings within and outside the EEA, and (re)insurance as well as intermediate holdings which are included in the Group MVBS and Group Own Funds with full granular MVBS and Own Funds based on Solvency II.
- b) Selected non-EEA (re)insurers which are included in the Group Own Funds with their Own Funds via the deduction and aggregation method. In the MVBS, these entities are represented through the participation value according to the equity method (i.e., the proportionate shareholders' equity net of goodwill and other intangible assets) as reported by the respective parent entity.
- c) Credit institutions, investment firms and financial institutions, alternative investment fund managers and UCITS² management companies, as well as institutions for occupational retirement provision which are included in the Group Own Funds with their Own

Funds according to the applicable sectoral regime (e.g., Basel III for banks). In the MVBS, these entities are represented through the participation value according to the equity method (i.e., the proportionate shareholders' equity net of goodwill and other intangible assets) as reported by the respective parent entity.

- d) Selected service entities which are represented through the participation value according to the equity method (i.e., the proportionate shareholders' equity net of goodwill and other intangible assets) as reported by their respective parent entity.
- e) Renewable energy and infrastructure investments which are included with a participation value at fair value as reported by their respective parent entity.
- f) Non-regulated subsidiaries of the entities listed above are generally included in the Group MVBS and the Group Own Funds following the respective treatment of their parent entity, except for collective investment undertakings in the meaning of Article 1 (40) Solvency II Delegated Regulation (EU) 2015/35 which are included in the position "7.5 Collective investment undertakings".

Undertakings under a) that are included in the Group MVBS and the Group Own Funds with granular data as described above are included according to the accounting consolidation method as defined by the Solvency II framework. The accounting consolidation method comprises an elimination of intra-group transactions between those entities.

Undertakings included in b) and c) are not subject to intra-group elimination, as the unconsolidated Own Funds from other financial sectors and the unconsolidated Own Funds from undertakings included via the deduction and aggregation method have been submitted to the respective national supervisor and thus have legal authority. To the extent that there are intra-group transactions of entities included in a) with entities from other financial sectors or with entities included via the deduction and aggregation method, which would lead to a double recognition of Own Funds in the Group, these intra-group transactions would be eliminated.

Likewise, intra-group elimination is not applied to entities included in d) and e). Entities included in f) follow the treatment of the respective parent entity with regard to intra-group elimination, except for collective investment undertakings in the meaning of Article 1 (40) Solvency II Delegated Regulation (EU) 2015/35, which are not subject to intra-group elimination.

The bases, methods, and main assumptions used at the Group level for the valuation of the Group's assets, technical provisions, and other liabilities for Solvency II purposes do not differ materially from those used by any of its subsidiaries for the valuation for Solvency purposes.

For some undertakings, the method of inclusion in the Group MVBS changed in 2024 compared to 2023, with no material impact on the Group MVBS excess of assets over liabilities.

Reconciliation of differences between IFRS and MVBS

In order to compare IFRS and MVBS figures, the published IFRS data of the Allianz Group first needs to be remapped to the MVBS line item structure (see column "IFRS remapped to MVBS line items") and, in the second step, is adjusted for the different scope of fully consolidated entities in the consolidated MVBS (see column "IFRS adjusted for MVBS scope").

The second step also includes an adjustment with regard to the intra-group transactions in IFRS. In the MVBS, only intra-group transactions between fully consolidated entities are eliminated. In order to compare IFRS and MVBS figures, the intra-group relationships are only eliminated in the IFRS comparison figures for entities that are fully consolidated in the MVBS.

The following table provides an overview of the reconciliation from "IFRS remapped to MVBS line items" via "IFRS adjusted for MVBS scope" to "MVBS". The column "IFRS adjusted for MVBS scope" provides the basis for the comparison of IFRS and MVBS figures in the subsequent sections.

1_The EEA comprises the European Union plus Iceland, Norway, and Liechtenstein. Switzerland is not part of the EEA.

2_Undertakings for collective investments in transferable securities (UCITS).

Table 23: Reconciliation between IFRS and Solvency II

€ thou

As of 31 December 2024	IFRS remapped to MVBS line items	Adjustment for scope	IFRS adjusted for MVBS scope	Valuation difference	MVBS

Excess of assets over liabilities	64,075,915	-	64,075,915	17,313,980	81,389,895

On the following pages, the differences between IFRS values adjusted for the MVBS scope and MVBS values are explained further for each line item.

There were no changes made to the recognition and valuation bases or main estimations used for the valuation of assets, technical provisions, and other liabilities during the reporting period.

D.1 ASSETS

The asset classes described are the same as used in the MVBS. The aggregation is based on the nature and function of assets and their materiality for Solvency purposes. Unless stated otherwise, only valuation differences between “IFRS adjusted for MVBS scope” and “MVBS” values are discussed in this section.

D.1.1 Goodwill

Goodwill is an intangible asset that arises as the result of a business combination, and which represents the economic value of assets that cannot be individually identified or separately recognized in a business combination.

Goodwill is not recognizable in the MVBS. Under IFRS, goodwill acquired in a business combination is recognized in the consolidated financial statements. Therefore, the difference relates to goodwill recognized in IFRS, while no goodwill is recognized in the MVBS.

D.1.2 Intangible assets

This line item includes intangible assets other than goodwill. Intangible assets are non-monetary assets without physical substance. They are only recognized in the MVBS when they are separable and there is evidence of exchange transactions for the same or similar assets, indicating it is saleable in the marketplace. They are measured at fair value with their market price.

Under IFRS, intangible assets are recognized when the criteria stated under IAS 38 are met and measured at amortized cost. The difference between IFRS and MVBS relates to intangible assets being recognized in IFRS, while they are not recognized in the MVBS.

D.1.3 Deferred tax assets

Deferred tax assets are those amounts of income tax recoverable in future periods which result from deductible temporary differences, carry-forward of unused tax losses, and tax credits.

Deferred taxes – except deferred tax assets arising from the carry-forward of unused tax losses or unused tax credits – are valued on the basis of the difference between the values ascribed to assets and liabilities recognized and valued in accordance with the Directive 2009/138/EC on the one hand, and the values ascribed to assets and liabilities as recognized and valued for tax purposes on the other hand.

The Allianz Group calculates deferred taxes on temporary differences reported in the MVBS by summing up deferred taxes under IFRS, according to IAS 12, and deferred taxes on revaluations with regard to the respective balance sheet items in the MVBS. This delivers deferred taxes on Solvency II values compared to the respective tax base.

Temporary differences between the Solvency II value of the assets and liabilities and their corresponding tax base as defined in IAS 12 are assessed consistently per balance sheet item. The deferred tax calculation takes into account the tax regulations specific to particular assets and liabilities in the applicable tax regime.

The tax rates used in the calculation of the Allianz Group's deferred taxes are the applicable national tax rates. Changes to tax rates in Luxembourg and Slovakia have been applied by 31 December 2024.

Deferred tax assets and liabilities are offset if they relate to income taxes levied by the same taxation authority on the same taxable entity, and if a legally enforceable right to set off income tax assets against income tax liabilities exists.

Deferred tax assets and liabilities are not discounted.

Deferred tax assets are recognized only to the extent it is probable that sufficient future taxable income will be available for their realization. Assessment requires the use of judgment regarding assumptions related to estimated future taxable profits. The following aspects are considered:

- the type and amount of taxable income,
- the periods in which the income will arise,
- the timing of the reversal of the deductible temporary differences underlying the deferred tax assets, and
- the local tax regulations (e.g., for loss carryforward periods).

The availability of tax planning opportunities is also taken into account.

Recognition and realizability of deferred tax assets in the MVBS are determined and evaluated by qualified local tax and financial professionals. To ensure consistency and reliability of the recoverability assessment process, group-wide policies and procedures have been designed in accordance with IAS 12. Forecast operating results are based upon approved business plans, which are themselves subject to a well-defined and controlled process. As a matter of policy, particularly strong evidence to support the recognition of deferred tax assets is required if a Group entity shows tax losses carryforward or a loss history that cannot be relieved by one-off effects that have already been taken into account.

The recoverability of deferred tax assets in the MVBS of €51,548,312 thou is substantiated by deferred tax liabilities of €49,320,454 thou. The exceeding amount of €2,227,858 thou is assessed as recoverable, taking into account future taxable income.

Table 24: Deferred tax assets and tax liabilities

€ thou

As of 31 December 2024	IFRS re-mapped to MVBS line items	Adjustment for scope	IFRS adjusted for MVBS scope ¹	Valuation difference	MVBS

Investments	20,755,898	(10,637,997)	10,117,902	1,544,491	11,662,393
Insurance contract assets/liabilities	30,500,790	(3,669,768)	26,831,022	12,054,558	38,885,579
Other assets ²	2,547,577	(212,536)	2,335,041	4,579,085	6,914,127
Intangible assets	1,572,362	(894,368)	677,994	(475,564)	202,430
Pensions and similar obligations	732,938	(4,731)	728,207	(3)	728,203
Other liabilities ²	3,229,864	(1,377,761)	1,852,104	(2,726)	1,849,378
Total deferred tax liabilities	59,339,430	(16,797,161)	42,542,269	17,699,841	60,242,110
Effect of netting	(57,082,690)	16,871,894	(40,210,796)	(9,109,659)	(49,320,454)
Net deferred tax liabilities	2,256,741	74,733	2,331,473	8,590,183	10,921,656
Net deferred tax assets (liabilities)	3,798,580	(3,670,533)	128,047	(8,821,845)	(8,693,798)

1_For collective investment undertakings, deferred taxes are presented on a net basis in line with pre-tax data.

2_Include deferred taxes from balance sheet reclassifications in the MVBS (e.g. receivables and payables to insurance contract assets/liabilities).

An amount of deferred tax assets after offsetting with deferred tax liabilities of € 2,227,858 thou in MVBS relates to balance sheet items and tax loss carryforwards which are expected to be reversed or used over a mid- to long-term period. Thereof, an amount of deferred tax assets after offsetting with deferred tax liabilities of € 696,023 thou in the MVBS relates to tax losses (e.g., in France, Germany, and Luxembourg) which are expected to be reversed over a period of less than ten years.

For tax losses carried forward of € 2,724,571 thou, deferred tax assets of € 686,816 thou were not recognized under IFRS because it is not probable that future taxable profit will be available. According to tax legislation, an amount of € 2,295,421 thou of these tax losses may be carried forward indefinitely and in unlimited amounts, whereas another € 429,149 thou will expire over the next 20 years if not utilized.

D.1.4 Pension benefit surplus

Pension benefit obligations include net obligations related to the employee pension schemes. The pension benefit surplus is the net surplus related to the employee pension schemes, if applicable according to the pension schemes. Post-employment benefits refer to employee benefits other than termination benefits payable after completion of employment. Post-employment benefits are classified as either defined contribution or defined benefit plans. The pension benefit surplus is valued in line with IAS 19.

There is no difference between IFRS and MVBS values.

For more information on pension benefit obligations, please refer to the section “D.3.3 Pension benefit obligations”.

D.1.5 Property, plant and equipment held for own use

Property, plant and equipment held for own use includes tangible assets which are intended for permanent use, and property held by the Group for own use. It also includes property for own use under construction. Property, plant and equipment held for own use is measured at fair value in the MVBS.

The fair value is primarily determined using the income approach or, in some cases, the market approach using market prices of comparable assets in markets that are not active. Fair values are either calculated internally and validated by external experts or derived from expert appraisals with internal controls in place to monitor these valuations.

The difference between IFRS and MVBS values is due to the partially different measurement basis. Parts of property, plant and equipment held for own use are measured at amortized cost under IFRS, while they are shown at fair value in the MVBS.

D.1.6 Investments (other than assets held for index-linked and unit-linked funds)

Investments are measured at fair value for Solvency II purposes. When quoted prices in active markets are available for the valuation of investments, those prices are used for the measurement under Solvency II. An active market thereby follows the definition of IFRS 13, where an active market is a market in which transactions for the asset or liability take place with sufficient frequency and volume to provide pricing information on an ongoing basis. An active market is a market where all of the following conditions exist:

- the items traded within the market are homogeneous,
- willing buyers and sellers can normally be found at any time, and
- prices are available to the public.

If quoted prices in active markets for the investments are not available, other valuation methods are used. These valuation techniques are consistent with the valuation techniques listed in IFRS 13 and in the Solvency II guidance and include the following:

- **Market approach:** prices and other relevant information generated by market transactions involving identical or comparable assets or liabilities.
- **Cost approach:** amount that would currently be required to replace the service capacity of an asset (current replacement cost).
- **Income approach:** conversion of future amounts such as cash flows or income to a single current amount (present value technique).

In each MVBS line relating to investments, the valuation techniques used are described.

In general, the subsidiaries assume responsibility for assessing the fair values of assets and liabilities in compliance with Group guidelines. Estimates and assumptions are particularly significant when determining the fair value of financial instruments for which at least one significant input is not based on observable market data. The availability of market information is determined by the relative trading levels of identical or similar instruments in the market, with emphasis placed on information that represents actual market activity or binding quotations from brokers or dealers.

The degree of judgment used in measuring the fair value of financial instruments closely correlates with the level of non-market observable inputs. The Allianz Group uses a maximum of observable inputs and a minimum of non-market observable inputs to measure fair value. Observability of input parameters is influenced by various factors such as the type of financial instrument, whether a market is established for the particular instrument, specific transaction characteristics, liquidity, and general market conditions. If the fair value cannot be measured reliably, amortized cost is used as a proxy for determining fair values.

The fair value hierarchy in IFRS 13 categorizes the inputs to valuation techniques used to measure fair value into three levels:

- **Level 1:** a quoted price in an active market without adjustment.
- **Level 2:** inputs other than quoted prices included within level 1 that are either directly or indirectly observable.
- **Level 3:** not all input parameters are observable in the market.

D.1.6.1 Property (other than for own use)

Property (other than for own use) includes property used as investment property. Investment property is measured at fair value.

The fair value is mainly determined based on the income approach or, in some cases, the market approach using market prices of comparable assets in markets which are not active. Fair values are either calculated internally and validated by external experts or derived from expert appraisals with internal controls in place to monitor these valuations.

The difference between IFRS and MVBS values is due to the partially different measurement basis. Parts of investment property are measured at amortized cost under IFRS, while they are shown at fair value in the MVBS.

D.1.6.2 Holdings in related undertakings, including participations

According to Article 13 (20) of the Directive 2009/138/EC, “Holdings in related undertakings, including participations” are defined as the ownership, direct or by way of control, of 20% or more of the voting rights or capital of an undertaking. The following table provides an overview of the consolidated financial data for the computation of the Group Solvency according to Article 335 of the Delegated Regulation (EU) 2015/35 and according to IFRS.

Table 25: Inclusion of undertakings

	Regulation rule	Industry	Inclusion according to MVBS	Inclusion according to IFRS
1	Article 335 (1) (a) and (b) of the Delegated Regulation (EU) 2015/35	Insurance or reinsurance undertakings within the EEA, third-country insurance or reinsurance undertakings, insurance holding companies, mixed financial holding companies and ancillary services undertakings as well as special purpose vehicles	Full consolidation	Full consolidation
2	Article 335 (1) (d) of the Delegated Regulation (EU) 2015/35	Insurance or reinsurance undertakings within the EEA, third-country insurance or reinsurance undertakings, insurance holding companies, mixed financial holding companies that are not subsidiaries of the parent undertaking	Holdings in related undertakings, including participations	At equity
3	Article 335 (1) (e) of the Delegated Regulation (EU) 2015/35	Holdings in related undertakings which are credit institutions, investment firms and financial institutions, alternative investment fund managers, UCITS management companies, institutions for occupational retirement provision, non-regulated undertakings carrying out financial activities	Holdings in related undertakings, including participations	Full consolidation or at equity
4	Article 335 (1) (f) of the Delegated Regulation (EU) 2015/35	All related undertakings, including ancillary service undertakings, other than those referred to in points (a) to (e)	Holdings in related undertakings, including participations ¹	Full consolidation or at equity
5	Article 233 of the Directive 2009/138/EC	Insurance or reinsurance undertakings or insurance holding companies that are included via the deduction and aggregation method	Holdings in related undertakings, including participations	Full consolidation or at equity

¹ Undertakings for collective investment in transferable securities (UCITS) are presented separately in the line item "Collective investments undertakings" and not in the line item "Holdings in related undertakings, including participations".

Fully consolidated entities under item 1 are included in the consolidated Group MVBS with their full granular MVBS based on Solvency II on a line-by-line basis.

The line item "Holdings in related undertakings, including participations" therefore consists of entities included in items 2 to 5. These are included, taking into account the materiality and proportionality principle as described in the following. According to Article 212 of the Directive 2009/138/EC, the participations are valued using quoted market prices in active markets. Where a valuation according to quoted market prices is not possible, the participation value is based on the undertaking's share of the excess of assets over liabilities of the related undertaking's MVBS (adjusted equity method).

When calculating the participation value for undertakings other than insurance or reinsurance, and where the use of quoted market prices or the adjusted equity method is not feasible, the equity method can be used instead. Under this method, the participation value is based on the undertaking's share of the excess of assets over liabilities of the related undertaking's IFRS balance sheet (where goodwill and other intangible assets are valued at zero). The Allianz Group applies the equity method for its non-insurance subsidiaries, as these do not report an MVBS to the Group. In case neither valuation according to quoted market prices nor the adjusted equity method is possible, and the undertaking is not a subsidiary undertaking as defined in Article 212(2) of the Directive 2009/138/EC, quoted market prices in active markets for similar assets and liabilities with adjustments to reflect differences or alternative valuation methods can be used.

Renewable energy and infrastructure investments are measured at fair value in the MVBS using industry-specific valuation methods.

The difference of € 7,367,942 thou in the value of participations under IFRS of € 19,071,767 thou and MVBS of € 26,439,709 thou is driven by scope differences of € 15,813,455 thou and valuation differences of € (8,445,513) thou. Details on the main drivers for scope and valuation differences are disclosed in the following sections.

Scope differences

As described in the section "Scope of consolidation", (re)insurance undertakings within and outside the EEA, and (re)insurance and intermediate holdings (item a)), as well as non-regulated subsidiaries that deliver an MVBS as their treatment follows that of the respective parent (item f)), are fully consolidated in the Group MVBS. This, however, does not include all entities that are fully consolidated under IFRS. Rather, the following undertakings are recognized as holdings in related undertakings in the MVBS, leading to an increase in the value of the participations in the MVBS and to an increase in the "IFRS adjusted for MVBS scope" column of € 15,813,455 thou:

- b) selected non-EEA (re)insurers that are included via the deduction and aggregation method,
- c) entities in other financial sectors,
- d) selected service entities, and
- e) selected renewable energy and infrastructure investments (like e.g., wind parks).

Please refer to the section "Scope of consolidation" for further details.

Valuation differences

In addition to the scope differences mentioned above, there are valuation differences of € (8,445,513) thou between IFRS and MVBS values.

One major driver of this difference results from the fact that the value of participations in the MVBS in b), c), and d) is based on the proportionate IFRS shareholders' equity of the holding undertaking, where goodwill and other intangibles are valued at zero, resulting in a valuation difference of € (9,950,769) thou.

Participations in e) are valued at fair value using industry-specific valuation methods, resulting in a difference of € 219,950 thou.

Finally, parts of participations in associated entities and joint ventures are measured at equity under IFRS, while in the MVBS they are valued as described above, resulting in a difference of € (218,312) thou.

D.1.6.3 Equities

Equities include listed and unlisted equities, i.e., shares representing corporations' capital, e.g., representing ownership in a corporation listed on a public stock exchange. This does not include investees that are fully consolidated in accordance with IFRS, joint ventures accounted for under IFRS 11, and associates accounted for under IAS 28. All financial assets as defined in IFRS 9 are measured at fair value in the MVBS.

The fair value of equities is primarily determined based on market prices. If no quoted prices in active markets are available, the fair value is determined using the net asset value or the income approach. The latter usually applies a present value technique where either the cash flows or the discount curve are adjusted to reflect credit risk and liquidity risk.

There is no difference between IFRS and MVBS values as equities are measured at their fair value under IFRS 9 and in the MVBS.

D.1.6.4 Bonds

This category includes government and corporate bonds, including collateralized securities. Government bonds are bonds issued by public authorities, e.g., central governments, supra-national government institutions, regional governments, or municipal governments. Corporate bonds include bonds issued by corporations and covered bonds, which are backed by cash flows from mortgages or public-sector loans. Collateralized securities comprise securities whose value and payments are derived from a portfolio of underlying assets. They mainly include asset-backed securities (ABS) and mortgage-backed securities (MBS). All financial assets as defined in IFRS 9 are measured at fair value in the MVBS.

The fair value is mainly determined using the market and the income approach. Primary inputs to the market approach are quoted prices for identical or comparable assets in active markets. The income approach in most cases uses a present value technique, where either the cash flows or the discount curve is adjusted to reflect credit risk and liquidity risk.

With regards to the valuation in the MVBS, the difference between IFRS and MVBS values results from bonds classified within a held to collect business model and having contractual agreements that are solely principal and interest (SPPI). Under IFRS they are measured at amortized cost while they are measured at their fair value in the MVBS.

All other bonds are measured at their fair value under IFRS 9 and in the MVBS.

D.1.6.5 Collective investment undertakings (investment funds)

Investment funds are defined as undertakings for collective investment in transferable securities as defined in Article 1 (2) of the Directive 2009/65/EC, or an alternative investment fund as defined in Article 4 (1) of the Directive 2011/61/EU. Investment funds mainly include stock funds, debt funds, real estate funds, private equity funds, and associated investments funds. All financial assets as defined in IFRS 9 are measured at fair value in the MVBS.

The fair value of investment funds is determined by market prices, by using the net asset value or by mark-to-model approaches, depending on whether quoted prices in active markets are available.

There is no material difference between IFRS and MVBS values.

Subsidiaries that are collective investment undertakings in the meaning of Article 1 (40) Delegated Regulation (EU) 2015/35 are included in the Group MVBS in the position 7.5 "Collective investment undertakings", whereas those subsidiaries are fully consolidated in the Group's IFRS balance sheet. This disclosure difference is the key driver for the different values between "IFRS remapped to MVBS line items" and "IFRS adjusted for MVBS scope".

D.1.6.6 Derivatives

Derivatives are financial instruments whose values are based on the price movements of the underlying assets to which they are linked, settled at a future date and require no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors. Derivatives are measured at fair value according to IFRS 9, for both IFRS and MVBS reporting, and their fair value is determined in accordance with IFRS 13.

The fair value is mainly determined based on the income approach using present value techniques and the Black-Scholes-Merton model. Primary inputs to the valuation include volatilities, interest rates, yield curves, and foreign exchange rates observable at commonly quoted intervals.

There is no difference between IFRS and MVBS values. Derivatives with positive values are reported on the asset side.

D.1.6.7 Deposits other than cash equivalents

Deposits other than cash equivalents include deposits other than transferable deposits, i.e., they cannot be used to make payments at any time and they are not exchangeable for cash or transferable deposits without any kind of significant restriction or penalty. Those

short-term investments are measured at nominal amounts as the nominal value is considered a good proxy for the fair value within the materiality and proportionality principles.

All financial assets as defined in IFRS 9 are measured at fair value in the MVBS. The fair value for short-term deposits other than cash equivalents is determined at their nominal amount. Otherwise, the fair value is determined based upon the income approach.

There is virtually no difference between IFRS and MVBS values.

D.1.6.8 Other investments

Other investments include investments not covered by the investment positions described above. All financial assets as defined in IFRS 9 are measured at fair value in the MVBS.

The fair value of other investments is determined based on market prices or using the mark-to-model method, depending on whether quoted prices in active markets are available.

There is no difference between IFRS and MVBS values.

D.1.7 Assets held for index-linked and unit-linked contracts

Assets held for index-linked and unit-linked contracts are defined as assets held for insurance or investment products where the policyholder bears the investment risk. Index-linked and unit-linked assets are measured at fair value. The fair value for assets held for index-linked and unit-linked contracts is mainly determined by market prices.

There is no difference between IFRS and MVBS values, as both IFRS and MVBS measure assets held for index-linked and unit-linked contracts at fair value.

D.1.8 Loans and mortgages

Loans and mortgages are grouped in three categories: "loans and mortgages to individuals", "other loans and mortgages", and "loans on policies". Loans and mortgages are financial assets created when creditors lend funds to debtors, with or without collateral, including cash pools. Loans on policies are loans made to policyholders that are collateralized by policies.

The fair value of loans and mortgages is usually derived based on the income approach using deterministic discounted cash flow models. The relevant discount rates are derived from observable market parameters and reflect the remaining life and the credit risk of the instruments.

The difference between IFRS and MVBS values results from loans and mortgages classified within a hold to collect business model and passing the SPPI test. They are measured at amortized cost under IFRS, while they are measured at their fair value in the MVBS. All other loans and mortgages are measured at their fair value under IFRS and in the MVBS.

D.1.9 Reinsurance recoverables

The valuation basis for reinsurance recoverables is different under IFRS and MVBS. For further details please refer to the section “D.2 Technical Provisions”.

D.1.10 Deposits to cedants

Deposits to cedants include deposits relating to reinsurance accepted. Deposits to cedants are measured at fair value. The fair value is mostly determined using the income approach.

Whereas deposits to cedants are presented separately in MVBS, in IFRS they are included in the technical provisions. There are only minor differences between the IFRS and MVBS values resulting from a different measurement basis.

D.1.11 Insurance and intermediaries receivables

Insurance and intermediaries receivables include amounts due and past due for payment by policyholders, insurers, and others participating in the insurance business that are not included in cash inflows of technical provisions. Receivables from insurance and intermediaries are generally measured at their nominal amount with an adjustment for the probability of default of the counterparty. The nominal value is considered as a good proxy for the fair value within the materiality and proportionality principles.

Therefore, insurance and intermediaries receivables are measured at nominal value with an adjustment for the probability of default of the counterparty in both IFRS and MVBS, unless the market value materially deviates from the adjusted nominal value. In that case, the market value is used in the MVBS.

The difference between IFRS and MVBS mainly relates to the recognition of certain premium cash flows not yet due: While under IFRS they are included in the receivables, in the MVBS they are recognized within technical provisions.

D.1.12 Reinsurance receivables

Reinsurance receivables include amounts due and past due for payment by reinsurers which are linked to the reinsurance business but are not reinsurance recoverables. They might include receivables from reinsurers that relate to settled claims of policyholders or beneficiaries and payments in relation to other than insurance events or settled insurance claims. Reinsurance receivables are generally measured at their nominal amount, with an adjustment for the probability of default of the counterparty. The nominal value is considered as a good proxy for the fair value within the materiality and proportionality principles.

Therefore, reinsurance receivables are measured at nominal value with an adjustment for the probability of default of the counterparty under both IFRS and MVBS, unless the market value deviates materially from the adjusted nominal value. Then, the market value is used in the MVBS.

The difference between IFRS and MVBS mainly relates to amounts being included in the receivables under IFRS, while they are recognized within reinsurance recoverables in the MVBS.

D.1.13 Receivables (trade, not insurance)

Receivables (trade, not insurance) include amounts receivable from employees or various business partners and are not insurance related. They also include amounts receivable from public entities. Receivables (trade, not insurance) are generally measured at their nominal amount with an adjustment for the probability of default of the counterparty.

The nominal value is considered as a good proxy for the fair value within the materiality and proportionality principles.

Therefore, receivables (trade, not insurance) are measured at nominal value with an adjustment for the probability of default of the counterparty under both IFRS and MVBS, unless the market value deviates materially from the adjusted nominal value. In that case, the market value is used in the MVBS.

D.1.14 Own shares (held directly)

Own shares (held directly) are shares of Allianz SE held by Allianz SE or a consolidated subsidiary. These own shares are measured at market price.

Under IFRS, own shares are directly deducted from shareholders' equity, while in the MVBS, own shares are disclosed as an asset. The valuation of own shares in IFRS is based on amortized cost, while own shares in the MVBS are measured at the market price of the listed Allianz SE shares.

D.1.15 Amounts due in respect of Own Funds items or initial funds called up but not yet paid in

This line item generally includes amounts due in respect of the Own Funds items or initial funds called up but not yet paid in. It is measured at nominal value as this is considered to be a good proxy for the fair value within the materiality and proportionality principles.

There is no material difference between IFRS and MVBS.

D.1.16 Cash and cash equivalents

Cash and cash equivalents include notes and coins in circulation that are commonly used to make payments, and deposits exchangeable for currency on demand at par and which are directly usable for making payments by check, draft, giro order, direct debit/credit or other direct payment facility without penalty or restriction. Cash and cash equivalents are measured at nominal amount, if necessary, with an adjustment for probability of default of the counterparty. The

nominal value is considered a good proxy for the fair value within the materiality and proportionality principles.

There is virtually no difference between IFRS and MVBS values.

D.1.17 Any other assets, not elsewhere shown

Any other assets, not elsewhere shown include any assets not included in other balance sheet items. They mainly include deferred charges, but also other assets. They are generally measured at fair value or at nominal value, with an adjustment for the probability of default of the counterparty. The nominal value is considered as a good proxy for the fair value within the materiality and proportionality principles.

Deferred charges are measured at their carrying amount under IFRS, while they are included at fair value in the MVBS. Depending on the nature of the item, other assets are measured at amortized cost or at fair value under IFRS, while they are included at fair value in the MVBS.

D.2 TECHNICAL PROVISIONS

The Allianz Group requires technical provisions for its companies to be calculated according to Articles 76 and 77 of the Directive 2009/138/EC, in order for technical provisions to be disclosed as part of the MVBS.

Technical provisions correspond to the current amount that Allianz would have to pay if it immediately transferred its (re)insurance obligations to another (re)insurance undertaking. Technical provisions are calculated as the sum of best estimate liabilities (BEL) plus a risk margin (RM), which are determined separately.

The matching adjustment to the relevant risk-free interest rate term structure according to Article 77b and the transitional measures on risk-free interest rates referred to in Article 308c of the Directive 2009/138/EC are not applied, whereas the volatility adjustment according to Article 77d of the Directive 2009/138/EC is used. Transitional measures referred to in the respective Article 308d were applied for the first time in 2020. At the request of BaFin, the transitional measures were recalculated in 2024 based on the current interest rate environment. As a result of this recalculation, there is no longer a reduction in technical provisions from transitional measures as of 31 December 2024.

D.2.1 Technical provisions as of 31 December 2024

D.2.1.1 Overview

At the Group level, Allianz defines aggregated Solvency II lines of business (LoB) in line with the structure of the QRT S.02.01.

The following table shows the consolidated technical provisions on an aggregated Solvency II LoB basis for all entities in scope for the Non-Life and Life segments. The table provides technical provisions in scope of Solvency II. Differences in technical provisions between MVBS and IFRS are provided in the section "D.2.1.3 Valuation differences between IFRS and MVBS".

Table 26: Consolidated MVBS technical provisions by aggregated Solvency II LoB

32. Other life insurance	11,668,013	535,419	12,203,432
34. Annuities stemming from Non-Life insurance contracts and relating to insurance obligations other than Health insurance obligations	1,302,011	62,197	1,364,207
36. Life reinsurance	6,262,631	241,841	6,504,472
Technical provisions – Life (excluding Health, index-linked and unit-linked)	344,733,199	4,097,620	348,830,819
31. Index-linked and unit-linked insurance	151,102,101	1,859,115	152,961,216
Technical provisions – index-linked and unit-linked	151,102,101	1,859,115	152,961,216
Technical provisions – Life	529,795,987	8,348,884	538,144,870
Total	601,840,276	11,814,989	613,655,265

In the Non-Life segment, the largest contributions to total technical provisions come from Allianz France, Allianz Germany, Allianz Italy, AGCS, and Allianz Re. In the Life segment, the LoB with the largest share of technical provisions is insurance with profit participation. The main contributors are Allianz Germany, Allianz France, and Allianz Italy.

As already mentioned, there is no longer a reduction in technical provisions from transitional measures as of 31 December 2024.

Changes in technical provisions compared to previous year

Changes in technical provisions, net of reinsurance recoverables, compared to the previous year, result from currency movements, the writing of new business, unwinding of in-force business, changes in economic assumptions, and non-economic and other changes. The line item “Acquired/divested business and change in scope” contains acquisitions or divestments, provided the business in question is in scope for MVBS reporting, as well as changes in the scope of MVBS reporting for existing business.

The following tables show the movements of technical provisions compared to the previous year, separated by Non-Life and Life aggregated Solvency II LoB.

Table 30: Non-Life consolidated MVBS (net of reinsurance) technical provision movements compared to previous year

€ thou

	Technical provisions, net of reinsurance
Opening balance reported as of 31 December 2023	73,438,174
Foreign exchange variance	302,321
Acquired/divested business and change in scope	(1,331,100)
Adjusted opening balance as of 31 December 2023	72,409,395
New business ¹	23,199,517
Unwinding of in-force (discounting & cash flow) ¹	(21,037,449)
Economic assumption changes	444,987
Non-economic changes	(780,334)
Other changes (including changes in premium provisions and risk margin)	1,274,278
Closing balance as of 31 December 2024	75,510,395

1_ Excluding risk margin.

Table 31: Life consolidated MVBS (net of reinsurance) technical provision movements compared to previous year

€ thou

	Technical provisions, net of reinsurance
Opening balance reported as of 31 December 2023	498,733,809
Foreign exchange variance	176,541
Acquired/divested business and change in scope	(129,723)
Adjusted opening balance as of 31 December 2023	498,780,628
New business	31,172,607
Unwinding of in-force (discounting & cash flow)	(5,276,955)
Economic assumption changes	993,180
Non-economic changes	(2,287,062)
Other changes (including changes in risk margin)	14,762,473
Closing balance as of 31 December 2024	538,144,870

The movement in “acquired/divested business and change in scope” for Non-Life technical provisions mainly reflects the reinsurance transaction with Arch at AGCS, partly offset by the acquisition of Tua Assicurazioni in Allianz Italy. The line item “other changes” for Life technical provisions mainly reflects the increase in technical provisions due to the recalculation of transitional measures of € 14,729,062 thou.

D.2.1.2 Valuation differences between IFRS and MVBS

The Allianz Group applies IFRS for insurance contracts.

Although the definitions of “best estimate” provided under IFRS and Solvency II are not identical, the theoretical concepts and calculation methods applied in the estimation process are the same, as is the judgment used in model selection and calibration. Consequently, under both regimes there is only one “company’s best estimate” for all LoB, which takes into account quantitative as well as qualitative information.

The following table sets out the differences between IFRS and MVBS values:

Table 32: Valuation differences of technical provisions (scope and valuation)

€ thou

As of 31 December 2024	IFRS re-mapped to MVBS line items	Adjustment for scope ¹	IFRS adjusted for MVBS scope ¹	Valuation difference	MVBS
Technical provisions calculated as a whole	-	-	-	-	-
Best estimate ²	92,090,564	(1,094,443)	90,996,120	(10,272,702)	80,723,418

1_IFRS data adjusted for scope of MVBS-delivering entities.

2_Before impact of transitional measures.

The main differences between IFRS and MVBS values result from the following drivers:

- **Contract boundaries:** The definition of contract boundaries differs between Solvency II and IFRS.
- **Risk-free interest rates:** Distinct Solvency II and IFRS risk-free interest rate curves may arise from differences between the last liquid point or the ultimate forward rate.
- **Volatility adjustment:** Under Solvency II, a volatility adjustment is used. Under IFRS, there is no corresponding deduction, but an

illiquidity adjustment is used instead of the volatility adjustment. This fulfills a similar role but is calculated on company-individual data.

- **Risk margin:** The Allianz Group applies a similar methodology for the calculation of the risk adjustment as is used for the risk margin, with differences in the scope of risks and diversification effects included in the calculation and an additional lambda parameter in the risk adjustment that is currently still under discussion for the risk margin.

- **Mapping differences:** In some cases, the mapping to aggregated Solvency II LoBs is different under IFRS and MVBS.
- **Unearned business:** Under the premium allocation approach, profit related to unearned exposure is deferred, and the reserves for unearned exposure are undiscounted.

The table below shows the reconciliation between IFRS and MVBS of reinsurance recoverables at the Group level:

Table 33: Reinsurance recoverables according to IFRS and MVBS

€ thou

As of 31 December 2024	IFRS re-mapped to MVBS line items	Adjustment for scope ¹	IFRS adjusted for MVBS scope ¹	Valuation difference	MVBS
Non-Life (excluding Health)	14,367,842	(35,002)	14,332,840	(905,709)	13,427,130
Health (similar to Non-Life)	785,468	(77)	785,391	(165,562)	619,829
Technical provisions – Non-Life	15,153,310	(35,079)	15,118,230	(1,071,271)	14,046,959

Total	29,656,953	(14,033,013)	15,623,940	3,507,103	19,131,043

¹ IFRS data adjusted for scope of MVBS-delivering entities.

D.2.2 Calculation of technical provisions

D.2.2.1 General principles

Proportionality

The Actuarial function ensures that technical provisions are determined appropriately, using data, assumptions, and methods proportionate to the risk profile of the legal entity, taking into account the nature, scale, and complexity of the risks in question.

Materiality

The concept of materiality is an essential element in the calculation of technical provisions. It is reflected in the Allianz Group's materiality concept for technical provisions, which applies to the scope, valuation method, assumptions, and data quality. The materiality concept is

used in model governance to ensure that actuarial models are appropriate for the calculation of technical provisions.

Expert judgment

In line with the above, the valuation of technical provisions for all LoB is a process that requires expert judgment in a number of areas – for example, regarding the credibility assigned to historical data, the extent to which prospective models can be relied upon, and the appropriate extent to which uncertainty must be considered in an estimation. Regardless of the technique, judgment is required in making additions or adjustments to estimates in order to allow for circumstances hitherto not included and which need to be incorporated in the BEL – for example, binary events. Hence, expert judgment cannot be regarded separately from all other tasks performed by the Actuarial function. Rather, its role is to complement the statistical analysis performed, interpret the results obtained, and identify a solution in the event of any shortcomings.

As part of the analysis, the Actuarial function substantiates the appropriateness of the expert judgment, in order to avoid biased estimates that over- or underestimate the true underlying risk. That said, expert judgment is not applied in isolation unless there is no reliable alternative, for example because there is a lack of relevant data. Where an assumption depends on expert judgment, it is expressed by person(s) with relevant knowledge and a comprehensive understanding of the subject.

The internal governance framework, which is set up by the Group, requires documentation on the expert judgment applied. The selection of the level and scope of documentation considers proportionality and materiality based on quantitative and qualitative indicators.

D.2.2.2 Best estimate liabilities

BEL represent the probability-weighted average of the future cash flows expected for the term of the policy, taking into account the time value of money (expected value of future cash flows) and using the

relevant risk-free interest rate term structure. This is required by the European Insurance and Pensions Authority, EIOPA.

For all existing businesses, the BEL are calculated at the valuation date. Their calculation is based on up-to-date and credible information as well as best-estimate assumptions, and performed using adequate, applicable, and relevant actuarial and statistical methods.

The cash-flow projection used in the calculation takes account of all cash inflows and outflows required to settle the insurance and reinsurance obligations over their lifetimes, including:

- future benefits (claims, maturity values, annuity payments, surrender values),
- future expenses (maintenance, servicing, overheads, commission, investment management), and
- future premiums.

The BEL for Non-Life and Health (similar to Non-Life) insurance obligations comprise claims and premium provisions and are calculated separately. Claims provisions comprise best estimates of claims reserves, including salvage and subrogation, as well as loss adjustment expenses. Best estimates of premium provisions are defined as the expected present value of future in- and outgoing cash flows, including future premium payments, future claims, and future expenses.

D.2.2.3 Reinsurance recoverables and special purpose vehicles

EIOPA guidelines stipulate that recoverables from reinsurance contracts or special purpose vehicles (SPVs) take account of expected losses due to counterparty default. This amount is called Counterparty Default Adjustment (CDA). There are no recoverables from special purpose vehicles.

The Allianz Group considers the risk mitigation effect of reinsurance in its calculations, even though the risk of counterparty default remains. The latter is considered separately and reinsurance recoverables are adjusted accordingly. Based on former calculations, the CDA at the Group level is immaterial compared to the amount of reserves ceded.

Claims provision analysis is performed separately for technical provisions, gross and net of reinsurance. This direct approach depends on the availability of appropriate ceded data.

However, simplification is possible to allow net analysis, which can be performed in the following ways:

- An indirect approach analyzes the difference between gross and net estimates. This approach is possible where appropriate net data is available.
- An even simpler approach looks at gross-to-net ratios. In this case, benchmark ratios are used.
- The third approach is to consider only case reserves for the ceded best estimates.

In case simplifications are used, the Actuarial function demonstrates and validates the appropriateness of the approach.

D.2.2.4 Risk margin

Solvency II requires an allowance for the cost of holding non-hedgeable risk capital. No risk margin is required for hedgeable financial risks, as these can be transferred to the capital markets.

The risk margin is required for non-hedgeable risks – the financial other than interest rate risk, insurance and operational risks that cannot be covered using capital market instruments.

The cost of capital reflects the return investors require from an insurer to provide the required regulatory capital. In line with Solvency II, the risk margin is calculated with a 6% cost of capital rate (CoC) after tax, and 100% capitalization of risk capital in line with Solvency II requirements.

Simplifications are always applied carefully when calculating the risk margin. The appropriateness of simplifications including underlying assumptions is analyzed, justified, and documented.

D.2.2.5 Methods and assumptions used for valuation

Specific to the LoB and the business context, the calculation of technical provisions is performed using an appropriate valuation method. This is crucial, as only an appropriate valuation method ensures that the nature and complexity of insurance risks are adequately addressed, and the limitations of the method are known. The choice between Life and Non-Life actuarial methodologies depends on the nature of the liabilities being valued and on the identification of risks that materially affect the underlying cash flows. In selecting the appropriate method, we consider, among other factors, the quality, quantity, and reliability of the available data and analyze all important characteristics of the business. The method is

designed to ensure that the assumptions and parameters used in the method, in particular assumptions on interest rates, expenses and claims development, are clear and explicit; key influencing factors are identified.

There is some inherent uncertainty in the calculation of technical provisions. Key drivers and uncertainties associated with the BEL are analyzed and documented. This is done, above all, by performing stress and scenario testing, back-testing, and movement analyses to assess whether the inherent uncertainties of the underlying assumptions can be managed. For example, sensitivity analysis on interest rate curves, asset values, and actuarial assumptions is performed. This is required as the estimates for technical provisions are either based on current market data and historical observations or on expert judgment, whereas the ultimate liability is subject to the outcome of events (e.g., dependent on jurisdiction) yet to occur. The level of sensitivity of a model is analyzed and tested to gain an understanding of the volatility of the underlying business. Sensitivity testing of a model is not limited to stochastic simulations but also considers model uncertainty, which includes scenario testing, considering a range of results from different models, as well as back-testing to monitor the change in estimates due to additional information. In addition, the uncertainty of technical provisions with respect to the non-market risks is evaluated in the respective risk capital and shown in the section “C.1 Underwriting Risk”.

Simplifications are only used if they will not have a material impact. Materiality is assessed using the defined materiality concept.

Economic assumptions

According to EIOPA guidelines, risk-free discount rates are used to discount future best-estimate cash flows. Wherever possible, the reference rate is the swap yield curve appropriate to the currency of the cash flows plus a volatility adjustment where applicable. In exceptional circumstances – i.e., if the swap market is not sufficiently deep or liquid and only government bond prices can be considered to fulfill liquid-market dynamics – the risk-free rates are based on government rates.

For the Life segment, Allianz uses a market-consistent valuation methodology based on risk-neutral economic models to derive the economic value of liabilities. In order to project future cash flows for the technical provisions, assumptions have to be made on the asset performance of the company. This requires consideration of the development of the capital market, together with assumptions on the

company's investment strategy, as well as the current asset portfolio and allocation.

Inflation is considered for the valuation of technical provisions, and the risk arising from changing inflation rates is subject to regular monitoring.

Transitional measures on technical provisions

Insurance and reinsurance undertakings may, subject to prior approval by their supervisory authority, apply transitional measures on technical provisions in accordance with Article 308d of the Directive 2009/138/EC. Transitional measures on technical provisions are based on the difference between the Solvency II technical provisions and the value of the liabilities based on previous regulations. The maximum portion deductible shall decrease linearly at the end of each year from 100% during the year starting from 1 January 2016 to 0% on 1 January 2032.

In the second quarter of 2020, Allianz was granted approval for the application of transitionals on technical provisions for Allianz Lebensversicherungs-AG and Allianz Private Krankenversicherungs-AG. These transitional measures reduced the technical provisions as of 31 December 2023 by € 14,733,366 thou.

At the request of BaFin, the transitional measures were recalculated in 2024 based on the current interest rate environment. As a result of this recalculation, there is no longer a reduction in technical provisions from transitional measures as of 31 December 2024.

The application of transitional measures for technical provisions has no impact on the Solvency II capitalization ratio as of 31 December 2024. In contrast, for 31 December 2023, an application of transitional measures for technical provisions raised the Solvency II capitalization ratio from 206% to 229%.

Volatility adjustment

EIOPA permits applying a volatility adjustment for the unintended consequences of short-term volatility of capital requirements. The volatility adjustment is a function of the market yield spread from a weighted average portfolio of sovereign and corporate bonds over risk-free rate. It is based on a reference portfolio per currency and per country. The risk-adjusted currency spread is applied as an adjustment to the discount rate. An additional adjustment is added to the discount rate, if the risk-adjusted country spread is significantly higher than the risk-adjusted currency spread.

For the Life and the Non-Life businesses, the volatility adjustment was used for legal entities where the local regulator approved the application. The impact on the amount of Non-Life technical provisions as at year-end 2024 was a reduction of € 652,472 thou.

The impact on the amount of Life technical provisions as at year-end 2024 was a reduction of € 1,598,782 thou.

A change in the volatility adjustment to zero would have increased the Allianz Group's Solvency II Capital Requirement by € 3,600,275 thou to € 48,303,649 thou, and its eligible Own Funds by € 1,543,305 thou to € 94,755,490 thou. A change in the volatility adjustment to zero would have increased technical provisions (net of reinsurance) and surplus funds, resulting in a negative impact on the MVBs excess of assets over liabilities of € 1,429,299 thou (net of tax). However, higher Group SCR and consequently higher Solo SCR contributions to the Group SCR would have reduced the deduction for unavailable Solo Own Funds at the Group level by € 2,972,604 thou. This was predominantly driven by Allianz Lebensversicherungs-AG. The SCR figures include impacts due to static and dynamic volatility adjustment (see section "E.4.2 Methodology underlying the internal model" for a description of the dynamic volatility adjustment methodology).

Therefore, the Allianz Group's Solvency II capitalization ratio without considering the volatility adjustment would have amounted to 196%.

Non-economic assumptions

Non-economic assumptions such as mortality, morbidity, lapse rates, and expenses are determined by the respective business units, based on their best estimates as at the valuation date. Best-estimate assumptions are set by considering past, current and expected future experience.

For Life business, future expected changes are taken into account in best-estimate assumptions only when sufficient evidence exists and the changes are reasonably certain. The crediting assumption considers future bonus rates reflecting either the management's bonus philosophy, where bonuses are discretionary, or the policy conditions if the bonus policy is specified there. This is consistent with the future assumptions set for investment returns and any distribution of unallocated accrued surplus.

D.2.2.6 Group and legal entity responsibilities

Although the Group defines the framework and sets the guidelines for the calculation of technical provisions, the valuation and analysis are performed locally at the individual legal entities. The Group Actuarial function provides guidance and criteria to judge whether the chosen methodology is adequate and proportionate to the nature, scale, and complexity of the risks. In addition, the Group Actuarial function reviews and challenges the technical provisions calculated by the related undertakings in the quarterly closing process.

The analysis is structured such that the respective Actuarial function can provide an opinion on 100% of the technical reserves.

For the Group, the aggregated technical provisions from local entities are not modified further.

D.3 OTHER LIABILITIES

The classes of other liabilities described are the same as those used in the MVBS. The aggregation is based on the nature and function of the liabilities and their materiality for solvency purposes. Unless stated otherwise, only valuation differences between “IFRS adjusted for MVBS scope” and “MVBS” values are discussed in this section.

D.3.1 Contingent liabilities

Liabilities that are both contingent and material have to be recognized in the MVBS. Contingent liabilities are measured at the expected present value of future cash flows required to settle the contingent liability over the lifetime of that contingent liability, using the basic risk-free interest rate term structure. Under IFRS, contingent liabilities are not recognized in the balance sheet but disclosed in the notes to the consolidated financial statements, using a best estimate, according to IAS 37.

The contingent liability recognized results from a possible additional tax payment.

If the maturity of guarantees is uncertain or the amount of expected capital payments is not material, the recognized contingent liabilities are not discounted with the basic risk-free interest rate term structure.

D.3.2 Provisions other than technical provisions

Provisions other than technical provisions refer to liabilities of uncertain timing and amount, excluding those reported under “Pension benefit obligations”. Provisions other than technical provisions are recognized as liabilities (assuming a reliable estimate can be made) when they are present obligations resulting from past events and it is probable that an outflow of resources comprising economic benefits will be required to settle the obligations. These include e.g., staff-related provisions, provisions for stock-based compensation, restructuring provisions, and provisions for legal expenses.

The provisions are valued according to IAS 37 and IFRS 2, which is in line with the valuation required under Solvency II. IAS 37 requires using a best estimate for the said provisions. Therefore, there are no material differences between IFRS and MVBS values.

D.3.3 Pension benefit obligations

Pension benefit obligations include the total net obligations related to the employee pension schemes (where applicable in accordance with the national pension schemes). Post-employment benefits refer to employee benefits other than termination benefits payable after completion of employment. Post-employment benefits are classified as either defined contribution or defined benefit plans. Pension benefit obligations are measured in accordance with IAS 19, as the Allianz Group considers the valuation method according to IAS 19 to be the most appropriate valuation under Solvency II.

The plans may vary from country to country due to the different legal, fiscal, and economic environments.

Risks typically associated with defined benefit plans are biometric risks such as longevity, disability, and death, as well as economic risks such as interest rates, inflation, and compensation increases. New plans are primarily based on contributions and may include, in some cases, guarantees such as the preservation of contributions or minimum interest rates.

D.3.3.1 Overview

Each of the pension plans in Germany, the U.K., and Switzerland contributes more than 5% to the Allianz Group’s defined benefit obligation or its plan assets. As the Allianz Retirement and Death Benefits Fund in the U.K. closed from 1 July 2015 to future accrual and the plans in Switzerland are nearly negligible from a risk perspective, except a minor liquidity risk due to the “Freizügigkeitsleistung”, only the defined benefit plans in Germany are described in more detail regarding key risks and regulatory environment.

Most active German employees participate in contribution-based plans using different vehicles to cover the base salary both below and above the German social security ceiling (GSSC). Since 1 January 2015, the Allianz Group contributes for new entrants and for

the majority of contribution-based pension plan beneficiaries to the low-risk pension plan “My Allianz Pension”, where only contributions are preserved. For salaries above the GSSC, the Allianz Group decides each year whether and to which extent a budget for the contribution-based pension plans is provided. Independently of this decision, an additional risk premium is paid to cover death and disability. Generally the accruals of the contribution-based pension plans are wholly funded, whereas the grandfathered plans are funded to a minor extent. On retirement, the accumulated capital is paid as a lump sum or converted to a lifetime annuity.

Employees who joined Allianz before 1 January 2015 participate in the Allianz Versorgungskasse VVaG (AVK), financed through employee contributions, and the Allianz Pensionsverein e.V. (APV), which is financed by the employer. Both pension funds provide pension benefits for the base salary up to the GSSC, are wholly funded along local regulatory requirements, and were closed to new entrants, effective 31 December 2014. AVK and APV are legally separate administered pension funds with trustee boards being responsible for the investment of the assets and the risk management. AVK is subject to German insurance regulation. The assets of the contribution-based pension plans are allocated to a trust (Methusalem Trust e.V.) and managed by a board of trustees. For the AVK, the annual minimum interest rate guaranteed is 1.75% – 3.50%, depending on the date of joining the Allianz Group, and for the closed part of the contribution-based pension plan it is 2.75%.

There is also a partly funded defined benefit pension plan for agents (“VertreterVersorgungsWerk, VVW”), which has been closed for new entrants since 31 December 2011. A part of the pension plan serves as a replacement for the compensatory claim of agents according to German Commercial Code (§89b). VVW is similar to a final salary benefit plan.

Pension increases apart from AVK and APV are guaranteed at 1% p.a. at a minimum. Depending on legal requirements, some pension increases are linked to inflation. In AVK, the complete surplus share of the retirees is used to increase their pension.

The period in which a retirement benefit can be drawn is usually between the ages of 60 and 67. Disability benefits are granted until retirement pension is paid. In the case of death under the previous plans, surviving dependents normally receive 60% (widow/widower)

and 20% (per child) of the original employee's pension, in total not to exceed 100%. Under the "My Allianz Pension" plan, the surviving dependents receive the capital accrued.

Additionally, the Allianz Group offers a deferred compensation program, "Pensionszusage durch Entgeltumwandlung (PZE)", for

active employees. Within some boundaries they convert at their discretion parts of their gross income and, in exchange, receive a pension commitment of equal value. PZE is qualified as a defined benefit plan with small risk exposure.

D.3.3.2 Defined benefit plans

The following table sets out the changes in the defined benefit obligation, in the fair value of plan assets, in the effect of the asset ceiling as well as in the net defined benefit balance for the various Allianz Group defined benefit plans:

Table 34: Changes in defined benefit plans

€ thou

	Defined benefit obligation	Fair value of plan assets	Effect of asset ceiling ¹	Net defined benefit balance
	I	II	III	(I-II+III)
Balance as of 1 January 2024	22,575,984	14,444,842	110,451	8,241,593
Current service costs	375,787	-	-	375,787

Balance as of 31 December 2024³	22,303,496	14,590,512	113,008	7,825,992
thereof assets				(422,634)
thereof liabilities				8,248,624
Thereof allotted to:				
Germany	18,682,845	10,949,741	-	7,733,104
United Kingdom	1,032,183	1,034,953	-	(2,770)
Switzerland	1,678,284	2,015,872	111,607	(225,981)

1_ The asset ceiling is determined by taking into account the reduction of future contributions.

2_ Includes for 2024 € 246 mn for a buy-out in France.

3_ As of 31 December 2024, € 5,241 mn of the defined benefit obligation is wholly unfunded, while € 17,063 mn is wholly or partly funded.

As of 31 December 2024, post-retirement health benefits were immaterial.

Based on the estimated future cash flows of € 1,012,681 thou for 2025, € 1,043,058 thou for 2026, € 1,093,999 thou for 2027, € 1,120,100 thou for 2028, € 1,134,509 thou for 2029, and € 5,508,308 thou for 2030 – 2034, the weighted duration of the defined benefit obligation is 14.3 years. Based on the liability profiles of the defined benefit obligation and on the regulatory funding requirements, the Allianz Group uses stochastic asset liability models to optimize the asset allocation from a risk-return perspective.

Due to a well-diversified portfolio of approximately 133,000 plan participants, no reasonable uncertainty is expected with regard to future cash flows that could affect the liquidity of the Allianz Group. The following chart shows the asset allocation:

Table 35: Asset allocation of plan assets

As of 31 December 2024	€ thou	%
Equity securities		
Quoted	1,620,348	11.1
Non-quoted	61,783	0.4
Debt securities		
Quoted	3,390,238	23.2
Non-quoted	1,299,991	8.9
Real estate¹	763,352	5.2
Annuity contracts^{1,2}	5,689,913	39.0
Life insurance investment products¹	1,518,085	10.4
Other³	246,802	1.7
Total	14,590,512	100.0

1_Real estate, annuity contracts, and life insurance investment products are generally non-quoted.

2_As of 31 December 2024, includes € 1,015 mn in the United Kingdom due to buy-ins.

3_As of 31 December 2024, includes € (13) mn in the United Kingdom due to gilt repurchase agreements within the Fund's gilt portfolios. The loan leg of this structure, which is used to hedge the interest rate and inflation risk of the Fund's liabilities efficiently, is treated as a negative cash balance.

The bulk of the plan assets are held by Allianz Versorgungskasse VVaG, Munich, which is not part of the Allianz Group. Plan assets do not include any real estate used by the Allianz Group, and include only € 4,356 thou of its own transferable financial instruments.

In addition to the plan assets of € 14,590,512 thou, the Allianz Group has dedicated assets at the Group level amounting to € 8.9 bn as of 31 December 2024, which are likewise managed according to Allianz ALM standards.

The assumptions for the actuarial computation of the defined benefit obligation and the recognized expenses depend on the circumstances in the country where the plan has been established.

The calculations are based on current actuarially calculated mortality tables, projected turnover depending on age and length of service, and internal Allianz Group retirement projections. Although this represents the best estimate as of today, considering a further increase in life expectancy could be reasonable. The weighted average life expectancy of a currently 65-year-old female plan participant is about 89.3 years, and of a currently 65-year-old male plan participant about 87.4 years. An increase in life expectancy by one year would lead to an increase of the defined benefit obligation by € 547,070 thou.

The weighted average values of the assumptions for the Allianz Group's defined benefit plans used to determine the defined benefit obligation and the recognized expenses are as follows:

Table 36: Assumptions for defined benefit plans

%	
As of 31 December 2024	
Discount rate	3.3
This includes the following country rates:	
Germany	
long duration	3.4
short duration	3.3
United Kingdom	5.5
Switzerland	1.0
Rate of compensation increase	1.9
Rate of pension increase	1.8
Rate of medical cost trend	5.6

The recognized expenses are recorded based on the assumptions of the corresponding previous year.

The discount rate assumption is the most significant risk for the defined benefit obligation. It reflects market yields at the balance sheet date of high-quality fixed-income investments corresponding to the currency and duration of the liabilities. In the eurozone, the decision for the discount rate is based on AA-rated financial and corporate bonds, and a standardized cash flow profile for a mixed population.

The range for the sensitivity calculations was derived by analyzing the average volatility over a five-year period.

An increase in the discount rate by 50 basis points would lead to a decrease of € 1,018,258 thou in the defined benefit obligation, whereas a decrease in the discount rate by 50 basis points would lead to an increase of € 1,138,805 thou.

An increase of pre-retirement benefit assumptions (e.g., a salary increase) of 25 basis points would have an effect of € 39,930 thou on the defined benefit obligation. However, the increase of post-retirement assumptions (e.g., inflation-linked increases of pension payments) of 25 basis points would increase the defined benefit obligation by € 353,492 thou.

There are no differences between IFRS and MVBS values.

D.3.3.3 Defined contribution plans

During the year ended 31 December 2024, the Allianz Group recognized expenses for defined contribution plans of € 312,612 thou. Additionally, the Allianz Group paid contributions for state pension schemes of € 429,574 thou.

D.3.4 Deposits from reinsurers

Deposits from reinsurers include amounts received from a reinsurer (e.g., cash) or deducted by the reinsurer according to the reinsurance contract. Deposits from reinsurers are measured at fair value without taking account of subsequent changes to own credit standing. The fair value is mainly determined by using the income approach.

Whereas deposits from reinsurers are presented separately in MVBS, in IFRS they are included in the reinsurance recoverables. There are only minor differences between the IFRS and MVBS values resulting from a different measurement basis.

D.3.5 Deferred tax liabilities

Deferred tax liabilities are the amounts of income tax payable in future periods with respect to taxable temporary differences.

For information on the criteria for recognition and valuation of deferred tax liabilities, please refer to the section "D.1.3 Deferred tax assets".

The total amount of deferred tax liabilities after offsetting with deferred tax assets recognized in the MVBS of € 10,921,656 thou

related to temporary differences between the tax base and the respective value in the MVBS, which concern mid- to long-term balance sheet items.

D.3.6 Derivatives

Derivatives are financial instruments whose values are based on the price movements of the underlying assets to which they are linked, settled at a future date and require no initial net investment or an initial net investment that is smaller than would be required for other types of contracts that would be expected to have a similar response to changes in market factors.

Derivatives are measured at fair value according to IFRS 9, for both IFRS and MVBS reporting, and their fair value is determined in accordance with IFRS 13. The fair value of the derivatives is usually determined using the income approach. Valuation techniques applied for the income approach mainly include discounted cash flow models as well as the Black-Scholes-Merton model. The main observable input parameters include volatilities, yield curves observable at commonly quoted intervals, and credit spreads observable in the market.

There is no difference between IFRS and MVBS values. Derivatives with negative values are reported on the liability side without taking into account adjustments for own credit standing.

D.3.7 Debts owed to credit institutions

Debts owed to credit institutions refer to debt, such as mortgages and loans, toward credit institutions (banks etc.). Bonds held by credit institutions are excluded, as it is not possible for the entity to identify all the holders of the bonds it has issued. Subordinated liabilities are also excluded. All financial liabilities as defined in IFRS 9 are measured at fair value in the MVBS without taking into account adjustments for own credit standing.

Fair value is based on market prices, if available. For other liabilities to banks, fair value is derived mainly based on an income approach using future cash flows discounted with risk-specific interest rates. The main non-market-observable inputs include credit spreads. In some cases, the carrying amount is considered to be a reasonable estimate of the fair value.

According to IFRS, debts owed to credit institutions are generally measured at amortized cost using the effective interest method, unless they are designated as “at fair value through profit or loss”.

The difference between IFRS and MVBS results from the different approaches used: generally measurement at amortized cost under IFRS; and measurement at fair value without taking into account adjustments for own credit standing in the MVBS. For the calculation of the credit spreads used for the valuation of financial liabilities, please refer to the section “D.5.1 Calculation of the credit spreads used for the valuation of financial liabilities”.

D.3.8 Financial liabilities other than debts owed to credit institutions

Financial liabilities other than debts owed to credit institutions include certificated liabilities and liabilities from cash pooling, as well as other liabilities to customers. In the MVBS, all financial liabilities as defined in IFRS 9 are valued at fair value without taking into account adjustments for own credit standing. The fair value is usually determined through the market approach, using quoted market prices, and through the income approach, using future cash flows discounted with risk-specific interest rates. In some cases, the carrying amount is considered to be a reasonable estimate of the fair value.

According to IFRS, financial liabilities other than debts owed to credit institutions are generally measured at amortized cost using the effective interest method, unless they are designated as “at fair value through profit or loss”.

The difference between IFRS and MVBS results from the different approaches used: generally measurement at amortized cost under IFRS and measurement at fair value without taking into account adjustments for own credit standing in the MVBS. For the calculation of the credit spreads used for the valuation of financial liabilities, please refer to the section “D.5.1 Calculation of the credit spreads used for the valuation of financial liabilities”.

D.3.9 Insurance and intermediaries payables

Insurance and intermediaries payables refer to amounts due and past due for payment to policyholders, insurers, and others participating in the insurance business, but are not technical provisions. They include amounts due and past due to (re)insurance intermediaries (e.g., commissions due to intermediaries but not yet paid by the Group) and exclude loans and mortgages due to insurance companies, if they are not linked to insurance business but only related to financing (and are, therefore, included in financial liabilities).

Payables are generally recognized at the amounts actually due on repayment (i.e., their settlement amount). Due to their short-term nature, the IFRS value is considered to be a good proxy of the market value and no adjustment is generally necessary for Solvency II. However, there may be instances where the IFRS value differs from the market value. The nominal value is considered to be a good proxy for the fair value within the materiality and proportionality principles.

Insurance and intermediaries payables are measured at nominal value under IFRS and MVBS, unless the market value deviates materially from the nominal value. In that case, the market value is used in the MVBS.

The difference mainly relates to the recognition of certain premiums that are included in payables under IFRS, while they are recognized within technical provisions in the MVBS.

D.3.10 Reinsurance payables

Reinsurance payables are amounts payable and due or past due to reinsurers (especially current accounts), other than deposits that are linked to the reinsurance business, but not included in reinsurance recoverables. They include payables to reinsurers that relate to ceded premiums.

Payables are generally recognized at the amounts actually due on repayment (i.e., their settlement amount). Due to their short-term nature, the IFRS value is considered to be market value and no adjustment is generally necessary for Solvency II. However, there may be instances where the IFRS value differs from the market value. The nominal value is considered a good proxy for the fair value within the materiality and proportionality principles.

Reinsurance payables are measured at nominal value under IFRS and MVBS, unless the market value deviates materially from the nominal value. Should that be the case, the market value is used in the MVBS.

The difference mainly relates to the recognition of certain premiums that are already included in payables under IFRS, while they are recognized within reinsurance recoverables in the MVBS.

D.3.11 Payables (trade, not insurance)

Payables (trade, not insurance) include the total amount of trade payables, including amounts due to employees, suppliers, etc., and are not insurance related. They also include amounts owed to public entities. Under IFRS, payables are generally recognized with their settlement amount, which is also considered to be the market value.

There is no material difference between IFRS and MVBS values.

D.3.12 Subordinated liabilities

Subordinated liabilities are debts that rank after other debts when the entity is liquidated. Subordinated liabilities are measured at fair value in the MVBS without taking into account subsequent changes to own credit standing.

The fair value is primarily determined based on the market approach using quoted market prices and on the income approach using deterministic discounted cash-flow models.

The difference between IFRS and MVBS relates to the measurement generally at amortized cost under IFRS and the measurement at fair value without taking into account adjustments for own credit standing in the MVBS. Additionally, the issued undated subordinated bonds that are classified as shareholders' equity under IFRS are considered as subordinated liabilities for MVBS purposes.

D.3.13 Any other liabilities, not elsewhere shown

Any other liabilities, not elsewhere shown include liabilities not included in other balance sheet items – such as liabilities from puttable equity instruments, but also other liabilities and deferred income. These are generally measured at fair value or at nominal value. The nominal value is considered to be a good proxy for the fair value within the materiality and proportionality principles.

Any other liabilities, not elsewhere shown that are not measured at fair value are measured at amortized cost under IFRS, while they are included at fair value in the MVBS.

D.3.14 Leasing

D.3.14.1 General description, recognition and valuation

There is generally no valuation difference for other leasing assets and the finance lease obligation between MVBS and IFRS. The usual leasing assets – property, plant and equipment or lease receivables – are included in the respective balance sheet line items. Please refer to the respective valuation sections for those assets.

The Allianz Group has elected not to recognize right-of-use assets and lease liabilities for short-term leases and leases of low-value assets. Furthermore, the Allianz Group does not recognize right-of-use assets and lease liabilities for car leases. The expenses relating to these leasing contracts are expensed on a straight-line basis over the lease term.

Allianz Group as lessee

Under IFRS 16, the Allianz Group recognizes right-of-use assets and lease liabilities for most leases.

The carrying values of the right-of-use assets, recognized by the lessee under IFRS 16, are considered to be a proxy of the fair value for Solvency II purposes. The IFRS 16 value, which is the present value of the lease payments, is considered equivalent to the valuation for Solvency II purposes.

The Allianz Group as lessor – finance lease

Assets held under a finance lease are recognized in the IFRS and Solvency II balance sheets as a lease receivable in the amount of the net investment in the lease:

Minimum lease payments (sum of all lease payments and guaranteed residual value)
 + unguaranteed residual value
 = gross investment in the lease
 discounted at interest rate implicit in lease
 = net investment in the lease
 + initial direct costs
 = amount recognized as an asset

Please refer to the section "D.1.8 Loans and mortgages" for additional information on the valuation of these assets for Solvency purposes.

The Allianz Group as lessor – operating lease

Assets held under an operating lease are recognized in the IFRS and Solvency II balance sheets depending on their nature. Leasing assets are therefore presented in the lines "Intangible assets" and "Property, plant and equipment held for own use". Please also refer to the respective sections for additional information on the valuation of these assets for Solvency purposes.

D.3.14.2 Leasing arrangements

The Allianz Group as a lessee

The Allianz Group occupies property in many locations under various long-term leases and has entered into various leases covering the long-term use of data processing equipment and other office equipment.

As of 31 December 2024, the maturities for lease liabilities were as follows:

Table 37: Maturities for the lease liabilities

€ thou

	Future minimum lease payments	Interest	Present value of minimum lease payments
As of 31 December 2024			
Less than one year	511,817	48,988	462,828
Between one and five years	1,277,868	138,771	1,139,097
More than five years	1,136,583	146,423	990,160
Total	2,926,268	334,183	2,592,085

For the year ended 31 December 2024, the total cash outflow for leases amounted to € 530,596 thou.

The Allianz Group as a lessor

For the year ended 31 December 2024, the lease income for operating leases amounted to € 1,343,416 thou.

The Allianz Group leases out its investment properties under operating leases because they do not substantially transfer all of the risks and rewards incidental to the ownership of the assets. Investment property comprises a number of commercial properties that are leased to third parties.

As of 31 December 2024, the maturities for the future minimum lease payments of operating leases were as follows:

Table 38: Operating leases – maturities for the future minimum lease payments

€ thou

As of 31 December 2024	
One year and less	916,869
Between 1 and up to 2 years	820,858
Between 2 and up to 3 years	757,651
Between 3 and up to 4 years	666,725
Between 4 and up to 5 years	587,659
More than 5 years	2,450,326
Total	6,200,089

D.4 ALTERNATIVE METHODS FOR VALUATION

Information on alternative valuation methods used can be found in the respective sections on valuation for Solvency purposes for each class of assets and liabilities.

D.5 ANY OTHER INFORMATION

D.5.1 Calculation of the credit spreads used for the valuation of financial liabilities

In the internal model, the credit spread curves used for valuation and risk purposes are derived from fitted yield curves based on benchmark bond portfolios by using an industry standard model. The credit spread curves are calculated as the difference between the credit yield curve (for example, government bonds) and the base curve, which is the EIOPA risk-free rate curve.

D.5.2 Other material information

All material information regarding the valuation of assets, technical provisions, and other liabilities for Solvency purposes has been addressed in the previous sections.

CAPITAL MANAGEMENT

E

E.1 OWN FUNDS

E.1.1 Objectives, policies, and processes

One of the core objectives under Allianz's strategy is to maintain the Group's financial strength. Capital is a central resource that supports multiple activities across the entire Allianz Group, with the Group's risk-bearing capacity providing a foundation for its long-term viability and, by extension, the trust of our customers.

Allianz applies an integrated capital management framework, taking into account the risk appetite and risk capital allocation across the Group. Capital management is designed to protect the Group's Own Funds base and support effective capital management at Group level in line with the Group Risk Policy. Both risk considerations and Own Funds needs are integrated into management and decision-making processes through the attribution of risk and allocation of Own Funds to the various segments, lines of business, and investments.

The company has formalized and clarified its capital management strategy in its capital management policy. The core tenet of the capital management approach is the consideration of Own Funds as a Group resource to be held centrally by Allianz SE and to be virtually allocated top-down to those operating entities, businesses, or products earning the highest returns over cost of capital. This approach has the following implications for physical capital (Own Funds) allocation:

- Fungibility of capital is maximized through the central pooling of capital and risks.
- Locally held capital is limited to the minimum regulatory requirement (and rating agency requirements, where applicable) – plus an adequate volatility buffer – and any excess capital is upstreamed to Allianz SE.

The current liquidity plan and solvency projections reflect all planned changes in Own Funds for the next three years. A strategic liquidity reserve is held centrally by Allianz SE and is available as a contingent source of capital for related undertakings, should the need for local capital increase arise.

There were no material changes over the reporting period with regard to objectives, policies, and processes employed by Allianz for managing its Own Funds.

E.1.2 Scope of consolidation

For a detailed description of the scope of consolidation, please refer to chapter "D Valuation for Solvency Purposes".

E.1.3 Compilation process for eligible Own Funds

The Allianz Group's eligible Own Funds are composed of eligible Own Funds of EEA and non-EEA entities included with a fully consolidated MVBS, the sectoral Own Funds of credit institutions, investment firms and financial institutions, alternative investment fund managers and UCITS¹ management companies as well as institutions for occupational retirement provisions, and the equivalent Own Funds of entities included via the deduction and aggregation (D&A) method. Group solvency is calculated by using a combination of method 1 and method 2, where method 2 refers to entities included in the Group via the D&A method. Entities included in the Group via the D&A method are Allianz Life Insurance Company of North America², Allianz Risk

Transfer (Bermuda) Ltd., Allianz Seguros S.A., and AGCS Resseguros Brasil S.A.

The following list and figure illustrate the various Own Funds definitions under Solvency II, which are also used in the following sections:

- (1) Basic Own Funds (after deductions),
- (2) Ancillary Own Funds,
- (3) Available Own Funds (excluding Own Funds from other financial sectors and from undertakings included via D&A) to meet the consolidated Solvency Capital Requirement (SCR),
- (4) Available Own Funds (excluding Own Funds from other financial sectors and from undertakings included via D&A) to meet the consolidated MCR,
- (5) Eligible Own Funds (excluding Own Funds from other financial sectors and from undertakings included via D&A) to meet the consolidated SCR,
- (6) Eligible Own Funds (excluding Own Funds from other financial sectors and from undertakings included via D&A) to meet the consolidated MCR,
- (7) Sectoral Own Funds of credit institutions, investment firms and financial institutions, alternative investment fund managers and UCITS management companies,
- (8) Sectoral Own Funds of institutions for occupational retirement provisions,
- (9) Equivalent Own Funds of entities included via the D&A method,
- (10) Eligible Own Funds (including Own Funds from other financial sectors and from undertakings included via D&A) to meet the Group SCR.

1_Undertakings for collective investments in transferable securities.

2_The Group supervisor approved the inclusion via D&A for Allianz Life Insurance Company of North America, including Allianz Life Insurance Company of Missouri and Allianz Life Insurance Company of New York.

Figure 4: Own Funds as defined by Solvency II

		Own Funds relating to entities delivering a fully consolidated MVBS				Sectoral Own Funds Equivalent Own Funds		
		Available to meet consolidated ...		Eligible to meet consolidated ...				
		SCR	MCR	SCR	MCR			
Basic Own Funds	(1)	(3)	(4)	(5)	(6)			
Ancillary Own Funds	(2)							
Sectoral Own Funds / Equivalent Own Funds						(7) (8) (9)		
Eligible Group Own Funds to meet Group SCR	(10)			(5)	+	(7) (8) (9)		

The following figure illustrates the Own Funds compilation process showing subtotals as defined above. The focus in the Allianz Group's capital markets communication is generally on the eligible Own Funds (including Own Funds from other financial sectors and from undertakings included via D&A) to meet the Group SCR (10).

Transitional measures for technical provisions

At the request of BaFin, the transitional measures for technical provisions were recalculated in 2024 based on the current interest rate environment. As a result of this recalculation, there is no longer a reduction in technical provisions from transitional measures as of 31 December 2024. However, numbers, figures, and statements referring to 31 December 2023 in this chapter include the impact from transitional measures for technical provisions, unless otherwise stated.

Further details on the compilation of the eligible Own Funds shown above are disclosed in the following sections.

E.1.4 Reconciliation between IFRS and MVBS excess of assets over liabilities

The MVBS excess of assets over liabilities amounted to € 81,389,895 thou, whereas the IFRS excess of assets over liabilities amounted to € 64,075,915 thou. The difference of € 17,313,980 thou was largely attributable to the following key drivers:

- (1) IFRS balance sheet items not recognized in the MVBS (e.g., goodwill),
- (2) revaluation to fair value of assets and liabilities that are valued at amortized cost under IFRS (such as real estate and loans),
- (3) differences in disclosure and valuation of subordinated liabilities,
- (4) differences in recognition and valuation of technical provisions and reinsurance recoverables,

- (5) differences in recognition and valuation of risk margin and risk adjustment,
- (6) differences in disclosure of deposits to cedants and from reinsurers,
- (7) differences in the disclosure of insurance and intermediaries receivables and payables,
- (8) participations, and
- (9) deferred taxes on the balance sheet differences given above.

The following table discloses quantitative details on these drivers. They have been compiled using the "IFRS adjusted for MVBS scope" balance sheet.

Table 39: Reconciliation between IFRS and MVBS excess of assets over liabilities

€ thou

As of 31 December 2024	
IFRS excess of assets over liabilities	64,075,915
(1) Goodwill and intangible assets	(12,638,669)
(2) Property (before PHP and tax)	3,680,086
(3) Subordinated liabilities ¹	(3,732,607)
(4) Technical provisions net of reinsurance recoverables	61,978,737
(5) Risk margin	(6,623,023)
(6) Insurance and intermediaries receivables and payables	(7,056,429)
(7) Deposits to cedants and from reinsurers	(1,098,292)
(8) Participations ²	(8,445,513)
(9) Deferred taxes	(8,821,845)
Other	71,534
MVBS excess of assets over liabilities	81,389,895

1_ Includes Tier 1 restricted subordinated bonds that are disclosed in IFRS shareholder's equity but remain a liability in the MVBS presentation. See detailed explanations in the chapter "D Valuation for Solvency Purposes".

2_ See detailed explanations in the chapter "D Valuation for Solvency Purposes".

A line-by-line description of the differences between IFRS and MVBS can be found in chapter "D Valuation for Solvency Purposes".

E.1.5 Basic Own Funds (after deductions) and available Own Funds

Basic Own Funds are based on the excess of assets over liabilities, amounting to €81,389,895 thou, which is derived from the consolidated MVBS of all fully consolidated entities of our Group. The consolidation is done according to IFRS accounting consolidation rules for entities in scope of MVBS and Own Funds reporting. Adjustments are made to the accounting consolidation data, according to Solvency II rules, with regard to the recognition and valuation of balance sheet items, as well as with regard to the scope of consolidation.

More precisely, any intra-group transactions between the entities delivering a fully consolidated MVBS are eliminated. To the extent that there are any intra-group transactions between entities delivering a fully consolidated MVBS and entities from other financial sectors, or with entities included via D&A, which would lead to a double recognition of Own Funds in the Group, these intra-group transactions are eliminated as well. The consolidation process outlined above ensures the elimination of double use of Own Funds.

In a second step, subordinated liabilities that qualify as basic Own Funds, amounting to €17,379,195 thou, were added to the consolidated excess of assets over liabilities. These subordinated liabilities almost exclusively consisted of subordinated bonds issued or guaranteed by Allianz SE, which are classified as Tier 1 restricted or Tier 2 basic Own Funds, including Solvency-II-compliant instruments, as well as instruments included as eligible Own Funds under transitional rules. Deductions from the excess of assets over liabilities were made with regard to the foreseeable dividend and distributions of Allianz SE amounting to €5,943,159 thou, own shares of Allianz SE amounting to €73,158 thou, restricted Own Funds items relating to ring-fenced funds amounting to €614 thou and for Own Funds from the financial statements that should not be represented by the reconciliation reserve and did not meet the criteria to be classified as Solvency II Own Funds amounting to €1,345 thou.

Solo Own Funds which are unavailable to the Group reduced basic Own Funds by a further €6,921,640 thou. This reduction was mainly driven by the unavailable surplus funds of Allianz Lebensversicherungs-AG and Deutsche Lebensversicherungs-AG, the unavailable amount of net deferred tax assets of Allianz of America Inc., and the unavailable non-controlling interests at Group level of Unicredit Allianz Vita S.p.A., Allianz Ayudhya Assurance Public Company Limited, Allianz Life Insurance Malaysia Berhad, Unicredit

Allianz Assicurazioni S.p.A., and BBVA Allianz Seguros y Reaseguros S.A.

Since the first quarter of 2018, as required by BaFin in the context of the D&A approval for Allianz Life Insurance Company of North America (Allianz Life US), the Allianz Life US equivalent Own Funds have to be reduced by 50% of the Risk-Based-Capital Company-Action-Level (RBC CAL) requirement within the Group calculation. In the fourth quarter of 2024, this deduction decreased the Group Own Funds by €1,294,895 thou.

Further deductions amounting to €5,042,753 thou were made for participations in credit institutions, investment firms and financial institutions, alternative investment fund managers and UCITS management companies, as well as for institutions for occupational retirement provisions, which were mainly related to Pacific Investment Management Company LLC, Allianz Asset Management of America LLC, Allianz Asset Management GmbH, Allianz Bank Financial Advisors S.p.A., Allianz Retraite S.A., as well as for participation in entities included via the D&A method, mainly related to Allianz Life US, Allianz Seguros S.A., and Allianz Risk Transfer (Bermuda) Ltd.

In total, the Allianz Group's basic Own Funds amounted to €80,786,421 thou. There were no ancillary Own Funds. The Group's available Own Funds (excluding Own Funds from other financial sectors and from undertakings included via D&A) to meet the consolidated SCR amounted to €80,786,421 thou.

The Group's available Own Funds (excluding Own Funds from other financial sectors and from undertakings included via D&A) to meet the minimum consolidated SCR (MCR) consisted of Tier 1 and Tier 2 basic Own Funds and amounted to €79,046,142 thou.

E.1.6 Eligible Own Funds (excluding Own Funds from other financial sectors and from undertakings included via D&A)

The Allianz Group's eligible Own Funds (excluding Own Funds from other financial sectors and from undertakings included via D&A) result from available Own Funds (excluding Own Funds from other financial sectors and from undertakings included via D&A) after applying tier limits. As of 31 December 2024, the application of tier limits did not lead to a change in the structure or total amount of our eligible Own Funds to meet the consolidated SCR. The application of tier limits on our available Own Funds to meet the minimum consolidated SCR reduced Tier 2 Own Funds by € 7,606,597 thou, as, by definition, the items in this category are only eligible to cover up to 20% of the minimum consolidated SCR.

The Allianz Group's eligible Own Funds (excluding Own Funds from other financial sectors and from undertakings included via D&A) were attributed to the following tiers:

Table 40: Eligible Own Funds (excluding Own Funds from other financial sectors and from undertakings included via D&A)

€ thou

As of 31 December 2024	Total	Tier 1 unrestricted	Tier 1 restricted	Tier 2	Tier 3
Eligible Own Funds (excluding Own Funds from other financial sectors and from undertakings included via D&A) to meet the consolidated SCR	80,786,421	61,703,230	4,519,752	12,823,160	1,740,279
Eligible Own Funds (excluding Own Funds from other financial sectors and from undertakings included via D&A) to meet the minimum consolidated SCR	71,439,545	61,703,230	4,519,752	5,216,563	-

Our eligible Own Funds to meet the minimum consolidated SCR amounted to € 71,439,545 thou and exceeded the minimum consolidated SCR amounting to € 26,082,814 thou.

E.1.7 Eligible Own Funds (including Own Funds from other financial sectors and from undertakings included via D&A) to meet the Group SCR

Eligible Own Funds (including Own Funds from other financial sectors and from undertakings included via D&A) to meet the Group SCR amounted to € 93,212,185 thou. They comprised sectoral Own Funds of credit institutions, investment firms and financial institutions,

alternative investment fund managers, and UCITS management companies amounting to € 3,201,431 thou, sectoral Own Funds of institutions for occupational retirement provision amounting to € 1,611,813 thou, and equivalent Own Funds of entities included via the D&A method amounting to € 7,612,521 thou.

Our sectoral Own Funds consisted of € 4,802,950 thou in Tier 1 unrestricted Own Funds, € 52 thou in Tier 2 Own Funds, and € 10,241 thou in Tier 3 Own Funds.

Equivalent Own Funds of entities included via the D&A method consisted of € 7,612,521 thou in Tier 1 unrestricted Own Funds.

Table 41: Eligible Own Funds (including Own Funds from other financial sectors and from undertakings included via D&A)

€ thou

As of 31 December 2024	Total	Tier 1 unrestricted	Tier 1 restricted	Tier 2	Tier 3
Eligible Own Funds (including Own Funds from other financial sectors and from undertakings included via D&A) to meet the Group SCR	93,212,185	74,118,701	4,519,752	12,823,212	1,750,520
in % of total	100.0	79.5	4.8	13.8	1.9

E.1.8 Structure, amount, and quality of basic Own Funds (after deductions)

The Allianz Group's basic Own Funds (after deductions) amounted to € 80,786,421 thou and consisted of € 61,703,230 thou in Tier 1 unrestricted Own Funds, € 4,519,752 thou in Tier 1 restricted Own Funds, € 12,823,160 thou in Tier 2 Own Funds, and € 1,740,279 thou in Tier 3 Own Funds.

Tier 1 unrestricted Own Funds mainly represented ordinary share capital and share premium of Allianz SE amounting to € 29,212,215 thou, the available part of the surplus funds amounting to € 8,166,757 thou (mainly relating to Allianz Lebensversicherungs-AG, Allianz Private Krankenversicherungs-AG and Allianz Vie S.A.), the reconciliation reserve amounting to € 27,985,025 thou, the available part of the minority interests amounting to € 1,181,982 thou, and capital contributions reported by Allianz Global Life dac, Allianz Re

Dublin dac, Darta Saving Life Assurance dac and Allianz p.l.c. as "other Own Funds approved by supervisory authority" amounting to € 201,348 thou.

The reconciliation reserve represents the residual of excess of assets over liabilities (€ 81,389,895 thou) after deducting ordinary share capital, share premium related to ordinary share capital, surplus funds, the amount equal to the value of net deferred tax assets, other items approved by supervisory authorities, minority interests, own shares of Allianz SE (€ 73,158 thou), foreseeable dividends and distributions of Allianz SE (€ 5,943,159 thou) and the adjustment for restricted Own Funds items relating to ring-fenced funds (€ 614 thou).

Own Funds from the financial statements that should not be represented by the reconciliation reserve and do not meet the criteria to be classified as Solvency II Own Funds amounted to € 1,345 thou.

Deductions for participations in entities from other financial sectors and in entities included via the D&A method reduced the Tier 1 unrestricted Own Funds by € 4,395,607 thou.

Tier 1 restricted Own Funds and Tier 2 Own Funds correspond to the available part of subordinated liabilities. Tier 1 restricted Own Funds consist of subordinated instruments that directly qualify or are included based on transitional rules and amounted to € 4,519,752 thou. Tier 2 Own Funds amounted to € 12,823,160 thou and consist of instruments that directly qualify. Tier 3 basic Own Funds relate to the available part of net deferred tax assets and amounted to € 1,740,279 thou.

The following table provides details with regard to the individual basic Own Funds items and the respective classification into tiers:

Table 42: Breakdown of basic Own Funds (after deductions) 2024

€ thou

As of 31 December 2024	Total	Tier 1 unrestricted	Tier 1 restricted	Tier 2	Tier 3

Own Funds from the financial statements that should not be represented by the reconciliation reserve and do not meet the criteria to be classified as Solvency II Own Funds	(1,184)	-	-	-	-
Subtotal	101,336,352	82,981,623	5,792,260	10,434,054	2,128,415
Deductions for participations in other financial sector undertakings	(3,809,144)	(3,809,144)	-	-	-
Deduction for participations when using D&A or combination of methods	(2,367,934)	(2,367,934)	-	-	-
Total non-available Own Funds items	(7,115,606)	(6,563,445)	(33,774)	-	(518,387)
Total deductions	(13,292,684)	(12,740,523)	(33,774)	-	(518,387)
Basic Own Funds (after deductions)	88,043,668	70,241,100	5,758,486	10,434,054	1,610,028

1_The reconciliation reserve represents the residual of excess of assets over liabilities after deducting ordinary share capital, share premium related to ordinary share capital, surplus funds, the amount equal to the value of net deferred tax assets, other items approved by supervisory authorities, minority interests, own shares, foreseeable dividends, and the adjustment for restricted Own Funds items relating to matching adjustment portfolios and ring-fenced funds.

The classification into tiers follows the criteria set out in Articles 93 to 96 of the Directive 2009/138/EC, as well as in Articles 69 to 78 of the Delegated Regulation (EU) 2015/35. Ordinary share capital (paid in),

share premium related to ordinary share capital, surplus funds, minority interests, and the reconciliation reserve are classified as Tier 1 unrestricted Own Funds; the amount corresponding to the value of net

deferred tax assets is classified as Tier 3 Own Funds. Subordinated liabilities are classified into Tier 1 restricted and Tier 2, based on the terms and conditions of the respective subordinated liability:

Table 44: Subordinated bonds outstanding as of 31 December 2024 – counted under transitional rules

thou

Issuer	Year of issue	Currency	Notional amount in currency	MVBS value in €	Coupon in %	Tier	Maturity date	First ordinary call date	Next ordinary call date	Frequency (ordinary calls)
Unicredit Allianz Vita S.p.A., Milan	2003	EUR	45,000	45,005	6-months Euribor + 140 bps	1 restricted	Perpetual	-	-	-

All instruments that are counted as eligible Own Funds under transitional rules are subordinated bonds or loans that did qualify as eligible Own Funds under Solvency I as per year-end 2015.

Table 45: Subordinated bonds outstanding as of 31 December 2024 – not counted under transitional rules

thou

Issuer	Year of issue	Currency	Notional amount in currency	MVBS value in €	Coupon in %	Tier	Maturity date	First ordinary call date	Next ordinary call date	Frequency (ordinary calls)

	2015	EUR	1,500,000	1,500,593	2.241	2	7 July 2045	7 July 2025	7 July 2025	Quarterly

In January and September 2024, Allianz SE issued Tier 2 subordinated bonds with a notional amount of € 1,000,000 thou and USD 1,250,000 thou respectively. Allianz SE also partly repurchased € 874,300 thou of a Tier 1 restricted subordinated bond with a notional amount of € 1,500,000 thou in January 2024, and redeemed the remaining € 625,700 thou in September 2024.

E.1.9 Nature of the restrictions to the transferability and fungibility of Solo Own Funds

Solvency II has introduced availability constraints linked to the fungibility and transferability concepts. Components of Solo Own Funds, which cannot effectively be made available for the Group (in the following called “unavailable Solo Own Funds”), are subject to a limitation with regard to their inclusion in eligible Own Funds. The limitation is generally defined by the Solo entity's contribution to the Group Solvency Capital Requirement. Any unavailable Solo Own Funds of an entity exceeding that entity's contribution to the Group

Solvency Capital Requirement are defined as “unavailable Solo excess Own Funds” and need to be deducted – and therefore do not count as eligible Own Funds.

Eligible Own Funds of a Solo entity are considered fungible and/or transferable if they meet the following conditions:

- **Fungibility:** Own Funds items are not subject to legal or regulatory requirements restricting the ability of these items to absorb all types of losses wherever they arise in the Group.
- **Transferability:** There are no legal or regulatory requirements restricting the transferability of assets to other Solo entities within the Group.
- **Timing restriction:** Transferability and fungibility restrictions that can be removed within the next nine months do not have to be taken into account when determining unavailable Own Funds. The sale of a subsidiary might be considered as a potential removal of any transferability and fungibility restrictions relating to this subsidiary's Own Funds.

Solvency II legislation provides a concrete list of Own Funds items that have to be considered or are assumed to be unavailable at Group level:

- Two Own Funds items are always and mandatorily unavailable without any option to demonstrate otherwise:
 - surplus funds and
 - ordinary share capital called up but not paid in.
- The following Own Funds items are assumed to be unavailable, but the Solo entity has the option to credibly demonstrate that the unavailability assumption for the respective Own Funds item is inappropriate in light of the entity's specific circumstances:
 - ancillary Own Funds,
 - preference shares,
 - subordinated mutual member accounts,
 - subordinated liabilities, and
 - an amount equal to the value of net deferred tax assets.

Non-controlling interests in an insurance or insurance holding company's Own Funds or in ancillary service undertakings cannot be considered to be effectively available for covering the SCR of the Group.

As of 31 December 2024, deductions amounting to € 6,921,640 thou were made for unavailable Solo Own Funds, thereof € 4,223,824 thou from Surplus Funds, € 449,491 thou from net deferred tax assets and € 2,248,324 thou attributable to non-

controlling interests. The deductions affected 81 entities, with the most important ones listed in the following table:

Table 46: Overview of major deductions relating to unavailable Solo Own Funds by legal entity

€ thou

As of 31 December 2024	Country	Own Funds item	Amount of unavailable Own Funds	Amount of contribution to Group SCR	Deduction from eligible Own Funds
Allianz Lebensversicherungs-Aktiengesellschaft	Germany	Surplus Funds	10,280,599	6,179,387	4,101,212
Unicredit Allianz Vita S.p.A.	Italy	Non-controlling interests	775,323	158,115	617,208
Allianz Ayudhya Assurance Public Company Limited	Thailand	Non-controlling interests	626,900	283,043	343,857
Allianz of America Inc.	USA	Net deferred tax assets	633,012	298,222	335,667
Allianz Life Insurance Malaysia Berhad	Malaysia	Non-controlling interests	248,733	110,927	137,806
Unicredit Allianz Assicurazioni S.p.A.	Italy	Non-controlling interests	169,809	34,000	135,809
BBVA Allianz Seguros y Reaseguros S.A.	Spain	Non-controlling interests	179,587	46,946	132,641
Deutsche Lebensversicherungs-Aktiengesellschaft	Germany	Surplus Funds	167,065	44,475	122,612
Allianz PNB Life Insurance Inc.	Philippines	Non-controlling interests	138,054	39,136	98,918
Allianz General Insurance Company (Malaysia) Berhad	Malaysia	Non-controlling interests	149,420	61,551	87,869
Volkswagen Autoversicherung AG	Germany	Non-controlling interests	129,456	46,199	83,257
Other					724,784
Total					6,921,640

The deductions in the position "Other" were related to 70 entities, of which 42 entities represented deductions for non-controlling interests with a total deduction of € 564,407 thou. 23 entities represented deductions for net deferred tax assets with a total deduction of € 73,321 thou, and five entities represented deductions for non-controlling interests of € 40,504 thou and net deferred tax assets of € 46,552 thou. The individual deduction per entity was not higher than € 70,000 thou in this position.

In addition to the transferability deductions for entities delivering a fully consolidated MVBS listed above, the equivalent Own Funds of Allianz Life US were reduced by € 1,294,895 thou within the Group calculation, representing 50% of the RBC CAL requirement of Allianz Life US.

E.1.10 Own Funds movements over the reporting period

Over the reporting period from 1 January 2024 to 31 December 2024, eligible Group Own Funds, excluding transitional measures for technical provisions, increased from € 89,558,120 thou to € 93,212,185 thou, a difference of € 3,654,065 thou. Due to a recalculation of the transitional measures for technical provisions, the impact on our eligible Group Own Funds decreased from € 10,166,023 thou as per 31 December 2023 to zero as per 31 December 2024. The following table shows the main drivers for this increase in eligible Own Funds.

Table 47: Own Funds movement

€ thou

	Life/Health	Property-Casualty	Asset Management	Corporate and Other	Group
Eligible Own Funds as of 1 January 2024 (excluding transitional measures for technical provisions)					89,558,120
Regulatory changes/model changes (after-tax impact)					(751,448)
Operating SII earnings, thereof:	5,154,083	8,360,894	3,010,529	(1,398,832)	15,126,675
New business contribution	2,225,352				2,225,352
Expected inforce contribution	3,700,725				3,700,725
Assumption changes & Experience variances	(771,993)				(771,993)
Debt costs				(908,833)	(908,833)
Other	-	8,360,894	3,010,529	(489,999)	10,881,425
Market impact including foreign currency translation effects	(125,124)	(502,367)	74,813	531,242	(21,436)
Capital management					(7,005,503)
Management actions					(481,179)
Tax, thereof:	(770,465)	(1,807,975)	(332,465)	(148,114)	(3,059,019)
Tax relating to Operating SII earnings					(3,685,309)
Other changes, thereof:					(154,023)
Changes in transferability restrictions					(503,504)
Eligible Own Funds as of 31 December 2024					93,212,185

Regulatory changes / model changes

As a result of regulatory and model changes, we registered a € 751,448 thou decrease of Own Funds after tax in 2024, mainly driven by impacts of central, minor and immaterial model changes of Allianz Lebensversicherungs-AG and Allianz Private Krankenversicherungs-AG.

Operating Solvency II earnings

Operating Solvency II earnings for the fiscal year 2024 amounted to € 15,126,675 thou before tax and dividend accrual.

For the Life/Health business segment, operating Solvency II earnings were € 5,154,083 thou, below the operating profit under IFRS. This amount included € 2,225,352 thou from newly generated business. The contribution from in-force business would have been € 3,700,725 thou, as expected, but was reduced by a total of € 771,993 thou, due to experience variances and changes in underlying assumptions.

The Property-Casualty business segment recorded operating Solvency II earnings of € 8,360,894 thou, above the respective IFRS result.

At the Asset Management business segment, operating SII earnings were € 3,010,529 thou and below to corresponding IFRS figures.

In the business segment Corporate and Other, we recorded negative operating Solvency II earnings of € 1,398,832 thou. This included external debt interest expenses to the amount of € 908,833 thou. Non-operating IFRS restructuring charges are not included in operating Solvency II earnings.

Market impact

In the course of the year, market impact decreased the eligible Own Funds by € 21,436 thou. In 2024, apart from a € 987,244 thou increase due to foreign exchange (FX) movements, other economic changes decreased the eligible Own Funds of the Group by € 1,008,680 thou, of which € (666,519) thou relate to the Life/Health business segment, € (961,822) thou to the Property-Casualty business segment, and € 619,661 thou to the business segment Corporate and Other.

Capital management

Capital management measures consumed € 7,005,503 thou of our eligible Own Funds in 2024. A significant part of this was due to the dividend accrual for 2024; € 5,943,159 thou in total. On the other hand, the issuance and redemption of subordinated debt instruments had a total net impact of € 591,441 thou on our eligible Own Funds in 2024.

On 22 February 2024, Allianz SE announced the launch of a new share buy-back program with a volume of up to € 1,000,000 thou. On 7 August 2024, Allianz SE launched an additional share buy-back program in an amount of up to € 500,000 thou. In total, both share buy-back programs led to a reduction of our eligible Own Funds of € 1,500,000 thou.

In the period from March through October 2024, a total of 5,552,307 shares were repurchased for a sum total of € 1,499,999 thou and canceled in the fourth quarter.

Management actions

Management actions decreased our eligible Own Funds by € 481,179 thou in 2024. The most notable of these with a positive effect were the sale of the Fireman's Fund insurance businesses in the United States to Arch Insurance North America (€ 234,757 thou) and the

update of an existing reinsurance agreement of Allianz Life US amounting to € 188,757 thou. The most notable management actions with a negative effect were the acquisition of TUA Assicurazioni S.p.A. amounting to € (94,767) thou and a new distribution agreement amounting to € (160,000) thou. Changes in our SCR related to management actions at Allianz Lebensversicherungs-AG resulted in a change in transferability deductions of surplus funds. Consequently, our eligible Own Funds decreased by € 220,236 thou.

Tax

Taxes decreased our eligible Own Funds by € 3,059,019 thou in 2024. The negative effect of taxes relating to operating Solvency II earnings amounted to € 3,685,309 thou.

Other changes

Other changes amounting to € 154,023 thou affected our eligible Own Funds negatively in 2024. Most of this was attributable to movements of Surplus Funds and Going Concern Reserves, changes in transferability restrictions, as well as restructuring charges.

Transitional measures for technical provisions

Eligible Own Funds as of 31 December 2023 include the impact from the application of transitional measures for technical provisions of Allianz Lebensversicherungs-AG and Allianz Private Krankenversicherungs-AG in the amount of € 10,166,023 thou.

Due to a recalculation of the transitional measures for technical provisions, the impact on our eligible Group Own Funds decreased to zero as per 31 December 2024.

The decrease in eligible Group Own Funds is allocated to the following tiers:

Table 48: Change in eligible Own Funds per tier (including transitional measures for technical provisions)

€ thou

	Total	Tier 1 unrestricted	Tier 1 restricted	Tier 2	Tier 3
As of 31 December 2023	99,724,143	81,912,697	5,758,486	10,434,091	1,618,869
As of 31 December 2024	93,212,185	74,118,701	4,519,752	12,823,212	1,750,520
Change over reporting period	(6,511,957)	(7,793,996)	(1,238,734)	2,389,122	131,651

Changes to Tier 1 unrestricted Own Funds include the impact of the recalculation of transitional measures for technical provision resulting in a benefit of zero.

Tier 1 restricted Own Funds decreased through the partial repurchase and redemption of a € 1,500,000 thou subordinated debt instrument in the first and third quarter of 2024.

Changes in interest rates and foreign exchange rates, which impacted the MVBS valuation of subordinated debt, resulted in an increase of Tier 1 restricted Own Funds.

Tier 2 Own Funds increased through the issuance of two subordinated debt instruments in the amount of € 1,000,000 thou and USD 1,250,000 thou in the first and third quarter of 2024.

Changes in interest rates and foreign exchange rates, which impacted the MVBS valuation of subordinated debt, resulted in the increase of Tier 2 Own Funds.

Under Solvency II, changes in the issuers' own credit standing must not be reflected in the valuation of subordinated debt. For this reason, MVBS values can differ from observable market values.

Changes to Tier 3 Own Funds were related to changes in the available amount of net deferred tax assets.

E.2 SOLVENCY CAPITAL REQUIREMENT AND MINIMUM CAPITAL REQUIREMENT

As of 31 December 2024, the Allianz Group's Solvency II Capital Requirement (SCR) amounted to € 44,703,373 thou.

The Minimum consolidated Group Solvency II Capital Requirement (MCR) amounted to € 26,082,814 thou, as of 31 December 2024.

A breakdown of the SCR by risk modules (for standard formula entities), as well as by different risk categories (for internal model entities) is shown in the chapter "C Risk Profile", table 20, "Solvency II Capital Requirements at the level of risk components for standard formula and internal model insurance entities".

A breakdown of the SCR by different risk categories is shown in chapter "C Risk Profile", table 19, "Solvency II Capital Requirement". The table also contains information on the components used to calculate the consolidated Group SCR. As of 31 December 2024, the SCR and the MCR figures for the Allianz Group were considered to be final¹.

Compared to 2023, the overall Group SCR increased from € 43,484,650 thou to € 44,703,373 thou. As discussed in previous sections, the increase in the Solvency II Capital Requirement was driven by changes in both single risk categories and add-ons.

E.2.1 Use of standard formula and simplifications

For entities that use the standard formula to determine their Solo SCRs, standard formula results are used for the aggregation of the Group Solvency II Capital Requirement. Simplifications are applied in the "counterparty default" risk module of the standard formula calculations.

E.2.2 Use of undertaking-specific parameters in the standard formula

The following entities within the Allianz Group have received supervisory approval to use undertaking-specific parameters (USP) in determining their SCR according to the standard formula:

Table 49: Undertaking-specific parameters used by entities within the Allianz Group

Entity	USP used
UniCredit Allianz Assicurazioni S.p.A.	Standard deviation for Non-Life premium risk
Fragonard Assurance S.A.	Standard deviation for Non-Life premium risk
AGA International	Standard deviation for Non-Life premium risk

The impacts of the application of local USPs on both the SCR and the MCR of the Allianz Group were below 1%.

E.2.3 Inputs used for the MCR calculation

The Group MCR is determined by adding up the Solo MCRs of the (re)insurance entities consolidated for the Group SCR calculation according to Article 230(2) of the Directive 2009/138/EC.

1_Still subject to supervisory assessment.

E.3 USE OF THE DURATION-BASED EQUITY RISK SUB-MODULE IN THE CALCULATION OF THE SOLVENCY CAPITAL REQUIREMENT

Germany did not make use of the option to apply a duration-based equity risk sub-module. Consequently, neither did the Allianz Group.

E.4 DIFFERENCES BETWEEN THE STANDARD FORMULA AND ANY INTERNAL MODEL USED

This section describes the scope and usage of the internal model, the underlying methodology, and the aggregation procedure, concluding with an overview of the differences between the internal model and the standard formula.

E.4.1 Scope and usage of the internal model

For business units covered by the internal model and their description, please refer to the QRT S.32.01.22 in the Appendix. The risk categories covered by the internal model are presented and explained in chapter “C Risk Profile”. The scope of the internal model has also been described in the section “B.3.4.2 Coverage of the risk capital calculations”.

The internal model is at the core of our risk management framework. It is used to measure the quantifiable risks, to steer our business in areas such as capital management – in particular with regard to the dividend policy of the Group – and to measure the return on risk capital for all business activities. For a detailed description of the various purposes for which we use the internal model, please refer to the section “B.3.4.1 Risk-based steering and risk management”.

E.4.2 Methodology underlying the internal model

Our internal model is based on a Value at Risk (VaR) approach using the Monte Carlo simulation. Risk calculation begins with the market

value balance sheet, attributing each asset and liability position to relevant risk drivers and associated risk categories. A bond’s value, for example, will be impacted by the respective risk-free interest rate curve and credit spread curve (amongst other things). As a result, it will be covered by the respective market risk categories, such as interest rate, credit spread or currency risk, as well as the credit risk category.

Risk capital is defined as the change in economic net fair value of assets and liabilities over the projected period, based on the underlying and joint distribution assumptions for each risk factor. More specifically, we determine the maximum loss in the portfolio value of our businesses in the scope of the model within a specified timeframe (“holding period”, one year) and probability of occurrence (“confidence level”, 99.5%). Risk capital is computed from the simulated profit and loss distribution, where all assets and liabilities are revalued in each scenario based on simulated realization of all risk factors.

Wherever possible, distributions are calibrated to market data or our own internal historical data, for example, in setting actuarial assumptions. In addition, we consider recommendations from the insurance industry, supervisory authorities, and actuarial associations.

The internal model contains a range of risk categories, which can be subdivided into risk types. For each of these two levels, the internal model provides risk figures on a stand-alone basis – i.e., before diversification to other risk types or categories – but also at an aggregated level which takes account of diversification (see section “E.4.3 Aggregation and capital add-ons”). A more detailed description of each risk category can be found in the chapter “C Risk Profile”.

For the valuation of technical provisions, a volatility adjustment (VA) is applied on top of the risk-free interest rate curve (see section “D.2.2.5 Methods and assumptions used for valuation”). As the VA is derived from credit spreads, simulated changes in the credit spreads

conceptually also imply changes in the VA used in each underlying scenario of the risk calculation. These changes can consequently be anticipated and considered for the valuation of technical provisions in each underlying scenario to reflect them in the risk capital. Therefore, the internal model contains a dynamic component to cover this impact. Allianz’s approach to model the dynamic component differs methodologically from the static VA concept applied in the standard formula. In our risk capital calculations, we reflect the impact of the dynamic movement of the VA based on the credit spread movements of our own portfolio. This asset-sided effect is transferred to the liability side by using asset and liability durations. To account for deviations with respect to the EIOPA VA methodology, Allianz applies a more conservative, reduced application ratio for the dynamic volatility adjustment. A regular validation is performed to verify the appropriateness and prudence of the approach.

Allianz performs several stress tests for market risks (also known as parametric stresses and discussed previously), as well as for underwriting risks, on both a regular and an ad-hoc basis.

The shocks on underwriting risks are simulated by identifying one-in-ten-year non-market risk events and calculating their corresponding impact.

The following two figures show the risk categories contained in the internal model and, for the sake of comparison, the structure of the standard formula.

Figure 6: Structure of the internal model

Figure 7: Structure of the standard formula

E.4.3 Aggregation and capital add-ons

For the aggregation of risks, we use an industry-standard approach based on Gaussian copulas. A correlation matrix defines the interdependencies between the risks modeled by the copula.

Wherever possible, we derive correlation parameters for each pair of market risks through statistical analyses of historical data, considering observations over more than a decade. In case historical market data or other portfolio-specific observations are insufficient or unavailable, correlations are set according to a well-defined group-wide process.

This is done by a dedicated internal committee – the Correlation Setting Committee – which combines the expertise of risk and business experts. The correlations are generally set to reflect the dependency between the full distributions of the factors the correlation refers to. The correlations describing the dependency

between the full distributions are increased by a factor in case a particularly strong dependence in the tails (i.e., in extreme events) is assumed. Empirical evidence is used to support the expert judgment wherever data of sufficient quality is available.

As described in the diversification section of chapter “C Risk Profile”, diversification is driven by the fact that different risks are not fully dependent on each other and not all risks materialize at the same time. This is reflected by the correlations underlying the internal model. The internal model considers a correlation between all risk driver pairs modeled, while the standard formula considers intra- and inter-risk category correlations. Therefore, the diversification benefit in the internal model is larger than in the standard formula. Additional details will be provided in the next section. For further information on diversification effects, please refer to chapter “C Risk Profile”.

To determine our diversified risk capital, the change in economic value is computed for the 200-year event based on the joint occurrence of risks, applying the methodology described in the previous section. Other effects called “internal model capital buffers” are considered for different reasons, such as the potential underestimation of the risk capital by the replicating portfolio quality, material multi-usage of buffers including cross effects, or the loss of diversification due to ring-fenced funds. Further add-ons may be

applied at the local entity level or for specific deficiencies of certain model components.

Additional capital requirements are taken into account for entities that are not included in the scope of the internal model. For insurance entities, these requirements are generally based on the standard formula. Since year-end 2023, the Solvency Capital Requirements for certain smaller insurance undertakings outside the European Economic Area with only immaterial impact on the Group’s risk profile are derived through experience values from the standard model. In the past, these entities did not enter the calculation of capital requirements, as they were accounted for at the Allianz Group level by means of book value deduction. For entities considered according to third-country equivalence principles (mainly Allianz Life Insurance Company of North America), these requirements are based on the respective local capital requirements. Non-insurance entities are included according to their respective sectoral capital requirements, for example, banks or asset managers. These additional capital requirements of the entities that do not apply the internal model are aggregated to the Group Solvency II Capital Requirement based on a factor-based approach. The factor-based approach ensures that the diversification benefit to the Group is appropriately accounted for.

The Allianz Group only applies one internal model for both Group and local SCR calculations. Local model components can be used. However, the responsibility for the local model components and their calibrations lies with the local entity and the components are subject to Group review and validation.

E.4.4 Main differences per risk module between the internal model and the standard formula

A fundamental difference between the standard formula and the internal model is that the standard formula uses factor-based shock scenarios, while the internal model derives the risk capital by simulating each risk driver (and its corresponding economic profit and loss impact) based on its assumed distribution and interdependence with other risk drivers.

The following table gives an overview of differences between the standard formula and the internal model by risk module:

Table 50: Overview of differences between the standard formula and the internal model by risk module

Risk module	Standard formula (factor-based approach)	Internal model (stochastic simulation)
Equity	Several standardized equity shocks, depending on classification of equity investments: – 39 % for equities listed in countries that are members of EEA or OECD (type 1). – 49 % for remaining equity-type investments, commodities, and alternative investments (type 2). – Symmetric adjustment is applied to 39 % and 49 %, base shocks depending on the relation between the current and the average historical market level. – Strategic participation with a risk charge of 22 %. – Other reduced capital charge for qualifying infrastructure (corporate) and long-term equity investments. – Aggregation of equity shocks based on simplified correlation assumption of 0.75 between type 1 and the rest.	Underlying distribution for each equity risk factor modeled is calibrated to market data: – Traded equity indices (approx. 35 % – 60 %, depending on the index). – Non-traded equity indices (approx. 10 % – 80 %, depending on the index and risk classification). – Strategic participations (35 %). – Volatility stresses applied. – Aggregation is based on correlations between different risk factors calibrated to market data and expert estimates.
Interest rate	– Predefined up/down shocks as percentage change to the EIOPA risk-free rates varying by term to maturity from 20 % to 75 %. Minimum up-shock of 100 bps. – Worst case of up and down scenario determines capital requirements. – Down shocks of the negative rates are not allowed.	– Underlying distributions of interest rate term nodes are calibrated to market data for each interest rate curve modeled. – Interest rates shocks in up to 10 nodes are modeled stochastically, whereby nodes beyond the last liquid point are ignored for the liability discount curve; no minimum/maximum shock size is applied. – Volatility stress applied. – Shifted log-normal model allows for down shocks in negative rates.
Equity/interest rate volatility	Not covered explicitly.	Explicit risk factors for implied equity / interest rate implied volatility levels, with the underlying distributions being calibrated to market data.
Inflation	Not covered explicitly.	Explicit risk factors for inflation expectation rates calibrated to market data, with the underlying distributions being calibrated to market data.
Property	25 % for all properties.	Country-/sector-specific real-estate indices (shocks ranging from approx. 19 % to 33 %).
Spread	Spread risk is subdivided into three categories for bonds and loans, securitizations, and credit derivatives. Shock impacts are calculated using a predefined methodology for each category, and summed up to obtain the overall spread module figure: – For bonds, loans, and securitizations, shock factors depend on the respective modified duration and credit rating. No spread risk on certain bonds and loans (e.g., EEA sovereign bonds) denominated and funded in domestic currency. – Credit derivatives: shock factors for an increase in spreads depend on the credit rating of the underlying asset. Down shock of 75 % for all ratings. Shock is then determined by the larger resulting capital requirement. – Where approved by the regulator, the EIOPA volatility adjustment is used as a constant discount rate for the valuation of the technical provisions.	Modeling of various spreads differentiated by, e.g., sector, rating, country/region. The underlying distribution of each modeled spread is calibrated to market data. The main differences are: – EEA sovereign bonds, AAA and AA rated non-EEA sovereign bonds, supranational bonds, and mortgage loans on residential property are not exempt from spread risk. – Shocks for securitization which are calibrated under the internal model are lower than those in the standard formula, which can be as high as 100 %. – For valuation purposes of the technical provisions, the EIOPA volatility adjustment is used where approved by the regulator. In addition, the volatility adjustment is also modeled dynamically within the risk capital calculation. The dynamic component's contribution towards the value of the technical provisions is determined based on the own portfolio movements caused by simulated changes in credit spreads during risk capital calculation.
Currency	– +/- 25 % for each currency, except for currencies pegged to the EUR. – Worst-case scenario is selected for each currency. – No diversification/netting of cross currencies.	– Exchange rate shocks for different currencies vs. EUR (from approximately 18 % to 33 %, depending on the currency).
Concentration	– Formula based on exposure, rating, and total assets held.	– Implicitly covered in the credit risk models and via diversification in market risk modules.
Credit risk/ counterparty default risk	Scope: Limited to specific exposure types: – Type 1: Mainly reinsurance arrangements, derivatives, cash at bank, deposits with ceding undertakings, and commitments. – Type 2: Mainly receivables, policyholder debtors, retail mortgage loans. – Counterparty default risk module does not contain bond portfolio and credit insurance. – Methodology: Closed-formula approach to determine, for exposures in scope of the module, possible losses resulting from unexpected counterparty default. – Parameters: Assigned according to Delegated Regulation (e.g., PDs, LGDs). PDs are predominantly based on ratings from external rating agencies.	Scope: Much broader including: – Investment portfolio: Fixed-income investments, cash positions, derivatives, securities lending and structured transactions, receivables, off-balance exposures (e.g., guarantees, and commitments). – Reinsurance exposures. – Credit insurance exposures. – Methodology: Portfolio model based on Monte Carlo simulation and covering default and migration risk. Loss distribution is determined by considering interdependencies and exposure concentrations. – Parameters: Mostly own internal estimates (e.g., PDs, LGDs). Ratings are derived via an internal rating approach which is based on long-term ratings from rating agencies.
Underwriting risk for Life and Health	– Mortality risk: 15 % increase in mortality rates, 0.15 % mortality calamity. – Longevity risk: 20 % decrease in mortality rates. – Morbidity risk: 35 % increase in the first year, 25 % thereafter, 20 % decrease for recovery rates. – Lapse risk: The lowest of 50 % up and down shock and 70 %/40 % mass lapse shock, depending on business type (retail/non-retail). – Expense risk: 10 % increase in expenses + 1 % increase in expense inflation.	– Mortality risk: Based on company experience, mortality calamity shock is set by expert judgment. – Longevity risk: Derivation of combined level/trend stress is based on the application of a Lee-Carter mortality model using historical population data. – Morbidity risk: Based on company experience, morbidity calamity shock is set by expert judgment. – Lapse risk: Based on company experience, lapse mass shock is set by expert judgment. – Expense risk: Shocks for level and trend (inflation) sub-risks are set via expert judgement. In addition, the internal model covers an expense calamity shock (also set via expert judgement) for new-business risk, which is not modeled under the standard formula.

Risk module	Standard formula (factor-based approach)	Internal model (stochastic simulation)
Underwriting risk for Non-Life & Health (not similar to life techniques) – Premium and reserve risk	In the standard formula, a factor-based approach is used to estimate the combined premium and reserve risk: – Standard volatility factors (market averages) by Solvency II line of business are applied to different volume measures, such as net earned premiums and net claim reserves. – In a linear correlation approach, values are aggregated over Solvency II lines of business and risk modules using pre-defined correlations. – Different sub-modules for Non-Life and Health (not similar to life techniques) Solvency II lines of business. – Allowance for geographical diversification based on a predefined set of regions.	In the internal model, premium non-catastrophe and reserve risk is modeled individually: – Actuarial models are fitted to local company-specific data, leading to a reflection of a company's individual risk profile. – Standard actuarial techniques such as frequency / severity modeling and bootstrapping are used. – The model is more granular than Solvency II lines of business and in line with the risk profile observed in the companies. – Reinsurance application for premium risk is more advanced in the internal model, as single large losses are modeled separately, and non-proportional reinsurance contracts can be applied. – The aggregation method used is based on a Copula approach. – Direct credit insurance exposures are modeled in the credit risk module.
Underwriting risk for Non-Life & Health (not similar to life techniques) – Catastrophe risk	– Catastrophe risk is split into four modules: natural catastrophe, non-proportional property reinsurance, man-made, other. – Standardized shock scenarios are applied as specified by the Delegated Regulation. – The 1-in-200-year-loss natural catastrophe is largely based on shocked sums insured and gross premiums. Reinsurance is applied based on the consideration of single events. Separate approach for health catastrophe risk (mass accident, accident concentration and pandemic modules). – Only lapse risk is considered, with a focus on deterioration of future earnings.	– Natural-catastrophe risk is based on probabilistic models, which use special modeling techniques to combine portfolio data (such as the geographic distribution and characteristics of insured objects and their values) with simulated natural disaster scenarios to estimate the magnitude and frequency of potential losses. – Man-made risk is modeled together with premium non-catastrophe risk. – Reinsurance can be reflected, e.g., single event losses are simulated and mitigated with the respective reinsurance arrangement, if applicable. – Both the lapse and the cost risk are explicitly modeled with a focus on cost coverage.
Underwriting risk for Non-Life & Health (not similar to life techniques) – Business risk		
Loss-absorbing capacity of tax	– The adjustment is equal to the change in value of deferred taxes that results from an instantaneous loss of an amount equal to the Basic Solvency Capital Requirement (BSCR) plus capital requirement for operational risk plus adjustment for the loss-absorbing capacity of technical provisions. Under the standard formula, only the corporate tax rate is considered.	– The tax relief on risk capital is based on tax rates applied to the overall market value balance sheet shock in the 99.5%-quantile scenario, capped by the level of net deferred tax liabilities plus loss carryback capacity. In the internal model framework, a separate tax rate for equities is considered in addition to the corporate tax rate.
Loss-absorbing capacity of technical provisions	– Ensures that for participating business there is no multiple usage of the future discretionary benefit buffers (FDB). – The BSCR is calculated with and without allowance for FDB and the total relief is limited to the current value of FDB.	– As SCR figures are calculated directly on a net basis, based on replicating portfolios for technical provisions, they already include the loss-absorbing capacity of technical provisions. – The cross effects framework further defines a combined shock analysis based on which a capital add-on is applied if multiple usage of buffers should be present.
Intangible asset risk	– 80% of intangible assets recognized.	– Intangible asset risk is not covered by the internal model.
Operational risk	– Factor-based approach based on earned premium amount and technical provisions.	– Scenario-based risk modeling approach. – Risk identification within each entity. – Aggregation of operational risks based on loss frequency and loss severity distributions.
Aggregation	– Simple correlation approach with predefined correlations between risk modules.	– Aggregation based on correlation matrix calibrated where possible to available market data or based on expert judgment in case no or limited data is available. – Aggregation model (Copula approach).

For Non-Life underwriting risk, there are only small differences in the risks covered by the internal model compared to the standard formula. As shown in the table above, the main differences between the internal model and the standard formula pertain to the modeling approach. For Life/Health underwriting risk, the covered risks deviate; the internal model covers both longevity risks for pension obligations for employees and a new-business shock for the expense risk, whereas neither of these risks are accounted for in the standard formula. All other risk categories under the internal model are also covered, if only implicitly, by the standard formula.

Another difference concerns the credit risk module: In contrast to the standard formula, the internal credit risk module covers the entire bond and loan portfolio, as well as credit insurance exposures. This allows us to model diversification and concentration effects across all credit-risk-bearing exposures.

We use a variety of data sources as inputs for the internal model and the calibration of parameters, as mentioned in the sections “E.4.2 Methodology underlying the internal model” and “E.4.3 Aggregation and capital add-ons”. The data used is deemed appropriate since we use available market data or own company data, wherever possible,

to ensure that the calibration of the model reflects economic reality as far as possible.

Whenever available, we use model and scenario parameters derived from historical data to characterize future possible risk events. If future market conditions differ substantially from the past, for example in an unprecedented crisis, the VaR approach may be too conservative or too optimistic in ways that are difficult to predict. Therefore, to mitigate reliance on historical data, we complement our VaR analysis with stress testing.

Where reasonable, the input data is identical to the data used for other purposes, such as for local GAAP or IFRS accounting. The

appropriateness of this data is verified regularly, both internally and by external auditors.

Market data is delivered by Investment Data Services (IDS) after performance of quality assurance based on criteria agreed with Group Risk. At IDS, the market data is collected from multiple sources, such as for example Bloomberg and Refinitiv. The necessary market data processing and enhancements are performed by IDS or Group Risk, and quality is assured by Group Risk applying the four-eyes principle. The market data resulting from this process is deemed sufficient and appropriate for use in the internal model.

The market risk model uses inputs such as investment data and market data. The internal credit risk model uses investment and exposure data (for example, nominal values, market values and maturities), obligor and counterparty data (for example, ratings, sector, and country information), parameter data (for example, probabilities of default, loss-given-default, and correlation data), as well as market data (for example, interest rates and foreign exchange rates). To ensure the appropriateness of the data used in the internal model, Allianz has established a control environment accompanied by internal guidelines, documented processes, and data checks. There is a regular model validation process to assess the underlying data and ensure it is appropriate for the calibration of the internal market and credit risk models.

In general, the internal model offers a higher diversification benefit, as it reflects the prevailing geographical diversification within a multinational Group, which is not adequately considered under the standard formula. This structural difference also affects the diversification within risk modules. In particular, the internal model accounts for diversification by country and sector within market risk sub-modules, something which is neglected in the standard formula calibration. Also, the diversification effects within market risk modules and sub-modules are deemed more appropriate given the long historical time series used for calibration, including the 2008 - 2012 crisis scenarios among others. One prominent example of the impact of this difference would be lower credit spread risk capital in the internal model, in combination with the dynamic VA offset for credit spread risk, which is only permitted in the internal model. Therefore, the quantitative impact on the overall SCR requirement based on the standard formula is generally higher than under the internal model.

Allianz is confident that the internal model approach is much better suited to represent its risk profile as a multinational Group.

E.5 NON-COMPLIANCE WITH THE MINIMUM CAPITAL REQUIREMENT AND NON-COMPLIANCE WITH THE SOLVENCY CAPITAL REQUIREMENT

Given our Solvency II capitalization of 209% as of 31 December 2024 and the stress tests conducted (as described in previous chapters), there is currently no indication of the Allianz Group's non-compliance with its Solvency Capital Requirement or Minimum consolidated Group Solvency Capital Requirement.

Allianz Group does also qualify as financial conglomerate subject to additional supervision under the German legislation implementing the European Financial conglomerate directive. As of 31 December 2024, the financial conglomerate capitalization ratio was 209%, its calculation being identical to the calculation of the Solvency II capitalization of the Allianz Group.

Allianz is well prepared to address potentially adverse future events due to our strong internal limit framework, stress testing, internal model, and risk management practices. In particular, we are carefully monitoring conflicts in international trade, as well as uncertainties created by shifts in the geopolitical environment. We manage our portfolios to ensure that the Group and its entities have sufficient resources to meet their solvency capital needs.

E.6 ANY OTHER INFORMATION

All material information regarding capital management has been addressed in the previous sections.

APPENDIX

SIMPLIFIED OVERVIEW OF THE ALLIANZ GROUP STRUCTURE

This overview is simplified. It focuses on major operating entities and does not contain all entities of the Allianz Group. Also, it does not show whether a shareholding is direct or indirect. This overview shows the status as of 31 December 2024.
